If he is not the most glamorous or the most shippery or the most culpable figure in the controversy over the Iran affair, Mr. McFarlane certainly ranks as the most enig-

matic player in the drama. The former Marine Corps officer was a man who seemed so intense and so tightly controlled that "you had the sense he was tied down to his desk by leather straps," a White House colleague said. And yet Mr. McFarlane lost control savagely in the suicide attempt that left him in Bethesda Naval Hospital under psychiatric treatment for two

He said he did not take an overdose of tranquilizers because he was depressed about talking to the Tower commission and other investigation committees, or because he was embarrassed before his family and friends by the public denunciation of his role in the Iran affair.

What really drove me to despair was a sense of having failed the country," he said. "If I had stayed in the White House, I'm sure I could have stopped things from getting worse."

"But how?" asked his wife. Jonda, who sat on the couch beside him during the interview. She cast her soft demurral in the context of what his psychiatrist has called his tendency to take too much blame.

The president didn't always listen to me," he told his wife, "but I could have relied upon others who did have influence with him. I

After an initial glare of blame, there has been a wave of sympathy for Mr. McFarlane because he talked to investigators while others refused to testify.

He told them a truthful version of events in the Iran affair to protect Mr. Reagan. But he has also evoked support because his person-al rise and fall is viewed as a classic Washington tragedy, complete with a tragic flaw.

I his is a very tough town, a ver inforgiving town," said an official in the Reagan administration who worked with Mr. McFarlane. "It catapults people, sometimes ordinary, well-meaning people, to the pinnacle of power, but let them make a mistake and they're de-

stroyed. And Washington takes great delight in watching them fall. "Bud's tragic flaw was wanting to be Henry Kissinger, to be at the vortex, moving planets and shaking continents, respected as a pro-found, strategic thinker," the official added. "He regretted his resignation from the White House moments after he did it, because he realized he would never get a shot

at achieving his dream." Mr. McFarlane said that friends in Washington and elsewhere had rallied to him and beloed in his

"You didn't fail me at all," the resident told him when he called his hospital room at the Bethesda Naval Medical Center. "It was a sensible goal to pursue and you shouldn't blame yourself because it didn't work."

Reflecting on events since he left the White House, Mr. McFarlane said he was deeply surprised by some of the behavior of Lieutenant Colonel Oliver L. North disclosed in the Tower commission report and suggested that he might have been a positive influence on the

"I always felt that with proper instruction and firm guidance, Col-onel North would do as he was told," Mr. McFarlane said. He said he resigned as national security adviser because he felt that, as a career military officer and

# U.S., Soviet Begin Talks on Missile Offer

# Shultz Visit To Moscow Is Considered

By Thomas Netter

GENEVA — The United States and the Soviet Union began talks Monday on a Soviet proposal for eliminating medium-range missiles in Europe as the Kremlin said that a visit to Moscow by Secretary of State George P. Shultz was "under consideration.

U.S. and Soviet officials here confirmed that negotiators at the Geneva arms talks had agreed to extend discussions of mediumrange missiles beyond Wednesday, when they were scheduled to adjourn, to allow time to study the Soviet proposal. That proposal was made Sanirday by Mikhail S, Gor-

Talks on long-range and space weapons are expected to adjourn Wednesday as planned.

U.S. arms control officials said that Washington was preparing a draft treaty on medium-range weapons to be submitted soon in

Senator Albert Gore Jr., Democrat of Tennessee, who along with six other senators met Soviet and American officials bere, said the new U.S. proposal would include verification provisions.

According to a Reuters news agency report from Moscow, Soviet officials said they believed that an agreement on medium-range missiles could be reached within six months. The Soviet officials quoted by the news agency also said that plans for a visit to Moscow by Mr. Shultz were being discussed and that such a visit could take place in about 10 days.

In Washington, a State Department spokesman, Phyllis Oakley, said that, although the administration had previously indicated a willingness to meet with Soviet officials whenever it was deemed belpful, there were "no plans at the moment" for Mr. Shultz to meet with Eduard A. Shevardnadze, the Soviet foreign minister.

To Erode Kadar's Grip By Jackson Diehl Washington Post Service BUDAPEST -- There are grow-

ing signs that the leadership of Janos Kadar, gripped by uncertainty in the face of a deteriorating economy, has entered a decline that could threaten Hungary's widely watched reforms of socialism and

tion as Hungary marked the 30th anniversary of the anti-Communist uprising and subsequent Soviet invasion that brought him to power. From the perspective of three decades, Mr. Kadar could boast of leading Hungary from an era of

political reforms that have made it one of the freest and most prosperous of Communist-ruled nations. Nevertheless Mr. Kadar's successes, and modest popularity among Hungary's 10 million people, have been threatened by sever-

and the resulting social unrest.

In the past six months, events have exacerbated the image of decline in Mr. Kadar's administration and contributed to what diplomats and political activists here said bas been a rapid fall in public respect for the leadership.

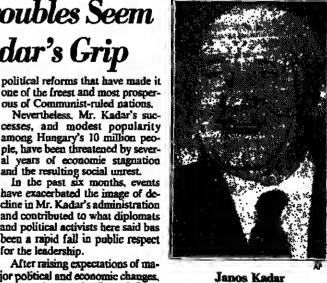

After raising expectations of major pobtical and economic changes, two meetings of the Central Committee of the Hungarian Socialist Workers' Party in November and December failed to outline a new strategy for economic recovery.

At the same time, a congress of the Hungarian Writers' Union, involving some of the country's leadparty officials, ended in an outpouring of criticism of the Kadar government and a repudiation of its political authority.

Perhaps most significantly, the seeming indecision in the top leadership over political and economie only 1.5 percent, while fiving stanpolicy has been accompanied by dards have stagnated or declined. the emergence of high-profile campaigning by several senior party officials seen as candidates to succeed Mr. Kadar.

"What I feel in the streets and pubs is that people are worried grew too weak and was tutored at home. Feb. 11 was about the future, they are disturbed," said Miklos Haraszti, an opposition writer and activist.

"The mood of the whole country is turning to discontent," he said. "It's become common wisdom that the country is in crisis and the gov-

Many Hungarian economists contend that strong action is needed to alleviate the country's mounting problems. Since 1968, Mr. Kadar's reform program has liberalized central control of the economy, adopted many principles ing intellectuals as well as senior of the capitalist marketplace and gradually expanded political free-doms while maintaining Communist Party control.

But economic production has been sluggish for six years, increasing at an average annual rate of

Last year, foreign debt increased by about \$1 billion, to more than \$6 billion, after a planned trade surplus of \$400 million turned into a \$450 million delicit. # **New Syrian Peace Plan** Supported by Gemayel

BEIRUT - President Amin Gemayel has agreed to three key points in a Syrian peace plan aimed at ending 11 years of civil war in Lebanon by giving Moslems a greater share of power, official sources said Monday.

They said the Maronite Christian leader had agreed to give up his cabinet voting rights and that the prime minister, traditionally a Sunni Moslem, would be elected by the legislature instead of being appointed by the president.

Mr. Gemayel, the sources said, had also agreed in principle to the abolition of the confessional system, the traditional power-sharing arrangement between the country's Moslem and Christian communi-

Under the confessional system, "But setting a date in advance major political posts and parlia- for abolishing confessionalism," he mentary seats are allotted according to religion. It heavily favors the Christian community, which has become a minority in Lebanon.

The official sources, who are close to Mr. Gemayel, said the three points had been agreed upon during more than two months of indirect negotiations between Mr. Gemayel and Syrian leaders.

The points were contained in the latest Syrian-backed plan, drawn up in Damascus by Lebanon's Moslem politicians and militia leaders in talks with top Syrian officials.

shid Karami said in Damascus the cities of Sidon and Tyre. accord would "lead us out of our impasse. But the sources close to Mr. Ge-

mayel said some proposed reforms

still remained to be negotiated. Sources say the latest peace pact resembles the accord signed in Damascus by Christian and Moslem Gemayel refused to approve it.

The 1985 pact also envisaged phasing out the Christian minority's prerogatives in order to give Moslems an equal share in the legislature and the executive branch of

# Ten years ago, we developed a unique operating system.

When these less-than-awe-inspiring pages rolled out of a typewriter ten years ago, even the authors wouldn't have believed that we were only a few years away from the Fortune 500. Or that Apple would be operating in over eighty countries.

The personal computer revolution was little more than a hobbyist's dream: something to muse about while hacking around in the garage.

The computer industry consisted of calculators the size of radios, and computers that resembled refrigerators. Apple was just a possibility, based on the unique idea that the power of computing should be available to individuals.

In five years everything changed. With the introduction of the first Apple computer a revolution began that put the power of mainframes onto the desks of ordinary individuals.

Personal computers entered schools, offices, factories and homes all over the world. We saw our concept of a "human standard" in technology become a reality. Today, that standard is called Macintosh.™

Although we hardly resemble the start-up company described in our first business plan, we still have the same vision:

Put the power of the world's most advanced technology in the hands of individuals. Make that power easily accessible to everyone. Make computers work the way people work, instead of the other way around. Create products that enhance the inherent abilities residing in all of us.

That's our goal, our dream, our mission.

In the last ten years that's one of the few things that hasn't changed.
Which is why we're still hiring absolutely outstanding people.

And giving them the support and creative environment they need to do absolutely outstanding work. And create truly great technological products.

That's been our system of operating since we opened the garage door.

And it will continue to be our system of operating as we push open
the doors of human possibility in the next ten years.

The power to be your best.

# Squeezing Out Rivals, Ortega Consolidates His Political Power

# Disintegrating Cash Was Key in U.S. Ploy

By Stephen Engelberg
New York Times Service

WASHINGTON - In early 1986, the Reagan administration put together a complex operation to rescue a hostage in Lebanon by paying a multimillion-dollar ransom with chemically treated bills designed to disintegrate after sever-al days, according to administra-

tion officials. The officials said the operation was on the brink of succeeding when the United States carried out its bombing of Libya on April 15. The hostage, Peter Kilburn, was reported dead days later by an Arab group that said it was avenging the Libya raid.

Lieutenant Colonel Oliver L. North, the White House aide who oversaw the ransom operation, felt crushed and he blamed the Central Intelligence Agency, saying it had dragged its feet, according to officials and documents reprinted in the Tower commission report.

As drawn up, the operation -which was not described in the commission's report --- was intended to be an elegant swindle that would free Mr. Kilburn, leave the captors with what an official called suitcase full of confetti," and lead to the arrest of the Canadian who was serving as the captors' representative in the deal.

Officials said the failed operation was an important case study because it was one of a series of incidents that convinced Colonel North to rely on private individuals

secret missions overseas.

In a separate development on Monday, Mrs. Aquino accepted the resignation of Agriculture Secretary Ramon P. Mitra Jr., the Philip-

pine news agency reported. Mr. Mitra was quoted as saying that he would campaign for the House of Representatives. Mrs. Aquino has said that cabinet and other official appointees who wish to run in the May 11 elections must step down by next Monday.

No replacement for Mr. Mitra was announced. His resignation is effective Thursday.

#### Drug Trial Begins in Malaysia The Associated Press

KUALA LUMPUR, Malaysia - The trial began Monday in Penang of Derrick Gregory, a 37year-old Briton, on drug trafficking charges that carry a possible death sentence. Mr. Gregory was arrested in 1982, a year before a law imposing mandatory death sentences in drug cases came into effect.

# Shots Fired at the Home Demjanjuk Randolph Scott, Who Appeared Of Mandela in Soweto

The Associated Press

JOHANNESBURG - Shots were fired early Monday at the home of Winnie Mandela, her law-

Ismail Ayob said no one was injured and it was not known who fired the shots at the Mandela house in Soweto.

Mrs. Mandela is a black activist who is the wife of Nelson Mandela, the imprisoned leader of the African National Congress, the main guerrilla group opposing South Af-rica's white-minority government. However, the government's Bu-

South Africa has severely restricted the reporting of unrest or dissent. Correspondents may be fined or imprisoned for failing to submit to censors articles that contravene regulations.

reau for information, in its account of the incident, said that policemen summoned to investigate a "public disturbance" at the house were fired on with an automatic weapon

by someone inside. The boreau said the officers apparently did not return fire and that whoever fired the shots from the house escaped. The bureau's report gave no indication who might have fired at the house and provided no details about the re-

Meanwhile, the Ministry of Law

and Order said Monday that 83 people died in police custody in South Africa last year.

Adriaan Vlok said in a statement submitted in Parliament that inquests had been completed in 43 of the deaths and that the police were not found to have acted improperly in any of the cases.

The 43 deaths included 12 snicides, 27 deaths by natural causes, one murder by a fellow prisoner and three instances where prisoners were shot trying to escape, he said. ■ Sweden Plans Sanctions

Sweden's ruling Social Demoa brutal Ukrainian guard known as "Ivan the Terrihle" who operated the gas chambers at Treblinka. Mr. cratic party authorized the govern-ment Monday to impose unilateral trade sanctions on South Africa, according to Prime Minister Ingvar Carlsson, Renters reported.

Mr. Carlsson said that the party had decided the need to fight apartheid took a higher priority than Sweden's traditional policy of only joining in sanctions voted by the United Nations Security Council. The full extent of the trade boy-

cott and when it would come into force was to be decided later. Sweden has long tried to isolate Mr. Rosenberg answered. "They South Africa economically, having frozen investments in the white-

ruled republic in the late 1970s. In the first nine months of 1986, Swedish exports to South Africa fell 29 percent from a year earlier to 559 million kronor (\$86 million). Imports fell 71 percent to 106 mil-

have done to me if I had tried to do

Last week, Mr. Rosenberg, 65, identified the defendant in court as the Ukrainian guard known as Ivan the Terrible.

Prime Minister Yitzhak Shamir sat in on the trial for about one hour Monday morning. The trial is being broadcast live on two Israeli radio stations and can often be heard in shops, buses and markets. During his second full day of

cross-examining the wimess, Mr. O'Connor noted inconsistencies in Mr. Rosenberg'a various accounts of Treblinka through the years, particularly relating to the date of his arrival at Treblinka.

Mr. Rosenberg testified that he reached the death camp in 1942, on the eve of Rosh Hashana, the Jew-ish New Year. Although the holiday usually fails on or around Sep-tember, documents show that Mr. Rosenberg told Israeli police in allies if U.S. companies were ex-1960 that he arrived in June 1942 cluded from the program, Penta-and in another 1961 statement said gon officials said Monday. that he arrived Aug. 20, 1942.

"I do not know the Gregorian date." Mr. Rosenberg said Monday. "There is only one date for the world to know — Erev [the eve of] Rosh Hashana."

#### Talking Politics? Don't Ride the Kenyan Buses Agence France-Presse

NAIROBI - Political discussions in Kenya's matatus, or

privately owned minibuses, have been banned, the head of the Matatu Vehicle Owners As-The association chairman

J.M. Nderi, said at a meeting of matatu owners Sunday that passengers found discussing sensitive political issues in the buses would be ejected and reported to the authorities.

Mr. Nderi urged the matatu operators to be alert for persons spreading rumors aimed at discrediting the government of President Daniel arap Moi. The action is one of a series

taken since the discovery in 1985 of a claudestine opposition movement known as Mwakenya, whose aim is to overthrow Mr. Moi.

More than 60 people have been convicted of involvement with Mwakenya and many more have been detained by police since a drive against the movement began last year.

# The Policy Is Still Bad

The Iran policy that was being served by the Reagan administration's offer of arms for hostages could not survive the twin blows of failure and disclosure. But the other large foreign policy issue treated in the Tower report is different. The Nicaragua policy that the administration meant to advance by its covert efforts to arrange financing for the contras is very much alive. Thanks to the support voted for it last fall by Congress, it is the established U.S. national policy. But, of course, it remains extremely controversial. Even before the Tower report, its opponents were determined to reverse it. The report now becomes ammunition in the policy war.

Should it? The National Security Council trampled all over propriety in steering funds to the contras during the two years when Congress was seeking, in the words of the Tower commission, "to restrict the president's ability to implement his policy." Whether the NSC also trampled legality is, for the commission, not so clear: The legal picture produced by congressional stric-tures is described as "highly ambiguous."

But the policy is no more invalidated by the wild tactics employed to sustain it in what were for the administration lean political times than it is validated by proper procedures used in easier times. Critics of the contras now argue in effect that the NSC staff's methods tainted the policy be-

youd remedy. Supporters respond that last fall's congressional approval gave the policy a legitimacy beyond challenge. Both of these arguments are weak. Finally, the policy has to be judged on its merits.

U.S. backing of the contras came into public view soon after it began more than five years ago. Since then, we have thought that this sort of intervention had heavy moral and political drawbacks. That remains our view. An emphasis on military operations was bad policy before the Tower report, and it is still bad. It helps the Sandinists mobilize Nicaraguan and interna-tional support against "Yankee imperialism." It commits the United States to a force of, at best, mixed political credentials and uncertain military prospects. It points Washington toward an unpalatable retreator-escalate choice not far down the road.

In the contras' ranks are democrats as well as holdovers from the old regime. Still, the best chance for keeping the democratic cause alive in Nicaragua remains the course of negotiation recommended by almost all of Nicaragua's fellow Latins. Only that course provides a common platform on which the United States and Latin Americans can join, as they must join for any policy to be effective, in containing the expansion of Sandmist power both within Nicaragua and within the region.

- THE WASHINGTON POST

# **Usurpation Exposed**

ft is no longer conjecture about the White House's "privatized" foreign policy. The details are as vivid as the unblushing memos in the Tower commission's report, as devastating as the flow charts showing how Lieutenant Colonel Oliver North squeezed secret donations from foreign clients for the contras. The documents portray a hidden, unaccountable group of individuals, knowing few limits, operating with arrogance and marching to folly.

Frustrations with democracy, it seems, led President Reagan to turn his National Security Council into a secret government. It launched some covert operations and concealed them from Congress, the State Department and even the CIA. In 1984, Congress cut off all U.S. funds.

military and "bumanitarian," for the Nicaraguan rebels, and thought that it had barred any enrity of the United States involved in intelligence activines from sup-. porting, directly or indirectly, any military operations in Nicaragua. This seemingly unambiguous curb was evaded by the White House on the specious claim that the law did not apply to the NSC staff. Colonel North, whom Mr. Reagan called a national hero, used this loophole and began raising millions from private and foreign contributors for what he called Project Democracy. His efforts, the report shows, extended to buying arms, supervising air drops and acquiring \$4.5 million worth of assets like ships and communications equipment.

One provocative operation was an airstrip in Costa Rica, built by a "Project

Democracy proprietary" as a contra supply base. When the president of Costa Rica, a exemplary democracy, threatened to expose the base, Colonel North, according to his own account, threatened him with a cutoff of U.S. aid. "You did the right thing," said John Poindexter, the national security adviser, "but let's try to keep it quiet."

Secretary of State George Shultz was not told of secret fund-raising ("I think it should stay that way," said Vice Admiral Poindexter). When pressed by the House committee on intelligence in August 1986, Colonel North denied giving any military advice to contras ("Well done," said Admiral Poindexter). As for CIA Director William Casey, a Poindexter memorandum advised Colonel North; "I don't want you to talk to anybody else, including Casey, except me about your operational roles."

It was a recipe for disaster, Congress was lied to. American envoys had no idea what secret understandings had been struck with governments they were dealing with. Incompetent fictions were used to cloak American involvement in the shipments from Israel of Communist bloc weapons via a Danish ship chartered by Colonel North.

There is no place in our democracy for personal secret operations and private foreign policies. Wisdom dictates reliance on experienced officials responsive to rules, written and unwritten. If any good is to come of the Iran-contra fiasco, it will be in the reaffirmation of law and limits on the president's authority.

- THE NEW YORK TIMES.

# **Bulgaria Off the Hook**

It is not so long since Bulgaria was widely suspected of having had an important role ing to American drug officials, the Bulgarians in Mehmet Ali Agca's unsuccessful attempt to assassinate Pope John Paul II. This supposition fed directly into the Reagan administration's whole early drive against international terrorism, which was known to have strong Moscow connections. ft was something of a surprise, then, to read recently that the number two man in the State Department, John Whitehead, was paying a courtesy call on Solia, as if the Bulgarian role had never even been thought to exist.

The fact is that although circumstantial evidence was highly suggestive, a Bulgarian role was not proved. A year ago an Italian court found insufficient evidence to convict three Bulgarians (and three Turks) who had been tried as the would-be assassin's accomplices. CIA Director William Casey is reported to have assigned his analysts to ransack the record and, when they failed to come up with a convincing measure of proof, to have accepted their findings.

The attention directed at Bulgaria in the Agea case did have some unintended posirive effects. That country's record of looseness toward narcotics and arms smuggling

ing to American drug officials, the Bulgarians began shaping up. Along with this came a measurable improvement in the uniting of families divided by the Bulgarian border, an end to the jamming of the Voice of America and some other political small change of the sort that the State Department customarily counts in deciding whether to turn American favor up or down on the countries of Eastern Europe. One still uncorrected flaw in this period was the terrible Bulgarian performance in persecuting its ethnic Turkish minority.

Meanwhile the focus of the administra-

ya, Iran and Syria and to the idea that the terrorism those countries conduct need not necessarily he attributed to a Soviet hand. Who can tell whether the truth of the 1981 attempt on the pope's life will be known? In any event, there was not enough to go on for American diplomacy to remain in indefinite suspension. The record on the more concrete is added to it, Bulgaria ap-

"linkage" - between their defense on the central front and the U.S. strategic arsenal

non's concern over terrorism moved to Lib-

pears to be off the diplomatic book. - THE WASHINGTON POST.

# **Other Comment**

#### A Vital Soviet Concession

The Soviet Union has removed the main obstacle not simply to arms control but to disarmament in Europe. Its position since Reykjavik has been glaringly illogical. It insisted on linking the removal of interme-diate-range weapons (INF) in Europe to cessation of the U.S. Strategic Defense Initiative. The two concerns are not related. The SDI has nothing to say about the defense of Europe. Mikhail Gorbachev's recognition of this is an important advance, and it should lead to the elimination of all SS-20, cruise and Pershing-2 missiles from the Continent and [Britain]. That would

reverse a buildup of arms in Europe which has been going on for more than a decade. Europeans must not allow the other

- to be a reason for impeding a smooth passage on INF now that Mr. Gorbachev has made the vital concession. Europe will never be wholly convinced that America will expose her cities for the sake of Europe. The Russians will never be convinced that she won't, and therein lies the doubt which sustains classical deterrence theory. But if the INF truce comes off, a powerful incentive will be given to Ronald Reagan and his successor to go for the deep cuts in strategic forces which were on offer at Reykjavik. At that stage, the balance of forces in Europe would be adjustable on a much lower level which brought in Soviet conventional as well as tactical nuclear strength. - The Guardian (London).

# **OPINION**

# Not Watergate, but the Moral Is the Same VASHINGTON—We know the story by heart. The president pre-election in a landslide, and us re-election in a landslide, and us re-election in a landslide, and us re-election in a landslide, and us resemble to the story by heart. This is the first of two articles: It is the first of two articles: It is the seems plotting together in secret, seemingly oblivious to the values that their president had espoused and their p

Abrams fairly boasted that such pri-

business and need not be looked into

because there was nothing illegal

about them. In other words, a private

foreign policy was fine.
Beyond Mr. Shultz and Mr. Wein-

berger, the administration is largely in runs. Donald Regan, the chief of staff, is ont. Michael Deaver, one of

the president's closest advisers during

W ASHINGTON — We know the story by heart. The president wins re-election in a landslide, and as he begins his second term he seems invincible. Overzealous aides, led by an autocratic chief of staff, plot stratagems to deal with perceived enemies at home and abroad. As the plans become more elaborate and dubious, the White House becomes obsessed with keeping them secret.

The secrets begin to leak out, as they inevitably do in a democracy, and the president's men try to cover them up. But the truth emerges anyway, in bits and pieces, in a way that is disastrous to the president's credibility. He fires a few aides who were most closely involved in the scandal. Then be fires his chief of staff. The gossip in Washington shifts to whether the president himself might resign.

The Iran affair is not Watergate, of course. There is not the same kind of clear criminality, and Ronald Reagan is not Richard Nixon. But last week, in the aftermath of the Tower commission's report, the two scandals seemed eerily alike. There was the same fascination and dread, the same sense of tawdry spectacle, the same sadness at watching a group of self-important White House aides put the rest of the nation through the wringer and turn a seemingly successful presidency from triumph to tragedy with astonishing speed. And it could get worse. By the time

the Iran affair runs its course many months from now, it may prove to be even more debilitating than Watergate. That is because there are so few people left in the administration who are not tarnished in some way.

Watergate had its villains, but it also had heroes. Elliot Richardson and William Ruckelshaus resigned rather than fire Special Prosecutor Archibald Cox. Henry Kissinger and James Schlesinger shielded national security policy from the tempest. Gerald Ford calmed the nation after Mr. Nixon's resignation.

Who are the comparable heroes in the Reagan administration? There are none. The Tower report notes that even though Secretary of State George Shultz and Defense Secretary Caspar Weinberger disagreed strong-

airstrip in Costa Rica - to drop "they simply distanced themselves from the policy" rather than resign. When a U.S. cargo plane carrying weapons into a country that the United States is not at war with and Eugene Hasenfus was shot down in expect that nobody will find out Nicaragua last October - an event. about it. And you cannot secretly sell that began to lift the curtain on the millions of dollars' worth of weapons extent of secret foreign policy — Mr. Shultz and Assistant Secretary Ellion to an avowed enemy of the United vate air forces were none of their in that way was beyond the powers

even of Ronald Reagan.

The Tower commission's report served the president on the National Security Council staff: Colonel North, Vice Admiral John Poinmarine lieutenant colonel. It offered

the first term, is on the verge of in-dictment. William Casey, the CIA director, has resigned because of a brain tumor. Robert McFarlane, the former national security adviser, has tried to commit suicide. Edwin Meese, the attorney general, faces questions about whether he conducted a prompt and thorough investiga-

Of the president's senior advisers, only Treasury Secretary James Baker seems untouched by the fallout. The arrival of Howard Baker as the new chief of staff will help, but probably less than the White House hopes. The tragedy for the Reagan administration is that no one remembered the lessons of Watergate that had been so painfully learned by the nation and another administration

less than 15 years ago.
Watergate demonstrated that there are clear limits to executive authority, and in particular to the ability of a president to conduct covert operations on questionable national security grounds. You cannot act secretly for very long in a democracy, even if yon are as energetic as Lientenant Colonel Oliver North. You cannot put tape over a door at the Watergate apartment complex in 1972 and expect that it will not be discovered

Similarly, you cannot create a private air force - with six planes, doztion they had pledged to serve.

Thanks to the Tower report, we

dexter and Mr. McFarlane, a former the nation a disturbing portrait of

can all look over Oliver North's shoulder and read his self-dramatizmg message traffic m the NSC computer system. We learn that he told extraordinary tales to the Iranians States and expect to get away with it.

Reversing the political laws of gravity whole weekend and prayed in decidwhole weekend and prayed in deciding whether to authorize Colonel North to say to Tehran: "We accept the Islamic revolution of Iran as a opened a curtain on what can only be fact." Another North story had Mr. described as the fantasy world inhabited by some of the military men who to the Iran-Iraq war on terms accept-served the president on the National able to Iran and that it was the Iraqi president who was causing the problem. Mr. Reagan later told the Tower commission that such descriptions

were "absolute fiction." The Washington Post,

# Testing Times for South Korea and Taiwan

HONG KONG — Asia's two fastest-growing newly industrialized countries, Taiwan and South Korea, face historic political transitions in the coming year. Presidents Chang Ching-Kno and Chun Doo Hwan must plan their successions while balancing competing political forces within and outside their ruling parties. Although Mr. Chiang does not face the potentially explosive street violence that Mr. Chun must contend with, he does have to convince politicians in power for decades to retire before he dies.

The present prospects for political reform in South Korea and Taiwan are mixed. This year and next dissent is unlikely to interfere with continued economic expansion. Nevertheless, the only means of ensuring long-term national security and economic development is to distribute power more broadly -- something that no political elite has gladly or easily done in the past. Taiwan is clearly better prepared to face these challenges than is South Korea, both because of the nature of their respective political milieus and because Mr. Chiang is in a stronger position than Mr. Chun.
Mr. Chiang has set the Nationalist Party, the

Kuomintang, on a course of political reform aimed at developing a pluralistic system—even-tually. Over the objections of old-guard conser-vatives, he has decided to end four decades of martial law and permit the rise of an indigenous political party. His hand also is clearly visible in

proposals to lift restrictions on newspaper publishers and to curb police powers of detention.

The Kuomintang will soon hold its 13th party congress and will resbuffle top party and government posts. In order to ensure the continuation of his reforms, Mr. Chiang must reinforce the party's progressive wing by promoting younger, better educated officials and retiring elderly, conservative members.

Two men represent the fortunes of the ruling party's progressive wing: Vice President Lee Teng-hui, a foreign-educated Taiwanese technocrat; and Education Minister Lee Huan, a party powerhouse with a deceptively modest title

P ARIS — The United States is a deeply conservative society and

will remain one long after the Reagan

the history books and the liberals are

conservatives, or neoconservatives, are not conservative at all. A comparison with Western Europe shows this.

and suggests why it is dangerous. The United States deserves a more serious

By David O'Rear

Upon Mr. Chiang's death, Lee Teng-hin is likely to assume a figurehead role as president. Decision-making making powers then would shift to the prime minister's office and to the highest party ranks. To ensure this, Mr. Chiang must put Lee Huan and other moderates in positions from which they can manage the succession.

In South Korea, the political situation is much more tennous and the prospects for a peaceful transfer of power are growing dim. The government and the main opposition New Korea Dem-

South Korea could learn about compromise from Chiang, who long ago mastered the art of balancing contending forces.

ocratic Party (NKDP), under the guidance of Kim Dae Jung and Kim Young Sam, are battling over revisions to the constitution. Mr. Chun's ruling Democratic Justice Party (DJP), with the support of the military and the bureaucracy, favors reducing the powers of the president and strengthening the role of the prime minister and the cabinet. The NKDP charges that the plan is designed to keep the opposition out of power, and is thus unacceptable. The real problem is that the two sides do not trust each other.

Unless the two parties can reach some sort of compromise, which now appears unlikely, Na-tional Assembly and presidential elections will be held in the coming year according to the existing constitution. The opposition would probably boycott them, leading to further street violence and possibly a return to martial law.

What is needed in South Korea is one of the

rarest political commodities: a selfless approach to national interests. The ruling party and the armed forces must recognize the opposition as reformers, not revolutionaries. If the NKDP can gain the support of a majority of the population, something Mr. Chun and the military have not been able to do, then the military should accept this as a step toward stability.

The two Kims, on the other hand, must

acknowledge that they symbolize domestic instability, which the military fears will incite a North Korean invasion. Their politics are based on a desire to claim the presidency and to drive the military out of politics. Confrontation, not compromise, rules their thinking. The government's first steps toward reconcili-

ation should be to curb the power of the police, release political prisoners and respect freedom of the press and assembly. In response, the NKDP should return to the National Assembly's ingness to compromise on the issue of direct presidential elections. Under fair elections, the opposition could gain a strong position in a parliamentary system of government. While President Chun has repeatedly empha-

sized his commitment to step down in February 1988 at the end of his constitutionally mandated single term, South Korea still lacks a reliable succession plan. If the two sides fail to resolve their differences this year, the radical fringe within the opposition will gain support and the government will feel obliged to reassert its authority through violence.

Mr. Chun could learn something about compromise from Mr. Chiang, who long ago mastered the art of balancing contending political forces. Mr. Chun, however, is likely to be in a position after retirement to offer support to his handpicked successor, or successors. Mr. Chiang, like all Chinese leaders, must die in office.

The writer is associate director, North Asia, for Business International, a private research organi-zation. He contributed this comment, which repre-sents his own views and not necessarily those of his company, to the International Herald Tribune.

# Real Conservatives Choose Legality Over Emotion

By William Pfaff

man has testified, they even were ately into deep debt on the theory, disproved in the event, that this would force the executive and Congress to cut back on federal spending. In short, these "conservatives" are actually very radical in their ideas and in their willingness to provoke drastic changes in society in the name of unproven ideas and a sectarian ideology. They really resemble nothing so much as those other social

Michael Oakeshott, the British

conservative philosopher, describes

nations as sailing "a boundless and bottomless sea; there is neither har-

bor for shelter nor appointed destina-

tion. The enterprise is to keep afloat."

That scarcely sounds like Ronald

Reagan, or even Irving Kristol. The most visible of American con-

servatives, the man who first made

Americans aware of what claims to

be a new conservatism, is William F.

Buckley Ir. He wrote a column (IHT,

Feb. 19) commending the efficiency

with which the Argentine military oli-

garchy of a few years ago ended ter-rorism. It "acquiesced" (note the weasel word) "in kidnappings, tor-ture and executions of those suspect-ed of conniving with [the terrorists]."

conservative movement than it now engineers of the recent past, the So-cialists, Communists and anarchists. The modern European conservapossesses, and certainly it needs it. European conservatism is pessi-mistic about history. It believes in tive is represented by such figures as the late Raymond Aron, a political analyst in a tradition which includes original sin, or in the secular counter-part of that idea: that mankind is fatally flawed, disposed to crime and cruelty. It holds that the institutions Tocqueville in France and Edmund of law and political order are fragile accomplishments of civilization, con-stantly at risk. It defends the estab-Burke in Britain and which is hostile to ideology and concerned with protecting not only liberty but also social lished order and distrusts change. justice. It regards civilization as fragile and distrusts radicalism.

America's new conservatives do just the opposite. They adore change and reject the past. They believe in political evil, certainly, but they look upon it as conveniently contained in a few locations, notably the Soviet Union, or confined to a political group, the left. They do not believe that society itself is irremediably flawed, but rather that it steadily progresses and that American society is a

kind of secular promised land.

They are thus deeply optimistic, at least about America; and they look to the future. They are willing to over-turn established institutions because of their confidence in making everything better. Thus they are enthusiastic about dismanting government, deregulating commerce, breaking up great corporations. As David Stock-

Mr. Buckley proposed creation of willing to push the country deliber- a new international anti-terrorist agency to apply the Argentine meth-od, so as to produce "the extinction of a species," the terrorist species, by killing them, by posting bounties for delivery of them dead and by causing "the gradual economic asphyxiation, pending political sanitation," of "prohibited zones" such as Lebanon,

nere terrorist bases exist. but a form of rightist radicalism, pre-pared to disregard or destroy the established norms of international conduct in order to deal with a peculiarly repugnant but nonetheless ephemeral phenomenon, international terrorism, that in terms both of lives lost and of real political consequences is objectively trivial. Mr. Buckley concedes that his plan, for Americans,

"raises constitutional problems." It raises problems more serious. than constitutional ones. It always has been hard to take American conservatism seriously precisely because of its failure to grasp the radical im-plications of the things it so innocent-ly proposes, or indeed does. Under Mr. Reagan's presidency it has attacked other countries, attempted to kill their leaders, tried to overthrow other governments, authorized sub-version and kidnappings, and might even do the things Mr. Buckley proposes, without ever grasping how all of this contributes to the moral subversion as well as the institutional breakdown of international society.

Lord Acton, the great 19th century historian, who was truly a conserva-

tive, said of this idea that law and

moment, that "the fate of every democracy, of every government based on the sovereignty of the people, de-pends on the choice it makes between these opposite principles, absolute power [to popular emotion] on the one hand, and on the other, the restraints of legality and the authority of tradition. It must stand or fall according to its choice." One would like to introduce Lord

Acton to Mr. Buckley and the "conservatives" of Mr. Reagan's White House. But they would not understand him, and he would undoubted-ly be astounded by them. International Herald Tribune.

# Ladyship

By William Safire

WASHINGTON — At a time when he most needs to appear strong President Reagan is being weakened and made to appear wimp-ish and helpless by the political inter-ference of his wife.

Nancy Reagan's campaign to force her husband to fire Donald Regan as White House chief of staff has been crowned with success. With extraordinary vindictiveness, the first lady issued a glocful victory statement

when her target was brought down.

Donald Regan's sin, in her eyes,
was to have joined the vice president and the CIA director in supportingthe president's decision to trade arms for hostages: when that Reagan decision turned out to be a disaster, the chief of staff had to suffer a scapegoat's humiliation.
His more immediate sin, in the

view of the power-hungry first lady, was in pressing the president of the United States to get off his duff and show the people who elected him that he was on top of his job.

The first lady, advised on matters

of credibility by a foreign agent about to be indicted on four counts of per-jury, disagreed. She objected to the idea of having her busband, at 76 and recently hospitalized, stand up without a script and subject himself to hostile questions on the embarrassing Tower commission report. "Have your damned news conference!" she shouted at the chief of

staff in a fit of temper two weeks ago. slamming down the phone and sealing his doom. Of course, there is to be no news conference; that would be a test of the president's grasp of the crisis. Instead, an outside speech-writer approved by Mrs. Reagan will package the president's mea culpa in a rehearsable way that will prove only that his eyes and voice are working. I hold no brief for the imperious Don Regan; that shovel brigadier-grabbed for the glory and deserves his share of the blame. But at least he understood that this was the time for an unvarnished demonstration of bravery by the man in the arena. He thought the president still had all his marbles and would gutsily rise to the occasion; but the top of the henpecking order evidently thought not.

What Nancy says goes. This is not Rosalynn Carter, "the Steel Magno-lia," stiffening her husband's spine; this is an incipient Edith Wilson, unelected and unaccountable, presuming to control the actions and appointments of the executive branch. Mrs. Reagan has a coterie of media biggies in whom she regularly con-fides; they passed on her drumfire of criticism of a staff chief who dared to refuse to defer to her advice. She was then able to display the ensuing reports to the president as evidence that his chief of staff had become

an intolerable burden. On matters of patronage, she has been a powerhouse. Through her best friend, Mary Jane Wick, she controls jobs, trips and honors at the USIA, and is arranging a post-administra-tion Reagan social presence in Washington by replacing Roger Stevens with Charles Wick as head of the Kennedy Center. She has been all too interested in appointments of ambassadors. The suspected manipulation of these appointments by Michael Deaver for his private benefit is presumably under grand jury review.

Supported in her power playing by a bloated, expensive East Wing staff,

she is the costliest "volunteer" in the budget. Taxpayers have no recourse: The First Ladyship is the only federal office in which the holder can neither be fired nor impeached.

Just as every president, man or woman, is entitled to a helpmeet,

every taxpayer is entitled to some ities of an executive power center. We are forced to abide by Mrs. Reagan's decision to exhibit her busband only under TelePrompTer glass, but we can ask for a news conference with the power behind the throne.

Starters: Did you urge the president, after meetings with hostage families, to do anything to win their release? When did he first inform you of arms transfer pleasing? of arms transfer planning? Do you have any notes or tapes that might help a prosecutor discover the origins of such planning? Would you be willing, as the president is, to show some of those notes to investigators? Was the president aware of your calls to the media to undercut his chief of staff and did he ask you to stop? And did you discuss patronage with Mr. Deaver after he left the White House? With questions like that in the offing, we might never have our "damned news conference." But don't sell Nancy Reagan short: She may be tougher than she lets her

husband appear to be. The New York Times

1912: Troops to Peking 1937: Italy to Compete
PEKING — Both Yuan-Shih-Kai ROME—Facing up to Britain's \$7 ROME - Facing up to Britain's \$7.5 billion rearmament program, the Fascist Grand Council in a communique [on March 2] recognizes that the world armament race has begun in earnest, with no hope of limitation. Italy will try to compete, says the Grand Council, but the public is warned frankly that this may mean "total sacrifice of civil to military needs." Fascist leaders then justified further draconian efforts to keep pace by the suggestion that "less en-dowed nations" must mobilize science and valor "to resist eventual aggression of countries rich in capital and natural resources." Thus Italy, where militarization already has imposed a heavy tax burden on the people, lays down its challenge to the rearming democracies whom it has

## LETTER TO THE EDITOR

#### Alone, a constitution means little or **About Courts-Martial**

Regarding the opinion column "Time and Truth Make an Essential Case for Court-Martialing Poindexter, North" (Feb. 19) by Arthur J. Goldberg:

As the indge advocate, United States Army, Europe, I have no role in the investigation or decisions being made concerning Vice Admiral John Poin-dexter and Lieutenant Colonel Oliver North. However, since many military members stationed in Europe read your newspaper, I consider it appropriate to correct several inaccuracies pertaining to the Uniform Code of Military Justice.

now, it can be expected to work in the Mr. Goldberg inaccurately states that future. This is the faith of experience. President Reagan, as commander in chief, may "order" the secretary of the Faith, and self-interest — almost all navy to bring general court-martial pro-Americans know they breathe free under the Constitution, and that is among the greatest of self-interests. ceedings against both officers. Although under article 22 of the uniform code the And of course the knowledge that for president may convene general courtsmartial, he may not direct a subordinate convening authority, such as the secreare many more in government and out tary of the navy, to do so. Under article 37. commanders and convening authorities may not coerce the judicial acts of Is this sentimental? Yes, since belief in freedom is certainly a sentiment. Is it any subordinate authority.

Mr. Goldberg also is inaccurate when he states that the "members of the courtmartial" are authorized to grant use immunity and to compel the two officers to testify. The rules for courts-martial specifically provide that only a general court-martial convening authority may grant immunity, and that this authority may not be delegated. The members of a

court-martial (who are similar in function to civilian juries) have no anthority either under the Immunity Statute or the Uniform Code of Military Justice to

By DANZIGER in The Christian Science Mc

grant immunity or compel testimony. In Mr. Goldberg's discussion of use immunity, he implies that Admiral Poin-dexter and Colonel Nurth could he compelled to testify at their own courtsmartial if granted use immunity. This is erroneous, since the Fifth Amendment to the Constitution of the United States guarantees that no one can be compelled to testify against himself in his own trial. This protection applies to trials by court-martial. Use immunity is granted to compel a witoess to testify at another person's trial. The immunity then protects the witness from prosecution based on information derived from his testimony. It should also be noted that, in cases subject to possible trial in U.S. District Courts, a convening authority cannot grant immunity without the approval of the Department of Justice,

Again, let me emphasize that my comments are not intended to address the political questions surrounding this affair, but merely to correct any misperceptions that Mr. Goldberg's article may have created concerning significant provisions of the uniform code,

I make these comments in an unofficial, private capacity.

RONALD M. HOLDAWAY, Brigadier General. Headquarters, U.S. Army, Europe, Heidelberg, West Germany,

# They March Grandly Past Catastrophes

WASHINGTON — A shiver ran down my spine as I rounded the corner of the Place de la Concorde to see the flag-bedecked Champs Elysées. The sight of the outsize French tricolor framed by the Arc de Triomphe at the end of the magnificent tree-lined avenue made me feel like chanting "La Marseillaise." For a few, fleeting moments, I shared the French illusion of Paris as the fulcrum of the civilized universe.

Living in France for four years can have a strange effect on a foreigner. The sensations were particularly strong in my case because the experience challenged many of the assumptions with which I have been imbued since birth.

I am an Englishman, the product of a nation that shares many similarities with France — a rich literature, a glorious past, a deep-rooted attachment to democracy — but differs from its crosschannel neighbor in one crucial respect. While England has come to accept its declining influence in a world dominated by the superpowers, France remains preoccupied with its own greatness.

Of course, when it comes to impress ing outsiders with pomp and circumstance, we Brits are also quite accomplished. The pageantry of ceremonies like the Trooping of the Color or the State Opening of Parliament is every bit as impressive as the annual military parade through Paris nn July 14 to commemorate the storming of the Bastille. And Republican France has nothing to match one of our royal weddings.

What the French have that we British lack, it seems to me, is inner conviction. When the queen's horse guards parade down The Mall outside Buckingham Palace, they are carrying on a colorful, centuries-old tradition. But when France's foreign legionnaires swagger down the Champs Elysées, swaying from side to side in their white leather aprons, they look as if they have just come back from fighting a battle in the desert. Watching them, it is possible to believe that France really is a force to be reckoned with in the modern world.

The comparison between France and Britain is instructive because it illustrates diametrically different ways of reacting to loss of empire. Britain may not have found a distinctive role to play in the world, to use Dean Acheson's taunting phrase, but it has developed a comfortable enough niche as a secondclass power in the shadow of the United States. France, on the other hand, asserts its national identity by boasting about its global presence and resisting the domination of the superpowers.

The French obsession with grandeur may seem pretentious, even ludicrons to self-deprecating Englishman. What failed to appreciate before living in France is that it serves an important internal purpose. Here is a nation that has suffered five military catastrophes in the past 120 years: defeat in the Franco-Prussian war in 1870, a tremendously costly victory in World War I, collapse in 1940 against Nazi Germany, retreat from Indochina in 1954 and the loss of

By Michael Dobbs This is the first of two articles.

Algeria in 1962. Grandeur has been a way of forgetting these traumas.

It is difficult for someone brought up in a country that has never experienced a violent revolution and has not been occupied by a foreign power since 1066 to understand the Frenchman's inborn sense of insecurity. Grandeur is the glue that has traditionally held this incredibly diverse nation together: a majestic spectacle choreographed by the central authorities to distract the populace from thoughts of revolt.

The technique was perfected by Louis XIV, who dazzled his subjects into sub-

#### MEANWHILE

mission. By creating the most magnificent court in Europe at Versailles, the Sun King won the loyalty of rebellious barons who would otherwise have spent their time plotting against the crown. The fashion-conscious noblemen were persuaded to compete against each other for minuscule favors from the monarch.

But it was Charles de Gaulle who provided the best explanation for grandeur. In his memoirs, the man who restored France's self-esteem after World War II described his country as a land "created either for complete success or exemplary misfortunes." France, he declared, needed to embark on "vast enterprises" in order to counterbalance its internal divisions and external threats. In short, he said, "France can-

not he France without grandeur." At school in England, we were brought up to feel a kind of effortless superiority over the French. Sure, their historical roots were as deep as ours, and we were obliged to concede that their cuisine was superior, but we won most of the battles. When we weren't clobbering them ourselves at Agincourt, Trafalgar or Waterloo, we were helping save them from clobbering by the Germans.

French may have been the language of diplomacy and love, but it was pretty impenetrable to me at age 16. Our teacher, a crusty character named Bertram Bradstock, made clear that speaking French was an unnecessary luxury: Forcigners were expected to speak English. The point of the whole laborious exercise was to pass a exam known as the General Certificate that would enable us to continue studying some sensible subject such as Latin or medieval history,

It thus came as a surprise to arrive in France and discover that in many respects they were doing better than we. In February 1983, I spent a month in the provincial town of Besançon, trying to turn my schoolboy French into real French. Standards of shops, transportation and public amenities compared favorably with Britain. The lower middleclass French family we stayed with seemed to enjoy a higher standard of living than their English counterparts.

Although France has its depressed

regions, it has no equivalent of the in-dustrial wasteland that stretches across much of northern England. There are few places in France quite as desolate as the inner cities of Liverpool or Manchester, the epicenter of the world's first industrial revolution. France, which was a predominantly rural country until World War II, has adapted much more easily than Britain to the demands

of a new technological age.

Returning to England, I was often struck by the insularity of my fellow countrymen. After the somewhat stiff refinement of Paris, London seemed like a strange planet, inhabited by people with grating accents and shabby suits. Compared to the aloof and volatile French, the English seemed kindly and extraordinarily eager to avoid giving of-fense. The American writer Paul Theroux once defined an Englishman as someone who apologizes if you tread on his foot. A Frenchman could be defined as someone who expects you to apologize if he treads on your foot

There is a formality about life and a preoccupation with keeping up appearances that does not exist in Britain. In England, you are addressed as "duckie": in France, as "monsieur." If the French are trying to explore someone's charac-ter, they ask: "Est-ce qu'il est brillant?" Does he sparkle? Brits are more likely to ask if someone is solid or reliable.

Many of the differences hetween

France and England, it seems to me, can be boiled down to a different attitude toward ideas. The French have a passion for ideas, the more brilliant the better. They splash them across the front pages of their newspapers, relegating the dull, prosaic facts to the inside. Intellectuals, people whose business is ideas, are regarded with special reverence as the moral conscience of the nation. In England, the term intellectual is regarded with suspicion, even amusement. There is no real intellectual class.

People who regard facts as of secondary importance can, of course, make big mistakes. A generation of French intellectuals followed Jean-Paul Sartre in viewing the Soviet Union as the beacon of international progress. This was followed by an equally irrational admiration for Mao Zedong and Ernesto "Che" Guevara. After discovering the Gulag 15 years later than everybody else, many French intellectuals have swime to the opposite extreme. Their heroes are now President Ronald Reagan and the Austrian economist Friederich von Hayek.

The writer, formerly The Washington Post's correspondent in Paris, now reports from Washington for The Post.

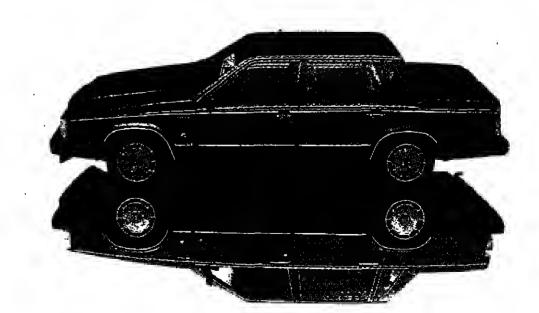

Letters intended for publication should be addressed "Letters to the Editor" and contain the writer's signature, name and full address. Letters should be brief and are subject to editing. We cannot be responsible for the return of unsolicited manuscripts.

# NO SURPRISE.

There are moments in your life when the least you need is a nasty surprise. Like when you turn the key at five on a freezing February morning. Or when you hit a hairpin bend just a bit too fast. Or a stray dog seems too valuable to ignore. Or fierce braking saves your life when

overtaking a truck just before the crest.

We build Volvos to perform exactly as you expect. We may call it Reliability. We may call it Dynamic Safety. You will call it driving pleasure.

# ARTS/LEISURE

# Fame-Feeding At Mortimer's

NEW YORK — The food is what New York critics call plain sort of way: crab cakes, cheesecake, coleslaw and so forth. The place - brick walls, wooden floors - is about as decorated as a dered. barn. But mention Mortimer's around New York's chic circles and watch people drop dead.

At Lexington Avenue and 75th Street, Mortimer's is a new and brighter version of 21 - a club. All the beautiful people are there - an incredible mixture of Henry and Nancy Kissinger, Pat Buckley, Os-car de la Renta, Estée Lauder, Ann

#### HEBE DORSEY

Getty and Jackie Onassis. Even Greta Garbo. Being there is like attending the most glamorous house party in town. The best story about the place is that the realestate tycoon Alfred Taubman bought Sotheby's so that he could meet the queen and get a table at

Nobody who is not faintly fam-ous should even try going there. Which is precisely what Glenn Bernbaum wants. Bernbaum is Mortimer's owner, its raison d'etre, and he has made it his hobby as well as an extension of his own

"I wouldn't stay in business if I didn't have the type of client I have," he said, in a recent interview. "I'd just walk out of the door and close it. A club? Yeah, I like the idea. The thing I've enjoyed the most is the personal relationship

Pve had with my clients."

also organizes private parties and works on them as if they were his own. He worries about the menu, "plain." Frankly, it's boring, in a the tableware, the flowers, the balloons. He can get so carried away that he once got stuck with a \$6,500 flower bill a customer had not or-

> "Really, it's amazing," said the socialite Nan Kempher. "He asks you how you want it and then he does it better than you could have done it. I mean, he's terrific."

The designer Carolina Herrera and her husband, Reinaldo, once gave a party there for Princess Margaret. Alexander Liberman, the editorial director of Conde Nast Publications, recently told Bernbaum: "I've never given a party in a restaurant before. And I want you to know that from now on anytime we're over 25, we're

going to have it at Mortimer's."
"It's very gratifying," Bernbaum
added. "More important than

It is not easy to capture, let alone keep, such a clientele, but the ec-centric Bernbaum can say dreadful things with a twinkle in his eye and be outrageously candid - which may explain why be, and Mortimer's, slowly grow on you. He is a master power broker who makes his own rules.

the point of owning a restaurant if I couldn't hold tables for friends? Yes, I'm afraid I have antagonized people. If anyone is critical of where they sit, I suggest they take their business somewhere else."
Except for Saturdays and Sun-

Bernbaum, 62, an elegant man days, when the place turns into a tomers are favorite, some are more to his own apartment, with a great deal of personal style, zoo, lunches are slow but dinners favorite than others. Oona Chaplin How does one crack into this

C OLOGNE—The Wallraf-Richartz Museum is showing a surprising glimpse of Paris. Architectural drawings, often sumptuously handcolored, show the evolution of the Champs Elysées, Concorde and the Etoile, the Gare du Nord and the Bois de Boulogne. Those landmarks radiate an urbane elegance that seems unmistakably French. The surprise is that all are the work of a German architect named Jakob Ignaz Hittorff, who became Jacques Ignace in France.

Born in Cologue in 1792, the son of a prosperous builder, Hittorff seemed content to follow in his father's footsteps. On-site training was supplemented by theoretical study, and the apprentice quickly established lished his credentials. He designed stout villas for the stout, new-rich burghers of Cologne and was launched on a conventional career when the allure of Paris became too strong. He was just 18.

The newcomer enrolled at the Ecole des Beaux-Arts and immersed himself in the progressive ideas coursing through the Bourbon capital. He was soon designing Memus Plaisirs for the court — settings for balls and baptisms, weddings and coronations. The Rhineland prodigy was also honored by purse-heavy private commissions.

Again he interrupted his success — this time to study in Italy, where he whetted his form-language by sketching countless Roman temples and villas. Then to Sicily for archaeological research. Returning to Paris, he became one of the first defenders of the polychrome theory of classical architecture. His lectures and writings were so influential that Lord Eighi-invited him to inspect the souvenins carted bome from the Parthenon.

The decline of the Bourbons brought only a brief retard in Hittorif's career. Under Louis Philippe he realized his most majestic project—to give a new, unified shape to the Champs-Elysées and Place de la Concorde. Hittorif described the latter, then known as the Place Louis XV, as "the most described and visually disturbing scene in the city." Anthorities had reviewed scores of proposals, issued prizes and proclama-tions, then repeatedly stalled over details. In the midst of the middle, Hittorff presented his uncompromising vision of the site. He was determined to put the great obelisk of Luxor, on its way from

Egypt, at the center of the place — as a visual anchor and historic emblem. Placement of the antiquity — on a base of bronze or granite, tall or short, with or without sphinx-like ornaments, with or without a bronze cap for the obelisk (and that with or without a gold-leaf icing) — was at once a cause celebre and a comedy of errors. Hittorif finally had his way. He designed many of the facades along the Champs-Elysées, along ice cream stands. He would have extended the Genomikumstwerk beyond

with restaurants and coffee houses, casinos, a panorama, a circus — ever Place de l'Etoile had he not encountered resistance from the prefect, Georges-Engène Haussmann, who is often credited with many of the urban innovations Hittorff proposed. The bureaucrat triumphed over the artist, and the decorous development of the Bois de Boulogne was abandoned. Nonetheless, the area bears traces of the German's concept.

The strife with Baron Haussmann brought the only serious setback in Hittorff's long career. He consoled himself with building the church of Saint-Vincent-de-Paul. Here, too, he realized his ideal fusion of the arts

—sculpture, painting, glassmaking, weaving — with architecture. But his polychrome applications provoked the parishioners' wrath. Painted tablets of saints, originally installed in the neoclassical porch, were removed. His enterprise was one sign of his faith in technological solutions to traditional problems. He embraced the opportunity to build a new Gare do Nord, at a time when most of his contemporaries saw such industrial structures as beneath contempt. Historif began work on his "Temple of the Steam Engine" in 1861, and completed it within five years.

When he died on Christmas Day, 1867, the French press lauded. Hittoriff's monumental achievements, as well as his role as unofficial cultural ambassador between Germany and France. That his reputation slumbered for so long in dusty archives has much to do with the streamlined century's contempt for neoclassical excess. That oversimplified view is now being modified — in large part, thanks to the waxing interest in architectural drawings. With assistance from Paris's Musee Carnavalet, Cologne's curators sifted their vast holdings of Hittorff drawings and produced a fresh view of the past. The exhibition, which has already appeared at the Carnavalet, runs through March 22.

# Lesson in Laptops 14

For journalists, portable computers conjure up an image of a brave new world, but the reality is not always beguiling.

# Electronic Trading 12

Wall Street's triple-witching hour has focused attention on bow the computer has revolutionized the securities business. But brokers, traders, stock exchanges, institutional investors and major brokerage houses have been prime beneficiaries of the technology.

# Innovative Images 10

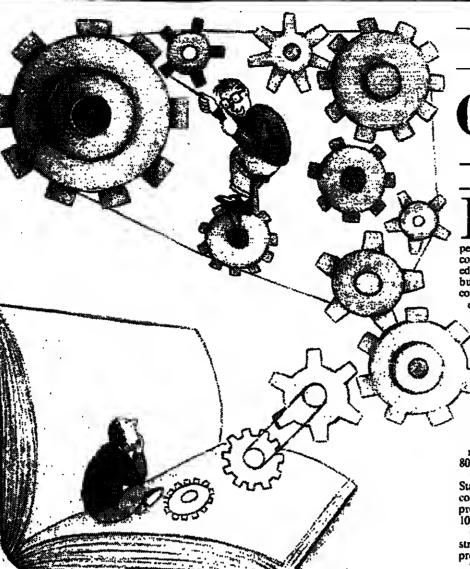

The Danish company UNIRAS has emerged as a pioneer of previously uncharted paths in high-quality color graphics software. Among its products, geological mapping and automobile engineering.

# IBM's Big Blues

IBM, the world's largest computer company, has seldom faced such chill and cloudy times. For the first time since the Great Depression, the company has endured two consecutive years of earnings decline. Although IBM remains the most profitable company in the world, it now seems as concerned with managing its costs as it does with expanding into new markets.

#### Campus Anxieties 15

The advent of computers and related technologies has reawakened old anxieties on American college campuses.

Cost Consciousness

# Coming Soon, Disposable PCs

#### By Amiel Kornel

ARIS — The computer industry is bracing for the arrival of the throwaway personal computer. Like the ball-point pen and the paper clip, the personal computer is becoming a disposable commodity. Plummeting prices and an expect-ed quantum leap in technology are motivating businesses to justify the costs of computer investments in terms of months rath-

er than years. There are people who believe the technology is moving so fast that they say, 'Let's buy a cheap one and when the super PC comes ... we can throw it away," said Gordon Curran, con-sultant at the Paris-based market researcher Intelligent Electronics. Made-in-Asia personal computers

using standard technology are driving down prices and challenging the hegemony of the better-known brand names, while buyers await more powerful machines built around Intel Corp.'s new 80386 microprocessor.

Business users in Europe and the United States are revising procurement policies as computer prices at the bottom end of the professional product range drop more than 100 percent to less than \$700.

Computer makers and distributors are struggling to adapt as the price war erodes profit margins and eats into market share. "Many companies in the U.S. are waiting for

the 386," said Christine Hughs, vice president at the market researcher Gartner Group Inc. in Stamford, Connecticut. "Buyers will just buy [cheaper machines] for short periods," predicted Mrs. Hughs, adding, "This will have a negative impact on IBM."

IBM Corp., the U.S. computer giant that leads the worldwide microcomputer market,

## Expectations of a leap in technology have created uncertainty.

saw its market share slip last year because of the price war, according to many analysts.

Intelligent Electronics, which expects to release its annual report on the European personal computer market at the end of March, estimates that IBM's share of the European market dropped from more than 33 percent of the units sold in 1985 to 27 percent in 1986. It says the total European personal computer market grew 40 percent in 1986, and predicts

that growth will slow to 27 percent this year.
"IBM market share has slipped solely because of the bottom end of the market," said Mr. Curran. "They're losing out to the cheaper market." He said, nonetheless, that IBM's share of the market for the more expensive and powerful PC AT-type machines was growing and would continue to assure the company an

increase in total microcomputer revenue. Price cutting alone does not tell the whole story. Despite similarly descending costs, consumer electronics markets, for example, are not characterized by rapidly shortening purchasing cycles. Buyers of televisions and hi-fi's, faced with a relatively stable technology, are under much less pressure to renew their investment regularly.

In the business computer area, however, companies often feel they must keep pace with technology to remain competitive. Expectations of a generational leap in microcomputer 'technology, and a steep decline in prices during the past year, are creating a period of uncertainty in which many users are thinking of amortizing personal computer investments over a period of 18 to 24 months.

The phenomenon may be a quirk in a market where users, having access to stable, standardized and ever-cheaper products, are awaiting the arrival of a new, more powerful technology that is likely to transform their performance expectations.

That technological leap will come from In-Continued on page 13

# Crime by Computer: Experts Grapple With the Laws

#### By George Gudanskas

ARIS - As the industrial world's dependence on computer technology grows, legal experts and legislators are focusing new attention on computer crimes and the need for international solutions to their border-hopping manifestations.

Broad solutions are needed, experts argue, because most Western industrial nations are relying on computer systems in almost every aspect of business and public life - from

preparing balance sbeets, trading stocks and bonds and storing and retrieving information, to directing air traffic and tracking space satel-

Yet, most of these same nations have few, if any, effective measures in place to repress illegal, unauthorized or unethical use of computers across their frontiers, a growing threat as telecommunications and computer systems encircle the globe and access to them becomes as easy as placing a phone call.

"If you have a computer and you have a telephone, you can really operate all over the

world," said Hans G. Nilsson of the Council of Europe, which has begun studying what he described as "the transfrontier character of omputer-related crime,"

Mr. Nilsson said a panel of experts was examining for the 21-nation council whether existing conventions might cover some of the problems that can be encountered, including what police authorities should investigate and whether a person who bas committed a computer-related crime can be extradited. The group meets next in April.

Since its beginning in 1949, the council has

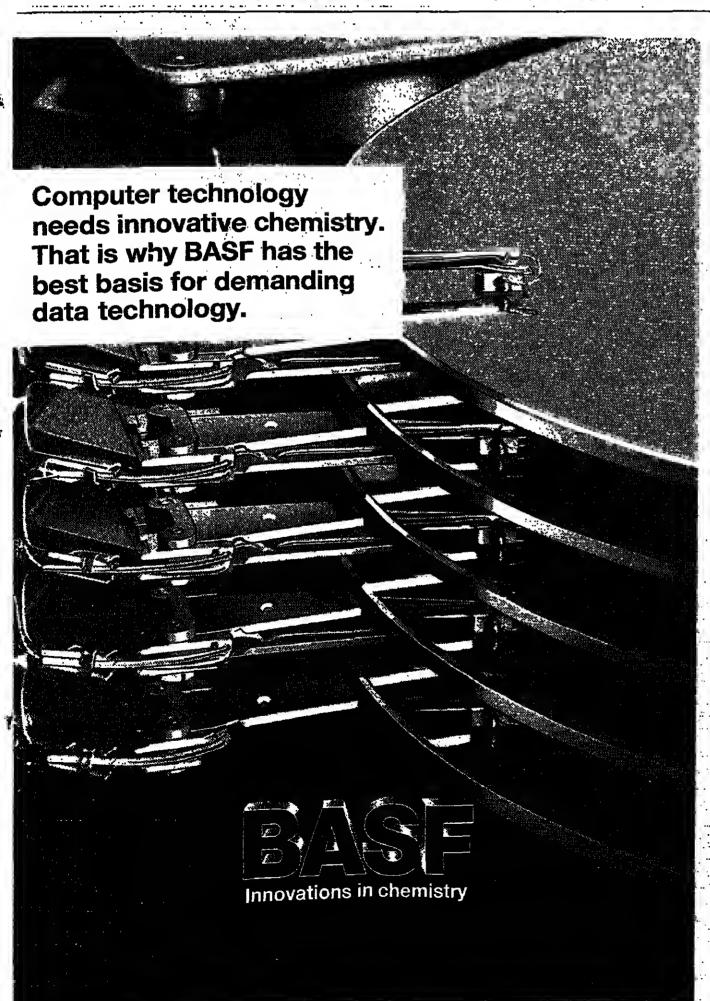

concluded more than 115 conventions and agreements in an effort to harmonize national laws and put member nations on an equal legal footing. In the case of computer crime, the council's goal is to establish guidelines that will help countries focus on the problem and steer national legislators in the same direction.

The group of experts is using as its foundation an important report released last year hy the Organization for Economic Cooperation and Development.

The 71-page report, considered the first in-

ternational examination of its kind, analyzed legal policies developed in various countries to combat computer-related crime. The OECD's. authorities defined a computer crime as "any" illegal, unethical or unauthorized behavior relating to the automatic processing and transmission of data." Among the offenses they identified were fraud through computer manipulation, computer spying and piracy of programs, sabotage of computers and unauthoized access to systems.

Continued on page 12

Before data can be processed electronically, they have to be stored: on tapes, hard disks or floppy disks.

With the development of the audio tape - the first magnetic storage medium of all -BASF Research paved the way.

And today too, BASF is a major source of initiative in aiming for particularly effective data utilization.

An example of this is one achievement by BASF concerning the new generation of microcomputers: a newly developed thin-film metal disk and scanning technology specifically developed for it make up an optimally matched high-tech system of extremely. high performance.

It offers the advantage of a higher storage capacity with extremely fast data access. and teamed up with distinct reliability and operational dependability.

This is ideally complemented by BASF's know-how with raw

View looking into the especially compact 94 megabyte storage unit from BASE.

materials, coating technology, mechanics and electronics.

The result is a progressive approach to problem solving to the benefit of users.

A leading position is held by BASF in the data technology market, both in the area of storage media and in compatible mainframe EDP systems. With worldwide activities and production works in several countries, in 1985 sales of over DM1 billion were achieved in this field.

Modern computer technology has two important aspects for BASF: one is the growing significance of this market in the future, the other is the great scientific and technological challenge this involves for BASF.

Data technology from **BASF: Playing a part in** pointing the way ahead to more effective utilization of information.

# Innovative Imaging: An Extra Dimension

UNIRAS systems hunt for oil or the Titanic, aid in aerospace design.

By Michael Metcalfe

OPENHAGEN — On a neat industrial estate on the outskirts of the Danish capital, a small company has emerged as a pioneer of previously uncharted paths in the domain of high-quality color graphics software.

The product range from UNIRAS, which was founded in 1980, features high-performance, interactive application packages and powerful graphics building blocks for users of computer graphics on mainframes, minicomputers and 32-bit work stations.

The products can be divided into five main application areas: geological and geophysical mapping; environmental, demographic and business mapping; engineering, scientific and complex business information display; seismic data display; and imaging.

data display; and imaging.

The Danish company's software packages have proved especially useful in the oil industry for seismic or geological exploration, in the automotive industry for research and development purposes, in the aerospace industry for design and draftsmanship and in medicine for body espaning.

What makes UNIRAS so different is that it has applied the use of raster techniques to software specially designed to deliver a broader spectrum of colors, improved resolution and greater throughput. It therefore makes the most of the successive new generations of computer hardware technology while still supporting the vector devices of an earlier generation.

"If you have a pen and want to make a drawing on a piece of paper, you are then applying vector technology," said Jan G. Knudsen, one of the two founders of UNIRAS and now its marketing vice president.

"You can make a point, do a line, draw shapes or letters, basically in black and white," Mr. Knudsen said. "Basically, it's a 2-D world. As sooo as you try to introduce surfaces and colors, you have to go to raster technology."

Raster images are ideal for use oo a television or computer screen because they are based on a rectangular display of digital information composed of definable locations oo the screen, otherwise known as pixels (picture elements). Pixels can be arranged and rearranged in countless configurations to produce color tones, which vary in shade and intensity, Moreover, raster images can be reproduced in any size without losing their resolution.

MICHAEL METCALFE, a journalist based in Copenhagen, is a correspondent for Business International.

"When you want to do colorful 3-D models, where you want to have the hidden surfaces exposed, you can really see the 3-D objects with raster technology," Mr. Knudsen said.

The use of applied raster technology by

The use of applied raster technology by UNIRAS owes its origins to the pioneering work of Helmut Hertz, who at Sweden's Lund University in 1969 invented the first ink-jet color plotter. From this sprang an idea by Mikaei Jern, a Swede, to develop the first-generation color raster software by programming a computer to regulate the flow of the ink

In 1976, Mr. Jern and Mr. Hertz sold their invention to Applicon Inc., of the United States, which made the first commercial version of the ink jet. Mr. Jern and Mr. Knudsen then decided to join forces.

"We saw there was a great need for displaying statistical results in the form of color maps
and we started working together, first creating
an application package on top of his [Mr.
Jern's] existing color software, named GEOPAK, which we announced in 1980," Mr.
Knudsen said.

UNIRAS was born out of this cooperation, and Mr. Jern continues to work as its technical

At the beginning of the 1980s, the product was expensive, selling at about \$100,000. While prices have now declined at the lower end of the market, where, for example, a PC-driven software program can cost from \$3,000 to \$4,000, at the top end of the market prices range from \$250,000 to \$300,000.

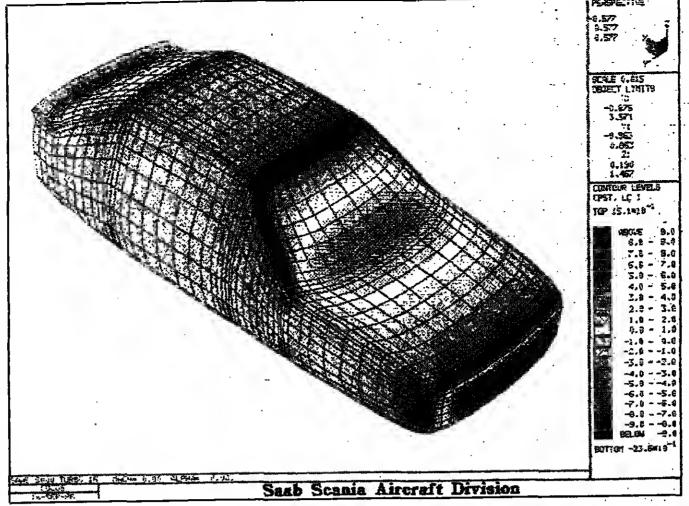

range from \$250,000 to \$500,000.

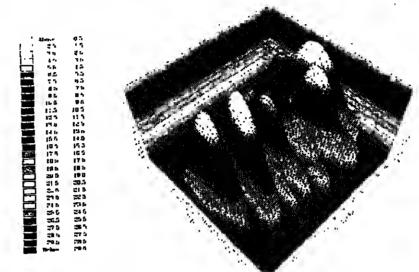

Reflecting the rapid growth of the offshore oil industry in the early 1980s, UNIRAS's first commercially available product, GEOPAK, was a software package to aid energy-exploration companies in their search for hydrocarbons. Since then, the company has taken its technology into a number of other application areas, including automotive and aerospace manufacturing, pharmaceuticals, communications, defense, energy generation and distribution, and environmental monitoring.

GEOPAK is an advanced cootour and gridmapping software package capable of producing full-color, smooth-shaded maps in 2-D and 3-D with a minimum of computer programming.

The use of color facilitates the interpretation of data on subsurface structures. The GEO-PAK routines, as well as UNIRAS's other building blocks, are written in the computer language known as ANSI FORTRAN.

It was this system that was used to create three-dimensional color maps of the Atlantic Ocean's floor in order to survey the seabed and deduce the currents in the area where the ocean liner Titanic was believed to have sunk. The

UNIRAS graphics: Top, for Saab; above, a GEOPAK image.

GEOPAK package allowed the currents to be added as a fourth dimension.

Other systems developed by UNIRAS, which employs 120 people at headquarters in Copenhagen and at subsidiaries in the United States, Britain, France and West Germany, include packages for a variety of functions and

For example, its SEISPAK system can be used to construct custom application programs for seismological, geophysical and well-logging

purposes. With it, oil exploration companies can obtain accurate color cross sections of various types of rock formations for use in seismic surveys.

Another system, GIMAGE, opens up the range of raster output devices to users wishing to capture data from satellites, medical and optical scanners, video cameras and other image-capturing equipment.

age-capturing equipment.
In its application, GIMAGE is ideally suited for medical research and hospitals, where it

can be used to create a patient's file by converting body-scanner images into high-quality color printouts. Using this system with readily available graphics equipment is a cost-effective way of obtaining image-processing capability because it is tapping information already organized into raster scan lines.

In the aerospace and space industries, the raster graphics technology can be used to construct 3-D designs and models of aircraft and satellites, measuring the effects of wind velocity, air currents, thermal patterns and other climatic conditions on wings and fusilages.

When the plume of radiation leaking from the Chernobyl nuclear plant spread across Europe last spring, France's Spot-Image company used UNIRAS technology to obtain high-resolution, hard-copy printouts of the various levels of radiation, which was measured in colors to assess the possible effects on crops, livestock and market gardening.

The software has military applications as well. For example, it can be used in antisubmarine warfare by plotting and configuring seabeds, saline strengths, currents and other obstacles often hard to detect and measure through the more conventional means of radar and sonar. Satellite jamming and communications interception are other military areas where the raster graphics technology can be

For the future, UNIRAS is setting great store on its recent agreement with IBM whereby the UNIRAS color graphics software range is available on the new, high-speed IBM RT personal compoters. The deal also allows IBM to market all of the Danish company's systems.

# Chips Key To Memory, Capabilities Big Blue Cloud. Capabilities

By Jim Bartimo

OUNTAIN VIEW, California

Not so long ago, personal computers were bulky toys that were as expensive as they were hard to use. But thanks to several technological advances, multitudes of business people now use sleekly designed, low-cost personal computers to create budgets, write reports or make presentations more efficiently.

To understand the metamorphosis of the personal computer in the last seven years is to understand the technology that makes a personal computer a good business tool.

sonal computer a good business tool.

The brain of a computer is its central computer chip. The more powerful the chip, the smarter the computer. In the chip would, "smarter" primarily means two things: the agility to process information quickly and the ability to run easy-to-use software.

The chips of the first computers—the Apple II, for instance—processed information eight bits at a time. The IBM Personal Computer and others raised that figure to 16 bits, although information was still delivered eight bits at a time. The Apple Macintosh uses a chip that processes information 32 bits at a time, while accepting it at a 16-bit rate. And this year Compaq introduced its 386 model; which uses a true 32-bit chip.

More bits mean more speed, but more important is a chip's ability to use a large amount of memory at one time. The first Apple II-could use a total of only 64K bytes (or 64 thousand characters) of information, while the Apple Macintosh today can conceivably use-4M bytes (or four million characters.)

Which this memory random access memory, or RAM, resides the entire software program and the user's data. The more bytes of memory a computer can use, the more lines of software code it can use and the more data it can store.

Mari ( iz . . .

The advances in memory chips are more economic than technological. While new memory chips can hold more pieces of information than old ones, it is because of the dramatically dropping prices that computer memory is available to so many.

The vast amounts of memory available in most computer systems have led to equally impressive leaps in software technology. The latest trend is to divide up the mass of computer memory and use each piece to run a separate computer program. Microsoft's Windows software, for instance, lets you load and run two, three or more individual software packages and switch automatically among them (the better chip and more memory you have, the more programs you can load at once). An Apple program called Switcher does the same thing on the Macintosh.

JIM BARTIMO is the author of a book on, personal computers and has written for several magazines in the United States.

# Big Blue's Blues: IBM Confronts cloudy Outlook as Demand Shifts

EW YORK — The sun never sets on IBM — but the world's largest computer company has seldom faced such chill and cloudy times. For the first time since the Great Depression, IBM has endured two consecutive years of earnings decline.

The industry is experiencing structural changes because the nature of demand is shifting. Computers are becoming less important than the software that runs them; rather than choose from a hodge-podge of incompatible machines, customers want computers that can easily talk with each other and share data.

While IBM remains the most profitable company in the world, with revenue of \$50 billion a year, it now seems as concerned with managing its costs as it does with expanding into new markets. Still, even as it shuts down redundant nperations, shuffles headquarters staff members into sales positions and trims the rolls through early retirement, IBM has embarked on a glubal campaign to recapture the levels of profit growth it has enjoyed in the

past.
"You'd be amazed at the similarity in what we say when it comes to getting competitive and being responsive to the customer, said A.E. Santelli, vice president of market development for IBM Europe. "You hear it in Italian, you hear it in German, you hear it in French."

What they are saying is that IBM has to shore up the weaknesses in its product line while expanding the array of software and service options for its customers. That requires a sales force rewarded for being able to sell systems and solutions, not just the latest and most expensive product offerings.

This is particularly important because IBM acknowledges that, for the foresceable future, the rate of growth of its foreign operations will outstrip the rate of growth in the United States.

"We expect revenues to grow slightly faster outside the U.S. than in," an IBM spokesman said. "That's particularly true in Asia and the Pacific Rim, where there are relatively high rates of economic growth.

Indeed, the president of IBM Japan, Takeo Shiina, has forecast a growth rate of 20 percent or more in sales, to \$13 billion by 1990. IBM Japan's 1986 revenue topped \$5 billion. The company has great expectations for

IBM Japan and its strong position in the Pacific Rim area, which extends to Malaysia, South Korea, China, Taiwan, the Philippines, Singapore, Indooesia and Australia.

Last year, Asian operations accounted for roughly 13 percent of IBM's total revenue, compared with 49.5 percent for the United States and 33 percent for Europe, the Middle East and Africa.

The weakness of the dollar improved Japan's contribution. When the dollar is factored out, European growth is shown to have been relatively flat, said Richard Martin, an analyst for the New York-based investment firm of Sanford C. Bernstein.

Io the aggregate, however, IBM's gross reve-oue last year from its foreign markets climbed more than 20 percent to \$25.88 billion. But even though revenue rose, overseas earnings increased only 3.7 percent, reflecting extensive price cutting and the fact that the company's international efforts to manage costs have been proceeding more slowly than at home.

The company is counting on sales of its new 9370 to help it establish global primacy in the midrange market.

The relatively strong performance of IBM's international operations should not obscure fundamental difficulties that are nagging IBM sales efforts around the world. As in the United States, IBM's share in the personal computer market is dwindling. PC clones, as they are called, have eaten away about a third of IBM's European market in the last 18 mooths.

Still, personal computers are a relatively minor concern for IBM, which nbtains less than 10 percent of revenue from these ma-chines. The company acknowledges that its efforts to compete in the multihillion-dollar market for mid-sized computers, which are more powerful than personal computers but slower than large mainframes, have been something less than stellar.

Despite a global slump in the sale of com-puters, the middle range has done relatively well. Digital Equipment Corp., the world's leading producer of mid-range machines, reported that international sales last quarter caped 50 percent.

By contrast, sales of IBM's multiple midrange offerings bave been disappointing.
Sales of IBM's 4300 minicomputer last year actually dropped 25 percent, "a disaster," said Mr. Martin, while sales of the 3X line were

reportedly flat. That simply will not do for a company used to double-digit growth, and IBM is counting on the sales of its new 9370 machine to help it establish global primacy in the market.

The relative size and cost of computers may no longer be the primary customer concern, however. One reason DEC has been so successful recently is that its VAX computers are easily compatible. A program that runs on a big VAX in Tokyo can run just as easily on a smaller Vax in Zurich. And they are easier to link into computer octworks than their IBM

There are serious questions as to wbether the 9370s adequately address these concerns and customer expectations.

"The international marketplace seems to be further along in distributed computing," said Stephen K. Smith, analyst at Paine Wehber. He pointed out that while hig U.S. companies had taken a centralized approach to computing, European companies, ootably banks, had been more willing to spread computing power around. "Connectivity concerns are bigger in Europe than in the U.S." because so many European companies have operations throughout the continent, he said.

Consequently, there is a push for computer networking standards in Europe and there are some questions as to whether this will aid IBM's System Network Architecture approach or DEC's Vax. The Europeans clearly hope that standards will instead benefit their indigenous computer industries.

Meanwhile, however, it is clear that IBM has to move more aggressively on the compatibility and connectivity frants in order to rekindle customer demand. And because the industry is shifting away from hardware priorities to software concerns, IBM has intensified its efforts around the globe to strike alliances with soft-

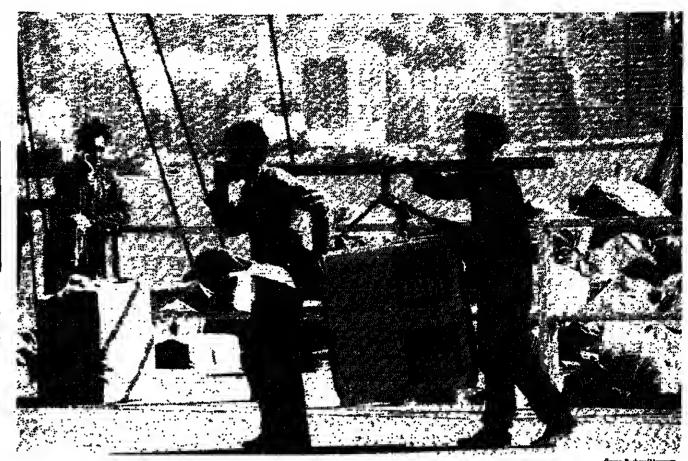

ware developers.

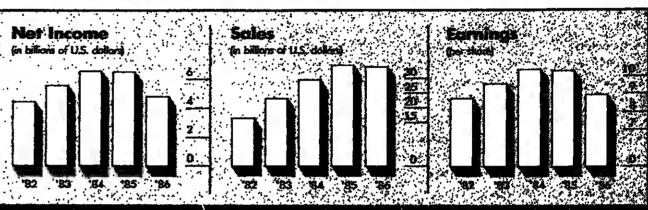

Mr. Santelli said that in "units" (IBM parlance for countries) across the continent, the company is working out agreements with software firms to write programs for IBM ma-

Similarly, IBM is plunging into systems inte-gration — the practice of providing customized hardware and software solutions for large customers with special computational and com-munications needs. IBM's Complex Systems Division in Washington bas won large contracts from an airline and a hospital chain in the United States. The company hopes to hring

that sort of success to Europe and Asia. The question is "how fast one can nrchestrate all the necessary skills in this environ-ment," Mr. Santelli said. This is all part of the growing service economy of IBM. At the beginning of the decade, software and services accounted for barely 20 percent of IBM's revenue. By the end of the decade, software and services will probably account for more than a third of revenue — and an even greater per-centage of IBM's profitability.

MICHAEL SCHRAGE writes on technology

# PC Clones Contribute to Company's Problems

# They cost less, operate faster.

By Sandra R. Reed

AN JOSE, California - The personal computer industry, oow 10 years old, is writhing in growing pains. That's oo surprise. What is surprising is that the company suffering the most intense pain is

The multinational conglomerate has always dominated mainframe computing, but it was a latecomer to the industry built around small systems. When IBM introduced its Personal Computer in 1981, Apple computers had been on the market for more than four years:

Nevertheless, the IBM PC was an immediate

success, embraced by corporations loyal to Big Corp. that governs how users give instructions Blue's mainframes and minicomputers. Internal documents had projected that fewer than 250,000 would ever be sold, but in fact IBM has sold more than three millinn PCs, PC/XTs

and PC/ATs worldwide. While that may seem like a lot of computers, IBM's competitors have sold an equal or even slightly higher oumber of "clones" of the IBM PC, and IBM's market share is slipping dra-

Clones, as the word implies, look like and, more importantly, work like IBM PCs. Clones of all three IBM Personal Computers have thrived. (The PC was IBM's first effort; the PC/XT, its secood, is a faster PC with a fixed disk for storing data; the PC/AT is faster still and has even more storage built in.) The clones have thrived for two major reasons: They generally cost less and operate faster.

IBM itself established the cooditions that made cloning possible. Unlike IBM's main-frames and minicomputers, the PC family has an "open architecture." Anyooe can buy MS-DOS, the disk operating system by Microsoft to their computer. Anyone can huy the Intel 8088, 8086 or 80286 microprocessor chips. Anyone can buy the boards, chips, switches and cables that IBM uses.

Only one part of the IBM PC, XT or AT is owned solely by IBM: the ROM BIOS, which stands for Basic Input/Output System, stored inside the computers in Read-Only Memory.

Competitors quickly found a way around that copyrighted ROM BIOS. Some developed their own. Others bought it from Phoenix Technologies, a Massachusetts company that specializes in replicating IBM's copyrighted instructions without violating the copyright.

Compaq Computer Corp. of Houstoo was the first major clooe maker. Its first computer, which was on the street less than a year after IBM introduced its PC, cost about what an IBM cost, could be carried like a piece of luggage and came with built-in ports to attach peripheral devices like printers and modems.

Scores of companies followed, ranging in size from garage-based enterprises that build

computers as orders are received to multinational companies like Daewon of South Korea, NEC and Epson of Japan and Tandy of Texas.

Because the clooes or PC compatibles were cheaper than IBM machines, Big Blue has regularly had to lower prices and thus profit margins. Although PCs do oot constitute the majority of IBM sales, they clearly are a factor in the company's declining bottom line.

1BM's next personal computer, which is expected on the market this year, may have an operating system of proprietary chips that can-oot legally be duplicated.

If IBM takes the proprietary route, it will be going down the same path as Apple Computer. In its Macintosb and Apple II computers, Apple chose to use custom components. Only ooe company. Franklin, makes Apple clooes. It does so under a court order that gives Apple the right to inspect, and cootrol, the design.

SANDRA R. REED is the West Coast executive editor of Personal Computing.

# Chase reduces global electronic banking to manageable proportions.

At last there's a bank with the resources to manage your financial components in a fully integrated global network.

Chase has a unique range of electronic banking services encompassing treasury, trade, cash management, securities, payments and investment

banking. And a level of commitment to its clients that's unprecedented.

This commitment is demonstrated by the design of Chase's electronic banking services which are based on in-depth research into client needs and the specific dynamics of client marketplaces.

It's an ongoing commitment. Because when you choose Chase, we carefully select a marketing representative and a team of specialists who know your business.

Chase Global Electronic Banking gives you global reach 24 hours a day for

information reporting, transaction initiation and decision support for sophisticated forecasting in all major currencies.

But more than this, only Chase offers you the services and support to enable you to use the foremost global technology to your best advantage.

#### Continued from page 9

The OECD's experts also identified certain actions they believed should be made punishable in all its 24 member nations.

A "common-denominator" approach is needed, they said, to fight computer crime and "computer crime havens" - nations in which freewheeling manipulators can operate across international borders without fear of penalty.

Because of its very nature, crime by computer cannot always be detected. Most often, it involves simply gaining access to stored or transmitted information without altering or removing any data. In many cases, even when a crime is detected it goes unreported, experts say, because the victims, frequently banks, fear the publicity. And, if a crime by computer is detected and reported, it is difficult, if not impossible, to prosecute for a host of reasons, some involving legal definitions of evidence and property rights.

Ulrich Sieber, a research fellow at the Institute of Criminology and Economic Criminal Law at the University of Freiburg, West Germany, and an authority on computer crime, said in his new book, "The International Handbook on Computer Crime": "Estimations can be found indicating that one in 40 computer centers is affected by computer crime, that only one percent of all computer offenses are detected, and that only one in 22,000 perpetrators is sentenced to prison."

The Council of Europe is approaching the problem deliberately, Mr. Nilsson said by telephone from his office in Strasbourg, France, where the council and European Parliament meet. He said he had detected little urgency at the council to address the problem.

"We will sooner or later, probably later, come to some conclusions," he said. "It has come into the state of mind of legislators rather

"From a European standpoint, it's important that we get together and start to think in the same terms."

Observing the work of the council's experts are officials from Finland, Canada, the United States, Japan, the European Community nations, the OECD and the United Nations' Scientific Defense Research Institute.

Mr. Sieber, who has written three books on computer crime, including his handbook published in December, said he felt it was important that the council follow up on the OECD study, which he called a "first and most impor-

Mr. Sieber, who helped produce the OECD report, stressed the need for international cooperation on computer crime because "electronic data processing and communications is

leaping all frontiers." There are no national structures, no frontiers, no borders," he said. "That's what's real-

ly new in this field. "Because the phenomenon is international, the response also, in the legal area, must be

international." Mr. Sieber said he thought the council's group should widen the scope of its work to include computer-related infringement of pri-

According to Mr. Sieber, the increase in dependence on computer systems and computer communications has led to an increase in computer crimes, although the "perfectly veri-fiable" number of cases is small. OECD experts also noted increasing reports of the impact of computer crime.

In one such report, an American Bar Association survey found that 72 of 283 large compamies and government agencies surveyed had had recent computer-related crime, resulting in losses of between \$145 million and \$730 mil-

Experts from 15 nations guided the OECD's study, "Computer-Related Crime: Analysis of Legal Policy." Mr. Sieber and Martine Briat of

the OECD secretariat produced the analysis, and the organization's Committee for Information, Computer and Communications Policy approved its conclusions.

The OECD first took up the issue five years ago, when computer and telecommunications systems were being developed so rapidly that individuals and governments were often at a loss to comprehend the systems or respond adequately to changes that they required.

One of the conclusions the OECD's experts reached was that computer crime should be looked at in terms of intent, or "function," and not in terms of technology used. The organization's work is still considered

unfinished. Other issues, such as questions of information ownership, computer security and transborder data flows, face examination.

Since the OECD began its work, most of its member nations have enacted laws or created commissions of inquiry specifically to deal with computer crimes. However, some coun-tries, including Belgium, Iceland and Japan, have decided that computer misuse requires no special legislation.

# The Trader That Never Sleeps in the state of the state of

Brokerages hire computer experts to develop strategies.

By Stan Hinden

**T**ASHINGTON — From his fifthfloor office, Mike Roberts, a Prudential-Bache broker, can see only the traffic-cluttered streets of Bethesda, Maryland, a suburb of Washington. But on the computer screen on his desk, Mr. Roberts can see around the world.

Displayed on the screen are 16 market indicators and 44 stock quotations. They are up-dated automatically, flashing as they change. At a glance, Mr. Roberts can see the rise and fall of key stock market averages and price movements in bonds, options, futures, com-modities, oil, gold and correncies.

By watching the price gap between stocks and future contracts on stock indexes, Mr. Roberts can tell when waves of computerized buying or selling programs will strike the mar-

ket and send stocks soaring or plunging.

The screen also gives him the latest news adlines, detailed reports on hundreds of companies, opinions of Prudential-Bache analysts and information on all his client accounts.

The computer has revolutionized the securities business. Brokers, traders, stock exchanges, instimtional investors and major bro-kerage houses have been prime beneficiaries, and the regulators who police the industry use computerized surveillance systems to try to uncover insider trading.

At the trader level, the computer has become a high-speed analytical and decision-making tool for trading in such esoteric products as commercial paper, mortgage-backed securi-ties, collateralized mortgage obligations and niterest rate swaps.

The computer is a 24-hour trader that never sleeps. When New York traders close shop, they pass their electronic "book," or unfinished business, to Tokyo, When Tokyo's day is done, traders move the book to London. A few hours later it is back in New York.

Competition is a key ingredient of the in-vestment business, particularly at the level where brokerage houses hire computer experts to develop products and computer strategies.

DuWayne J. Peterson, head of computer operations for Merrill Lynch in New York, said competition was fierce,
"We have a little bit of a 'Star Wars' battle

going on here," he said, Merrill Lynch is hiring computer experts at higher and higher levels of sophistication. The firm recently took on the entire seven-person

management science group from RCA. With a new emphasis on analytical work, the scientists delve into the computer architecture

Program trading employs two key elements. One is a basket of stocks selected from the 500 stocks that make up the Standard & Poor's 500 index. Usually, the computer can choose 300 or 400 stocks that will track the behavior of the entire group. Stocks for such a program, bought in New York, might cost \$25 million.

that will make new product strategies possible.

One area that is getting heavy attention these days, he noted, involves mortgage-backed securities, which represent a growing

One of the early victories for the strategic

use of computers has been program trading, which is now controversial because the pro-

grams can cause the market to soar or plunge.

"It's exotic," Mr. Peterson said.

and highly competitive market.

The second element is the futures contract that trades on the S&P 500 index, which speculators buy or sell to anticipate the price move-ments of the S&P stocks. These contracts are traded in Chicago and expire every three months, By definition, when the S&P futures contracts expire, their final price will always match the actual price of the stocks, called the

In the months before expiration, when the gap between the cash price and futures price is wide enough, traders buy a basket of stocks and sell an equivalent amount of futures. At. that point, they have locked in their profit and need merely wait for expiration to collect.

However, should the traders in Chicago drop the price of the futures close enough to the cash price before expiration, traders will. quickly sell the stocks and take their profits. As a result, the programs can bit almost any time.

A marriage of technology and investments. was demonstrated recently when Salomon Brothers said it would develop an electronic commercial paper market that would give U.S. issuers better access to foreign investors.

For overseas investors, computerization will climinate the costs of handling paper certificates and the problems of lost certificates, said Daniel F. Benton, vice president of Salomon's Brothers. The new market, Mr. Benton said, will involve Salomon, Citibank and CEDEL6: an international clearing house in Luxen-1

electronically swap quotes on 600 stocks of mutual interest. In time, U.S. and British traders will be able to buy and sell stocks through.

STAN HINDEN, a business writer at The Washington Post, covers the stock market and the securities industry.

# The Law: What Western Countries Are Doing

Following is a breakdown of how some Western countries have moved to adjust legislation on computer crime in recent

Australia: Two territories have outlawed dishonest use af computers. Model law was to be considered.

Canada: Broad computer-crime legislation adopted to punish unauthorized interception and destruction of systems, extend credit-card fraud coverage, and define further forgery in computer use.

Denmark: Enacted wide reform of its computer-crime law. Finland; Legislative proposals made on computer-related

France: New criminal law affered to handle "informational crimes" involving automatic data-processing systems. French law includes clauses on audiovisual communication, personal

data protection and admissibility of evidence. West Germany: Criminal code on fraud, embezzlement or forgery has been applied in computer-related crime. A bill including computer-crime provisions on fraud and forgery

became law in August.

Greece: Draft proposals drawn up to amend penal code for computer fraud, breach of secrecy, computer data forgery, unauthorized copying or software use and unauthorized access to computer-stored data.

Norway: A law-reform panel had suggested revision of criminal code to include computer-related crime under fraud

Sweden: Sweden has held that special rules for computer-related arime must be avoided, but a change in law was proposed to include computer fraud.

Switzerland: Proposals made to revise the penal code to cover computer manipulations, such as fraudulent misuse of a system for gain and false bookkeeping.

United States: Congress has considered bills to make computer-related criminal conduct specifically indictable whenever federal interests were affected. Bills on unauthorized access to computer system and credit-card fraud have been enacted. Nearly all states have law an computerrelated property and economic crimes.

SOURCES: "Computer-related Crime: Analysis of Legal Policy," OECD, 1986; "The Interna-tional Handbook on Computer Crima" (John Wiley & Sonz, 1986).

# Nixdorf turns DP and telecommunications into twins

ntil now, they were not even related. But through the medium of the Nixdorf Digital PABX System 8818, EDP and telecommunications become part of an integrated in-house information system which permits simultaneous transmission of speech, data, text, and graphics over a single telephone line.

The individual workstation can now be equipped with all of the information and communications components. The result is

up-to-the-minute information, greater flexibility, and increased productivity.

The system is future-proof. In time, it will become part of the international ISDN network. It should come as no surprise that Nixdorf is at the forefront of this important development: One of the first operational digital PABX units in the world was invented

So don't let artificial restraints on your vital information flow hold you back. Pick up your now obsolete telephone, and call us for a PABX System 8818.

Nixdorf is a computer company. But more than that, we are a telecommunications company which is geared for a future in which computers and telecommunications will be fully integrated.

We're working to see to it that you will be ready for that future, too.

Call and see us at the Hanover CeBIT Fair 4-11.3.1987 and the Industry Fair 1-8.4.1987.

Nixdorf Computer AG Fürstenallee 7, 4790 Paderborn West Germany, Tel. 5251/506130

# Efforts to Duplicate Human 'Wetware': Is This Machine Thinking?

By Curt Suplee

ASHINGTON - A mind is a terrible thing to make. Or so we have long believed. The prospect of machines that can actually think has vexed human fancy since the dawn of cybernetics and haunted pop mythology from consider Planet to 2001: Space Odys-

It menaced again in the recent fad fervor for apprehensive desk jockeys discovered that, desisted controlled of AV. is closedoads of AI software, their IBM PCs were still as dumb as a toaster.

Now, however, a radically new form of comafer architecture and a revolutionary concepnon of synthetic thought are bringing the prospect close to reality:

• In Baltimore, a bucket of chips is teaching itself to read.

• In Cambridge and San Diego, blind wires are learning to see in three dimensions. • In Pittsburgh, terminals are talking back to their users.

And suddenly in laboratories across the country, formerly dreary and docile computers are becoming quirky, brilliant and inscrutable.

They are becoming, in short, more like peo-

At the heart of the new machines is a system called a neural network: a circuit designed to replicate the way neurons act and interact in the brain.

# 40% LDC .It differs from the traditional system design as a conference call from a walkie-talkie; from traditional system behavior as an infant from an adding machine. It makes mistakes, finds solutions that are "pretty good" rather than perfect, can keep running even when badly hunt and organizes itself according to its own idiosyncratic rules.

Of course, it has its drawbacks. "It can't add 2 and 2," said Robert Hecht-Nielsen, manager of TRW's Artificial Intelligence Center at Rancho Carmel, California, Don't have a neural net do your bank book."

"Networks are more naturally suited to the kinds of problems that human beings are good at," said a Johns Hopkins biophysicist, Terrence Sejnowski. "We're not good at memoriz-ing or doing arithmetic." Moreover, "it will make errors. But they're not errors that you'll be uncomfortable with."

No to come and a second LMOST every computing device in use today shares a common structure derived from the work of the 20thcentury mathematician John von

> 'All elements of the system are expressed in binary digits (0 or I, on or off; hence the term "digital") and stored at specific memory addresses like post office pigeonholes.

> All work is done through a single central processing unit (CPU) or main chip. When the software requests something, the CPU proceeds to locate the relevant units of data, poll them down, process them and then reach out for the next specified bunch.

> Each transaction must be handled one after another by this CPU, whence the expression "serial" processing. It is fine for running a spreadsheet. But if your brain worked that way, it would take you a month to tie your

"Look closely at the brain," said Christof Koch of the Massachusetts Institute of Technology's Artificial Intelligence Laboratory, "and the distinction between hardware and software disappears" in what he calls a "com-

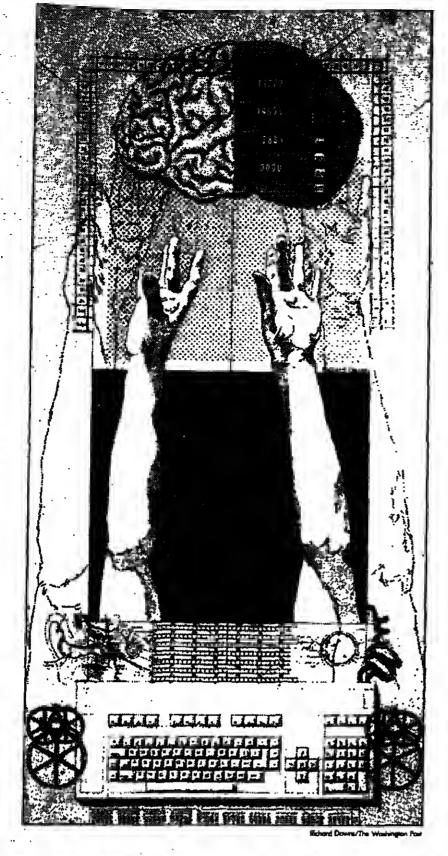

In the "wetware" of the human nervous neuron is connected to as many as 1,000 others.

ft collects two kinds of "input" — excitatory and inhibitory - from other neurons, then

sums and processes those signals. If the net result is within the cell's normal capacity for excitement or inhibition, the neuron will remain at rest. If the result exceeds that "resting threshold," the neuron will fire sending "output" to multiple points on other neurons, which in turn aggregate their inputs

Second, the inter-neural signals are not simple, all-or-none digital code. They vary over a range of gradations.

Scientists struggled unsuccessfully for de-

cades to duplicate this structure on computers. In 1982, a Caltech biochemist, John J. Hop-field, suggested a model, reviving interest in

Mr. Hopfield's prototypical neural network uses an amplifier to mimic the neuron's core and a set of mathematical routines called algorithms to determine how each pseudo-neuron will process its data.

Incoming lines from other "cells" are run through a set of capacitors and resistors that simulate the difference between excitatory and inhibitory signals, the amplifier has two output

imes — one positive, one negative.

Such systems are capable of astounding speed, because, as Mr. Hopfield and David Tank, of Bell Laboratories' Department of Molecular Biophysics, write in Biological Cybernetics, "a collective solution is computed on the basis of the simultaneous interactions of bundrates of designs."

hundreds of devices." Those strengths are exquisitely well spited to some of the worst bio-tech bugaboos in engi-neering such as getting industrial robots to see properly; building defense systems to analyze images or sonar signals as fast as they are received; developing systems that can recog-nize and respond to speech. There are now scores of scientists probing the networks' po-

A company called TRW has one neuralnetwork computer already for sale and another nearly ready for release.

EURAL networks are besting mainframes in tackling some of the toughest computational problems. early 1990s, and research is expanding in a

dozen directions. Listen to that," said Mr. Sejnowski, the Johns Hopkins biophysicist, referring to a tape player emitting an eerie, twittery gargle.

"It's discovering the difference between vowels and consonants," Mr. Sejnowski said. He is histening to a neural network teaching itself to read aloud.

Working with Charles R. Rosenberg of Princeton's psychology department, Mr. Sej-nowski designed a network whose task was to learn to pronounce correctly a group of scn-tences containing 1,000 common English

They had been read previously by a little boy, and a linguist had transcribed the boy's speech into phonemes, the discrete parts of words, that would serve as the benchmark for the network's accuracy.

Mr. Sejnowski and Mr. Rosenberg fed the letters of each word sequentially into the network for processing by three successive tiers of proto-neuronal "cells," each of which receives data that "fan in" to it from various cells in the layer below, manipulate the data and then send the result up a level, finally exiting into a

speech-synthesizer. If the machine had "known how to read" from the outset, each of the cells would already have contained the correct program equations for assigning certain sounds to certain clusters

Instead, the two researchers filled the cells with mathematical garbage generated at random. The system was thus designed to begin in complete ignorance and "learn" just as a child does - by being told he is wrong.

That is, the output end of the system would record each squawk the network sent to the speech-synthesizer, compare it with the correct phonemes recorded by the linguist and send an error signal to inform the network how far off it had been from the desired sound.

Then the network, using a system called "back-propagation," would begin amending itself backward: Each layer of processing cells would pass along the error code to the layer beside or below it, with orders to change its output the next time it encountered those particular letters.

The tape contains the results. Within an bour, the network is beginning to pause at intervals ("See — it's finding out about word boundaries") and soon is hitting 20 to 30

After running all night, it is virtually perfect: "I like tagota my grandmother's bouse." And soon it is pronouncing correctly words it has never seen before.

Each of the system's 200 cells has modified its equations hundreds of times. The scientists know it has taught itself. But they do not know how. Nor can they predict exactly where it will store its knowledge. The network has obviously learned to ex-

tract something about English pronunciation, Mr. Sejnowski said. "Otherwise, it couldo't generalize. This system can discover the rules. The question is, 'Can we make any sense out of those patterns?' " Although each cell is identical when the

program begins running, "what we are discovering is that these cells do tend to specialize in certain patterns - some in vowels, some in consonants, some in certain phonemes," Mr. Scinowski said. Nobody told it how to do this. Nobody

knows exactly how it did it. Neural networks program themselves.

But then, nobody told you the locomotor rontines for sitting down. For all the power of the most advanced supercomputers, they cannot do the things a 6-year-old does routinely; derive the meaning of words from their tone and context or recognize an uncle after he has grown a mustache and dyed his hair.

Nor can they handle the huge volume of data that biological systems like the eye manage effortlessly.

But neural networks are beginning to develop some of those capabilities, especially in the areas of associative memory and rapid "close-chough" solutions to complicated problems. Hang around networks long enough and you're bound to hear the one about The Traveling Salesman Problem, known among neural cognoscenti as "the TSP": Given a dozen or so cities he must visit, how does the TS select the shortest route?

It is the classic example of a certain kind of "optimization problem": How can employees with varied skills be assigned to make them most productive? How should a mobile arm move to generate the least stress on its parts? How should a basketball player pounce to intercept a weaving opponent's shot?

A human being looking at a 10-city TSP will rapidly come up with a good solution. After all, there are only 181,400 possible paths. But it's still a pretty good workout for a digital com-

HAT'S why John Hopfield and David Tank drew national accolades when they devised a neural network that found one of the two best solutions in less than a tenth of a second.

A 30-city TSP quickly boggles the human mind and is enough to give a mainframe a migraine. There are 4.4 trillion billion billion possible routes-hours of processing on a conventional computer. But Mr. Hopfield and Mr. Tank's network popped out answers that were within the top microfraction of 1 percent of best solutions

"Close enough" may be a poor criterion for brain surgery and winning the lottery, but for many problems in biomechanical engineering, robotics and pattern recognition, "a good solu-tion obtained very quickly is better than waiting for the perfect solution," Mr. Tank said. Future designs may take advantage of the

neural net's ability to sustain major loss, thanks to its decentralized structure. "Cut just one wire on a conventional com-

puter," said Mr. Sejnowski, "and the machine will stop dead. But you can cut large sections out of this network, and it doesn't even feel it. It will make a few more errors occasionally, but

no single connection is essential." That is a net plus for Mr. Hecht-Nielsen of TRW, whose work is funded in part by the Pentagon's Defense Advanced Research Projects Agency: "Our customers like the idea that it might be able to take a few bullets and keep on running." (So does the Jet Propulsion Lab-oratory, whose deep-space vehicles have to

function for years.) Aside from defense uses, Mr. Hecht-Nielsen expects neural networks to promote dramatic improvement in robotics. "The big problem with today's industrial robots is that they have

very primitive visual systems." But networks can program themselves "to learn to discriminate between good and bad products. The discriminants they will discover are so complex analytically that you could never derive them from the bottom up."

Mr. Hecht-Nielsen is equally enthusiastic about innovations in "the buman interface arena." He foresees retrieval systems that exploit the networks' capacity for "closeenough" or "near-match" solutions so that they will reach out and find the right data even when the user specifies "only some corrupted version" of the right item.

And the networks' self-programming ability could save us from ourselves, "Most people who use a computer make mistakes, type the wrong keys. Well, we could have a keyboard that simply remembers your corrections and

learns the patterns." Then when you hit the wrong key, "it would end up doing what you mean, not what you

# The Contours of a Neural Net

ASHINGTON — Perhaps the

most fascinating aspect of neural networks is their natural propensity to take on the "shape" of a

As data are fed into the system, each model neuron's net voltage changes constantly in response to input signals from other interconnected cells.

This collective simultaneous modification continues until the entire network reaches an electrical equilibrium. If that condition could be graphed in three dimensions, it would look like an alternating landscape of hills and val-leys corresponding to the final resting state of each neuron.

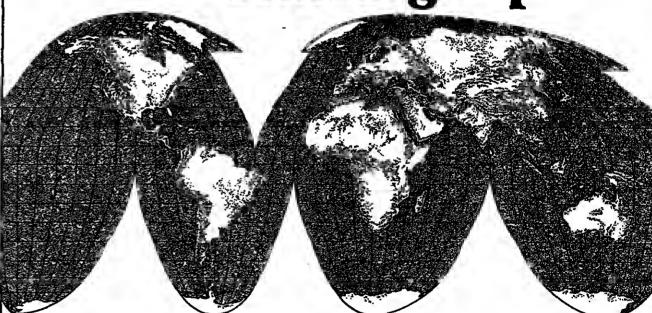

To picture this, imagine the network as a trampoline made up of interwoven straps. Let's say that each intersection of two straps is a neuron. Imagine a cord attached to each intersection. If the neuron's net resting state were plus-2 volts, the cord would be pulled upward until that intersection was 2 inches (about 5 centimeters) above the horizontal surface; if it were minus-3 volts, the cord would be pulled down 3 inches.

The final contours of the landscape will be determined by two factors: each neuron's operating instructions and the data it process But in every case, as John J. Hopfield and

energy expenditure, the bottom of each valley "naturally" represents the best solution to a David Tank write in the journal Science, the "flow" of computation "results from always

# SWIFT on the Wang VS has far-reaching impact.

# Introducing SWIFT on the Wang VS. It's a system you can bank on.

SWIFT on the Wang VS is good news for members of international financial and banking service institutions. Designed to facilitate integration of your VS financial applications with the SWIFT system, and distribute that information through the SWIFT network to locations around the world.

SWIFT on the Wang VS is unique because it combines the information processing strengths of the Wang VS with a comprehensive new standard of branch processors for your international offices. So now you can integrate your communications systems, data processing, and office automation with SWIFT.

SWIFT on the Wang VS is better than SWIFT from an ordinary supplier because it has been designed to meet the future needs of financial services and to accommodate the transition to SWIFT II.

Together with Wang's other solutions that help simplify everything from branch banking to international transactions, SWIFT on the Wang VS reflects Wang's commitment to the financial community.

What's more, it's from the company that makes it work. Wang.

For more information in the United States, call 1-800-225-WANG, in Europe 44-1-568-9200, in Asia 852-5-837-4111, and in Latin America 305-447-0847.

# Coming Soon, the Disposable PC

#### Continued from page 9

tel's 80386 microprocessor, which promises to boost microcomputer power into the minicommater range. Few computer companies can afford to ignore the 80386. "It's our belief that everyone in personal

computing needs to look at the 386 and build some kind of system around it," Bill Gates, chairman of Microsoft Corp., said in Paris last Only a handful of companies have announced 80386-based products since Compaq Computer Corp. of the United States launched its Deskpro 386 personal computer in Septem-

ber 1986. Zenith Corp., Convergent Technologies Inc. and Corvus Systems Inc. are among the U.S. companies that have launched the more powerful machines. Leanord SA, a French personal computer company, in February became the first European manufacturer to announce an 80386based system Apricot PLC, Research Machines Ltd., Comart Ltd. and Jarogate Ltd., all of Britain, have announced similar products in

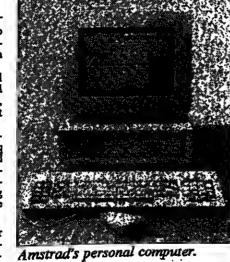

Other manufacturers, such as Tandon Corp., Xerox Corp., Wyse Technology, Oli-tin and France's Bull SA, are expected to follow soon. Industry pundits predict that IBM will not unwrap a personal computer besed on the new technology before the end of

THILE Intel's new microprocessor can run available programs at about twice the speed of the fastest machines on the market, however, its full power will be harnessed only when software is developed that exploits all its capa-

Using the machine with current software is kind of like having a Ferrari in a Volks-wagen, said Stella Kelly, personal computer consultant at the U.S. market analyst Data-

"What is the need of the end user for a 386type machine today?" asked Federico di Trapani, vice president for corporate marketing at

Olivetti. "Only to spend more money." Before software developers can get to work on applications for the new technology, operating systems for the 80386-based machines must become available. This is the software that controls such computer devices as the

screen, printer, memory disks and micro-

Although several companies have released operating systems for intel's chip, an 30386-version of the MS-DOS operating system created for the IBM PC range by Microsoft is not

With the weight of IBM behind it, MS-DOS has become the industry standard. Mr. Gates, Microsoft's founder, has said that the U.S. company is preparing a new version called MS-DOS 5.0 that will be designed for the

80386 processor. "The key announcements relating to MS-DOS will be made in the next six months, and that will be a base the applications developers can start working with," said Mr. Gates.

Software developers, however, could take up to 18 months to prepare applications once the operating system is ready. Until then, sales of personal computers based on the new technol-

ogy should remain modest. We question the viability of the 386 as being a revenue generator for vendors for another year," said Simon Pearce, analyst at the information-technology consulting firm IDC Europa, a London-based unit of International Data Corp. "While we're waiting for the 386 to become viable, everything is being terribly pressured at the bottom end," he added.

There, at the cheaper end of the product spectrum, a bloody battle is raging. In the United States, low-priced IBM-compatible machines, or clones, made in the Far East, are helping drive down prices. The Daewoo and Hyundai groups of South Korea have made good on their promise to enter the U.S. market with cheap PC clones.

Daewoo sold 50,000 machines in 1985 under

the brand name of its U.S. distributor, Leading Edge. Priced at \$1,495, the Leading Edge Moded D costs roughly half the price of machines made by the better-known computer makers. The bottom of the U.S. personal computer market dropped out in mid-October last year with Hyundan's launch of a \$699 system sold

through its U.S. distributor, Blue Chip Electronics. While some mail-order companies of-fer clones in the United States for less than \$600, the weight of the Asian giant is certain to push prices even lower. The price war has been slower to explode in

Europe. "IBM didn't lower PC prices in Europe as in the U.S.," said Scott Kelley, consultant in strategic planning at Bull. "Penetration of Southeast Asian micros was not as quick in Europe as the U.S."

According to Intelligent Electronics, 80 percent of the personal computers sold in Europe come from local plants. They estimate that Asian-made clones captured 6 percent of the European market in 1986.

HE European price battle heated up in September, though, when Britain's Am-strad PLC launched an IBM-compatible personal computer range with prices starting at £399 (\$568). The Asian-made machine is "the most radical thing to happen" to the European personal-computer market, Mr.

Price critting is forcing all the national play-ers, such as Bull, Olivetti, L.M. Ericsson of Sweden, Siemens AG of West Germany and fCL of Britain, to revise their marketing strategies. By emphasizing a full range of products and services, they hope to fend off the low-

"I'm not saying there is no price pressure."

said Mr. di Trapani of Olivetti, "but the more you use a PC as part of an offering, the less the

price war may affect you." AMIEL KORNEL is the European editor of Computerworld Communications Inc.

# A Reporter's Manual Bridges Laptop's Communication Gap

By Michael Richardson

INGAPORE - For journalists, computers conjure up an image of a brave new world; the reality is not always beguiling. For a foreign correspondent on assignment, so the manufacturers would have us believe, the lightweight portable computer, known in the trade as a laptop because you can balance it on your knees and work, is technical manna from heaven. No more reliance nn grumpy telex operators on late-night duty, or scratchy phone lines that keep breaking as you try to dictate copy to a newsroom thousands, sometimes tens of thousands, of kilometers away.

Laptops are relatively easy to operate: relative, that is, to larger, more complex computers. Mine is a Tandy 200 and now that I have, more or less, mastered all its essential word-processing functions, it is a delight to work with and has proven, over nine months of almost daily use, to be completely reliable.

I would never return to a portable typewriter. My machine is smaller than most lightweight typewriters, slips easily into a briefcase for plane travel and has a flip-up screen that will accommodate 16 lines of writing. The Tandy 200 runs for about eight hours on four long-life pencil batter-

Not every foreign correspondent reacts with my enthusiasm. Walter A Taylor, Singapore hureau chief for U.S. News & World Report, says he started learning how to use his Tandy 200 in July and still doesn't feel comfortable with it.

"The problem basically, is that I'm a Luddite," he said. "Six months ago, I was carrying an Olympia portable typewriter and it worked just fine." Mr. Taylor said it would be all right if be understood bow to work all the essential functions of his Tandy, but he doesn't. "My kids grasp the system quickly." he added, "hut I can't take them with me as consultants when I

Laptop manufacturers could help widen the circle of devotees if they produced succinct, simply written operating man-uals. The three brands most widely used hy journalists are made hy Tandy Corporation of the United States, NEC of Japan and Olivetti of Italy.

Y Tandy arrived with no less than five manuals. The "Basic Reference Guide" ran to ■ 98 pages. U.S. users can get a 595-page paperback tome on the Tandy 200. It is subtitled: "A complete step-hy-step learner's manual."

I abhor long instruction books and so, I suspect, do most other laptop users, at

MICHAEL RICHARDSON is the Southeast Asia correspondent for the Internationleast to start with. They make the task of learning seem so daunting.

My first laptop was an NEC 8201A, which was similar to the Tandy 200 except that its screen was about half the size. The operating manuals were excessively long and written in Japanese English. To preempt a journalists' revolt, the editorial manager of the newspaper in Australia for which I worked at the time boiled this technical verbiage down to about six pages of easy-to-understand instruction cover-

Writing a story is the most trouble-free aspect of laptop life. Getting it to where it is to be edited and published is frequently the frustrating part.

ing all important word-processing and transmission functions. Those functions, in both the NEC and Tandy software, are

called respectively Text and Telcom.

The best guidance I received on how to work my Tandy was from several fellow journalists who had one. The problem, it seems, is that computer experts no longer speak a plain man's language. There is a hig communication gap that frequently makes a "user-friendly" machine distinctly unfriendly.

Manufacturers should insist that their local distributors employ at least one staff member who can give straightforward instructions to beginners, rather than just dumping a new machine, ancillary equipment and operating manuals on a huyer, as so often happens.

Writing a story is the most trouble-free aspect of laptop life. Getting it to where it is to be edited and published is frequently the frustrating, and expensive, part.

The most reliable and cost-efficient method is to subscribe to a packet-switching network so that all you have to do is dial a local number to gain access to the

system in whatever country you happen to

The network will relay your story, appropriately coded, to its destination. The trouble is that so far no one network has anywhere near complete coverage of capital cities in the Asia-Pacific region. Multiple subscriptions increase the cost of the

For direct international communication, laptop users have to rely on several means. The Tandy 200 has an internal modem — an electronic engine built into its innards that transmits words over the phone line in the form of impulses.

Some laptops lack this facility. They can only transmit when linked to a phone via an external modem built into an acoustic coupler. Machines with an internal modem also have to be hooked up to the phone by a coupler, unless a jack is used. More about jacks later.

An essential precondition for successful use of a laptop for direct communication from the field to a computer-receiving unit at headquarters is access to an international direct-dial phone. But if the phone line is of poor quality or carries over very long distances, then a garbled or incomplete file is likely to be received at the other end.

That has been my persistently painful experience trying to reach the IHT in Paris from Manila. Repeated attempts to get a good connection rapidly inflate your hotel

IDD lines from hotel rooms are not immune from operator interference. At the height of the tumult early last year in Manila that led to the overthrow of President Ferdinand E. Marcos, Bruce Dover, Southeast Asian correspondent for the Melbourne Herald, recalls battling for two hours to get a successful phone connection to his head office to file a long feature.

He was finally transmitting when the botel operator, hearing only the strange hleeps of outgoing electronic impulses and thinking that because there was no voice the line must be free, cut his link and put room service on the other end to ask whether he wanted milk with his coffee.

Cameron Forbes, Southeast Asian correspondent for The Age of Melbourne and the Sydney Morning Herald, encountered the mysteries of long-distance telecom-munication on a recent trip to South Asia. Staying in one of the best hotels in New

Delhi, he tried, after repeated failures using the direct-dial phone in his room, to get through to the receiving computer in Melbourne via the hotel switchboard.

"I finished up operating an electronic switchboard," he said. "The direct-dial system worked perfectly, but the signal from my acoustic coupler just would not

Not long afterward, Mr. Forbes moved on to Dhaka, capital of Bangladesh, where he expected communications to be worse than in India. "I don't know why," he said, "but I had no problem transmitting from there to Australia from my hotel room."

One of the main complaints of foreign correspondents using laptops in the Asia-Pacific region is that the shapes of phone mouthpieces and earpieces vary from country to country and from hotel to ho-tel. Some are round, some square and some oblong.

Manufacturers of accoustic couplers appear hlithely unaware of this problem. Most couplers were designed for use in the United States and Japan, where phone

mouthpieces and earpieces are round. In many hotels in Southeast Asia, phone handsets with square or oblong appendages are in vogue. Unfortunately, as the old saying goes, you can't fit a square peg into a round hole. Without a snug connection to the phone, an acoustic coupler is no use at all and transmission isn't possible.

ACKS offer the promise of bypassing accoustic couplers by plugging the computer directly into the phone line. Unfortunately, in Southeast Asia the same problem crops up with jacks as with couplers. Phone plugs vary from country to country.

Most foreign correspondents carry with them small printers so that if all else fails, as it often does when they are away from home base, they can print out from the memory bank of their computer and transmit the story or message through a hotel telex or telefax machine.

Mr. Dover, who has displayed more technical knowhow and ingenuity than any other colleague I know, uses his NEC acoustic coupler to make routinely suc-cessful transmissions from his hotel room in the capitals of Brunei, Indonesia, Malaysia, the Philippines and Thailand, as well as his home base in Singapore.

He sometimes takes square and oblong hotel room phones apart and connects the wires to his acoustic coupler. In Bangkok recently, an agitated room maid reported to the hotel manager that she had seen Mr. Dover's phone in pieces. "I was in the middle of making my preparations," he recalled, "when the manager came up. I had to explain what I was doing and give an assurance that I could put everything back together again so that it worked properly.

In one hotel in Manila, Mr. Dover found that, while the direct-dial phone in his room was square, the phone beside the lavatory was round but had no dialing mechanism. So he would call up Mel-bourne from the bedroom and transmit from the toilet.

Perhaps the worst fate that can befall a hapless laptop user is to press a recessed switch or button marked "memory power" on the backside of the computer. Do that, and you wipe out everything in the computer software system and the memory.

Someone touched the untouchable on a Tandy 100 belonging to Cheryl Debes, Singapore-based correspondent for Business Week magazine. "I don't know who did it," she said mefully. "It certainly wasn't me. We had to return it to the manufacturers in the U.S. to have the

# Friendly Mouse Gives New Face To Interfacing

AN JOSE, California - To get an idea of how friendly most personal computers are, consider that the term used to describe how people communicate with them is "interface." In the beginning, the act of interfacing with a computer was as mechanical as the term. Once a user figured out how to turn on the system, no small feat itself, a go-ahead symbol appeared, if you were lucky. On some computers, the screen was blank except for a blinking box, It was up to the human at the keyboard to respond with specific, often complicated, commands to start a software program.

The engineers who designed computers and software had good reasons for such sparse interfaces: To be useful, the earliest personal computers needed to direct all of their computing power to computing, not communicating with whoever was at the keyboard.

In 1984, the Apple Macintosh turned that concept inside out. Its interface was so friendly and helpful that people who had never seen a computer could be hard at work on a Macintosh within a fewminutes of turning it on. What made it so friendly was that, for the first time on a popular computer, the interface was graphics-based rather than text-based.

If you wanted to run a drawing program on the Mac; all you had to. do was point at the icon that looked like a paint can, click on a mouse, or control mechanism, and go. If you wanted to get rid of a file, you pointed at it on the screen with a mouse, and dragged it into the trashcan icon. In addition to a new type of interface, the Macintosh's mouse was a new twist, too. Rather than communicate solely through the keyboard. Mac users directed the cursor with the mouse, pul down boxes and menus of commands, pointing to their choice and clicking a button. They didn't have to learn esoteric computer. languages or commands to get work done.

Like all good ideas, the graphics-based interface quickly spread.

Atari uses a similar interface, but in color, on its ST computers.

Commodore's Amiga comes with a color, graphics-based Work-

commodore's Amiga comes with a color, graphics-based work-bench. Even software for the IBM PC is going graphic.

It took time for the use of graphics to develop for technological as well as sociological reasons. Before Macintosh was introduced, graphics were used primarily for games. The IBM PC could not even generate graphics on its screen when it was introduced in 1981. Only when Louis Development released its 1.2-3 financial spreadsheet that drew graphs did the industry begin to realize that some information is best expressed visually.

The first company to sell a graphics board (it went inside the PC) was Hercules, a name now synonymous with high-resolution graphics. Soon, all sorts of business programs began to require a graphics board for full use. Then IBM opened new possibilities when it came out with a color monitor and plug-in color board for the PC, called the color graphics adapter (CGA), which displays images at a resolution of 320 pixels by 200 pixels. Pixels are individual dots on a

Games companies took immediate advantage. Business programs followed. But the CDA board was not well-suited for text-intensive programs like work processors because it had poor on screen resolu-tion. To solve the resolution problem, IBM introduced the enhanced graphics adapter (EGA), which generates both high-quality text and graphics at 640 pixels by 350 pixels.

graphics at 640 pixels by 350 pixels.

Although they are the most popular computers in businesses, the IBM PC, XT and AT (and copies made by scores of other companies) still have a long way to go before they equal the clarity and ease of use of the Macintosh, Amiga or Atari ST.

Two companies doing the most to encourage more PC graphics are Microsoft, through its Windows interface, and Digital Research Inc., through its graphics environment, manager (CELA). But he account

through its graphics environment manager (GEM). Both borrow heavily from the Macintosh, Apple, in fact, filed a lawsuit against. Digital because GEM looks so much like the Mac. The two companies settled out of court with Digital agreeing to let Apple have final say on the appearance of GEM.

Sandra R. Reed

# 'Add-ons' Put Zip in the System

By Margaret Coffey

ONDON -- No matter what kind of personal computer you huy, from the most basic home model to the most advanced business machine, a host of companies are anxious to sell you products to "enhance" it in some way.

These can range from something as sophisticated as a board that costs more than \$1,000 to

inset into your computer to make it operate at three times its original speed, to a \$20 joystick to improve your score in your favorite computer game. All provide something that the com-puter manufacturer did not include as standard. Most try to capitalize on the fact that once you get a taste of the benefits that tech-

nology can bring, you want more.

The market for such add-on products has grown at much the same rate as the market for personal computers.

"When you first huy a personal computer, it seems fast enough," said Simon Shute, sales director of Microway Europe, a company that has been specializing in add-ons for four years. "After a while, it seems slower and slower."

It is at this point that you may find yourself a potential customer for the kinds of products that Microway, and companies like it, sell. If you are a heavy user of spreadsheets, for instance, you might want a co-processor, a chip that fits into a socket in your PC and takes over mathematical tasks. Such chips cost from \$200. to \$400 and claim to significantly speed up jobs

that involve many calculations.

If you want to increase the rate of all sorts of tasks, you might have to go further and purchase a "go faster" or "accelerator" board.

You would choose one with a more powerful

central processing unit than exists in your own PC, and when slotted into the machine, it would basically replace the original.

These devices are not cheap, at about \$1,000, but the companies that sell them claim that adding one to a basic IBM PC can give it the power of an IBM PC AT -a much faster and more expensive computer — at a fraction of what it would cost to replace the entire ma-

The vast majority of add-ons sold in the business market are designed to be used on IBM PCs or close compatibles that use the same software. This is partly because IBM dominates the market for personal computers. But it is also because the original PC was a fairly limited machine. As software became more powerful, it needed more memory to work than the PC provided.

That left an opening for companies like Qubic to set up in the United States and Europe and sell products such as extra memory and hard disks that stored more information than the opes IBM sold.

"If we provide more than IBM, we want it to cost about the same," said Roger Harvey, a director of Qubie in London. "If we provide the same, we sell it at half the price."

The fact that the PC had a limited number of slots into which you could plug these sorts of products gave rise to multifunction boards. These devices combine a number of basic functions such as extra memory and connections for printers and communications devices, so that you can make the most of the slots you

Most of the companies making, peripheral devices try to capitalize on the fact that, once you get a taste of the benefits that technology can bring, you want more.

build more slots into PCs. The add-on market will diminish as IBM's market share diminishes, because compatibles include things in their machines that IBM doesn't," said Mr. Harvey.

All of these products are designed to allow your PC to work more efficiently. Other addous are intended to broaden its capabilities. Many of the add-on boards sold in Britain last year, for instance, were designed to allow the use of graphics software on PCI, according to Context, a London-based market research

Because the IBM PC does not offer graphics as a standard feature, you must buy a graphics board to use software that draws tables and board to use software that draws tables and charts. A basic graphics board costs about \$100. If you want sophisticated, high-quality graphics, you will need something called an Enhanced Graphics Adapter (EGA), a device likely to cost about \$500.

IBM supplies such boards, but other manufacturers claim to offer products that do more and cost less.

"Up to a year ago we were known for our multifunction board," said Gerry Toms, Euro-

pean marketing services manager for Interquadram, the company that claims to be the largest European supplier of PC enhancements. Now the emphasis has shifted to things like EGA boards and communications."

The wide availability of information services that you can call up with personal computers has caused a boom in the demand for communications devices in the United States. Now that on-line information services are becoming more popular in Europe, there is a growing market for products such as modems, which allow PCs to send and receive information over

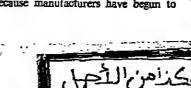

telephone lines.

"People are just now coming to the realization that there is a lot they can do to take the PC from a stand-alone system to something that communicates," said Ken. McClellan, commercial director of Hayes, the company whose modem has become the standard in the United States.

· MARGARET COFFEY, a London-based jour nalist, specializes in computers and tech

These are not as popular now as they once were because manufacturers have begun to The latest in Hayes moderns, the standard in the United States.

# Universities Grapple With 'New Medium' The advent of computers and related technologies has reawakened old anxieties on campuses.

#### By Edward B. Fiske

EW YORK - The encounter between education and new technologies has always been a rocky one. Socrates, who lived during the waning days of the Oral Tradition, was opposed to writing, mainly because it undermined the "art of dialectic" and weakened students memonies. In the 15th century, scholars greeted the invention of printing primarily as a threat to their own authority.

"It was not until the end of the 18th century," noted Patrick Suppees, a professor of philosophy at Stanford University, that textbooks replaced lectures as the norm for teach-

ing in schools.

The advent of computers and related technologies has now reawakened all of these old auxieties on American college campuses. They have posed problems ranging from how to pay for vast amounts of hardware to what it means to be an "educated person" in a technological age. Faculty members and administrators readily concede they have only begun to come to terms with the educational, economic and other consequences of what everyone concedes could end up revolutionizing the academic

"We are not dealing with a new machine," said Richard Cyert, the president of Carnegie-Mellon University, an acknowledged leader in the field. "We are dealing with a new medium."

Computers have become a familiar, even routine, sight on American college campuses. Not long ago, Richard C. Ferguson, the associate provost at Yale University, stood in a windowless room crammed with rows of computer terminals. The room, open 24 hours a day, seven days a week, was only one of several set up by Yale in the last few years for use by

"Five years ago, computers were used basically by scientists and quantitative social scientists," he commented. "Now, it's fair to say that the computer is a general purpose tool for just about anyone." The most common use, of course, is for word.

processing, and professors say that the ease of making revisions has permitted them to require more rewriting - and thus better work.

"Before, when you had a paper to write, you had to do a draft, cut and paste or cross out and scribble between the lines, then type it all over again," said Patrick Melnick, an economics major. With a computer you can refine your paper down to the smallest details without all that effort."

Research has also begun to show another, perhaps predictable, consequence of this new "easy writing": Papers are longer.

Students have began typing notes into computers and, by using key words to cross-reference and assemble information, this helps them cram for tests. Some students even take small portable computers into class for note-

taking. Inevitably, computers have become the latest status symbol.

For college administrators, the advent of computers poses a series of problems, beginning with the economic problem of paying for what in effect represents a major recapitalization of the academic enterprise.

The emergina rule of thems, accorded to be that

The emerging rule of thumb seems to be that colleges in the future will have to spend as much to maintain their computing facilities as they now do to operate libraries and that students will have to spend as much on computers as they now do on books.

Edward A. Friedman, vice president for aca-demic affairs at Stevens Institute of Technology, calculated that library budgets typically consume about 6 percent of a college's operating budget and that computer expenses will eventually stabilize at 5 percent to 10 percent. Students now spend about \$250 a semester for books," be continued. "Over eight semes-

ters, that's what it will cost for a computer." Then there are the technological problems, such as bow to "wire" a campus to promote the maximum communication between students, faculty and outside sources of information.

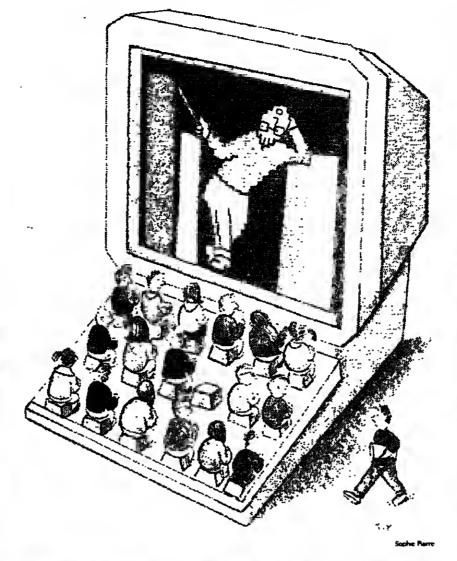

The early hope was that everyone on campus would be linked by electronic networks. Students would have inexpensive personal computers in their dorms, which meant that they could submit term papers electronically to the compatible machine in the professor's office or link up to some huge data base that brought instant answers to questions by satellite.

The technical problems of "networking"

computers of various types, however, have proved to be more complicated than some experts expected, causing budget-minded administrators to think several times before investing in any current system.

"The technology is still moving so fast that many schools are worried they won't spend their resources wisely," said Violet I. Meek of the Council of Independent Colleges.

Three years ago, many educators hoped that Project Athena, a \$50 million effort to wire the Massachusetts Institute of Technology, would provide the model for smaller institutions. It, too, has run into "compatibility" problems, rooted in the fact that even computers from the same manufacturer sometimes have varying

communications protocols that prevent them from exchanging data.

Perhaps most intriguing, though, are the pedagogical issues being raised by the comput-

Everyone agrees that computers have enormous potential for teaching and learning, largely because of their capacity for modeling, simulating and increasing the sophistication of the problems with which students can deal.

In economics, this means tying assignments into up-to-the-minute economic data, not the simplified guns and butter questions of old. In physics, it means interesting problems involving the motion of spacecraft, not simple exercises that have been trimmed down to match students' limited mathematical abilities.

For example, Robert Huke, a professor of geography at Dartmouth College, wrote a program simulating the problems of a rice farmer in the Philippines for his course on the "geograpby of food and bunger." Students use a computer to manipulate 26 different variables. such as the kind of seed and the weather, that influence the yield, price and so forth. To keep things interesting, midway through the exercise they must revise their planning to take account of a new land reform policy.

Some academics have also begun to consider how the new technology affects what it means to be an "educated person." It is one thing to know how to use a computer, they say; it is quite another to understand the values,

thought processes and social consequences of a "technological society."

At Syracuse University, students must now take a series of three courses in which they study one of the natural sciences and then examine ways that technology is affecting it. such as the impact of bio-engineering on biolo-

At the State University of New York at Stony Brook, the department of technology and society in the engineering school offers nine courses a year designed to show students how engineers think, and three-quarters of undergraduates take at least one of them.

The advent of computers has also put engineering, the discipline that lies behind the production of technology, into a new academie light. Some educators suggest that engineering could, like majors ranging from literature to sociology, become the basis for a regular liber-

Joseph F. Traub of Columbia University's computer science department said that this makes sense if one accepts the definition of a liberal art as an area of study that "belos us gain access to a rich culture, teaches modes of thinking and of analysis applicable to other domains of knowledge, helps us to perceive ourselves as burnans in a new way, and understand and appreciate our world."

EDWARD B. FISKE is education editor of The New York Times.

# Software Gets Low Marks As the 'Turtle' Revolution Fails to Develop in Schools

#### By Richard Sharpe

ONDON — Computing in secondary education in the industrialized world has entered a period of hard work and broken dreams. With hopes for a widespread use of computers in the schools dashed in recent years, their use is now determined more by the professional expertise of those in the classroom than by those preparing the software in the computer laboratory.

Secondary school students are more likely to use their school's computers to run a particular educational package than as a general educational tool. The familiar picture of a group of students learning mathematical concepts by programming the computer-controlled "turtle" is fading.

In the early 1980s, a concerted effort was made to introduce computers into the schools in the hope of hringing about widespread cur-riculum changes. Most secondary schools in the countries of the Organization for Economic Cooperation and Development, for example, now have personal computers. However, the expectation of widespread changes has given way to the sober realization that professional and meticulous software for education applications must be written.

Perhaps the best-known hope for using computers in schools was that expressed by Sey-mour Papert of the Massachusetts Institute of Technology. In 1979, he bemoaned the fact that "we think of computers as helping schools in their task of teaching an existing curriculum in elassrooms instead of confronting the fact that the computer puts the very idea of school into question." His major tool for changing the traditional nature of computer education was the Logo programming language.
Logo was adopted with enthusiasm in many

countries, but today it is seen as diverting from the main business of educational computing.

Alfred Bork, professor of information and computer science at the University of California, Irvine, said: "Logo was too much of a cult. Some people were extremely enthusiastic about it, but only a very small group of people can handle it well."

Logo is probably best-known because of its turtle, the animal that children can program to move on the VDT screen. "Turtle geometry is only a small fraction of Logo, added after Logo was written," Mr. Bork

Instead of the grand design of Logo, computers in secondary schools are providing limted assistance in four main areas: in teaching

computer programming, computer literacy, cognitive skills and in learning a particular discipline. In each of these areas, however, the lack of suitable software is holding up progress, Mr. Bork and other educators say. The question bedeviling their growth is: Who should write the software?

In the early 1980s, many governments invested in personal computers for their schools. France and Britain, for example, aimed to put

a microcomputer in every school through state funding. As a general tool for secondary education, most of these programs fell by the way-side unless pushed by enthusiastic teachers. In many cases, the computers reinforced the divisions between schools financially equipped to offer extra services to their students and those that were not. In addition, the computers were frequently monopolized by boys, reinforcing sexual divisions.

Diana Laurillard, an educational researcher

at the Open University in Britain, said that she has been terribly disappointed with the application of computers in secondary education. "How could it possibly be impressive at this

Computers often reinforced divisions between rich and poor schools, and the machines were frequently monopolized by boys.

stage given the poor support it is getting from governments? You can not distribute the skills of writing good educational software easily. The only way is to have a group of professionals devoting their lives to writing good soft-ware." she said. She cited the work of the Educational Technology Center at Irvine, California, as one of the few encouraging signs that

something was being done.
The Irvine center has written a program that teaches scientific reasoning. It is being marketed by IBM. Another private sponsor is paying for the development of a mathematics program that takes a student through pre-calculus.

Other centers in OECD countries are developing programs on additional subjects. Many, bowever, are limited in scope and application to the educational system in which they were authored. The state funds to pay for these programs are also scarce.

RICHARD SHARPE, a writer based in London, specializes in the information technology

# Game System Wins Fans in Japan

#### By Nancy Beth Jackson

- YOTO, Japan - Personal computers have been slow to catch on in this country where a complicated writing system has resisted even a manual typewriter, but today one out of every four homes, or about nine million households, has a Family Computer, an eight-bit system whose applications are only beginning to be

Nearly half a million units are produced monthly by Nintendo Co. Ltd. Last February, the company expanded the Family Computer's memory, market potential and versatility by introducing an optional disk drive and RAM adapter for the original ROM cartridge model. An export program has begun for North America, Europe and Australia. In Japan, the Family Computer is making headlines as "the world's best-selling computer."

But Nintendo executives seem almost embarrassed to call their keyboardiess product a computer. Unlike Fujitsu, Hitachi and NEC, major players in the Japanese computer industry. Nintendo is no technological giant. Nearly 100 years ago in this ancient city known more for its temples and tea ceremonies than microchips, the great-grandfather of the present Nintendo president began printing hanafuda,

traditional Japanese playing cards.

"We get closer and closer to the computer business, but our husiness is entertainment," said Philip H. Saito, international sales adviser. Today, Nintendo produces nearly 70 percent of Japan's playing cards, but cards make op only 3 percent of company revenues. Nearly 95 percent is tied to the Family Computer and

related products.

In the 1970s, Nintendo moved into optoelectronics in toys and image project systems for amusement areades. It introduced microprocessors in video game systems. With Mitsubishi Electric, it developed a video game system using an electronic video recording (EVR)

system and also home-use video games. But what got the company going was the

Invader, "Mr. Saito said. "Space Invader," a tabletop, coin-operated video game using microcomputers, was a runaway success in Japanese game pariors in the 1970s. Nintendo went international with its video arcade games "Donkey Kong" and "Popeye" and began marketing a hand-held game called "Game and Watch." which sold nearly 40 million worldwide. Nintendo still makes arcade games and the hand-held electronic games but only for export.

"Donkey Kong" introduced a funny little fellow whose main aim in a plague-filled life was to rescue a beautiful princess from an almost impenetrable castle. That was the beginning of "Super Mario," who unlike "Pac-Man" was obviously a human character. He was the kind of fellow you wanted to take home with you, so Nintendo decided to give video game players that opportunity.

Three years ago Nintendo launched the Family Computer, or Famicom, with its proprietary 8-bit CPU (central processing unit) and PPU (picture processing unit) manufactured by Ricch. In the first six months, it sold 440,000 units; in the first two years, 3.7 miltion; by the end of last September, 8.8 million. The Family Computer was promoted initial-

ly as a fast and colorful home video game machine plugged into a socket and a television

# Stockbrokers have inquired about using Nintendo's Family Computer.

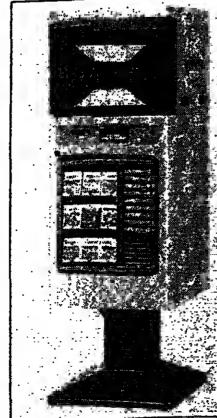

set and manipulated by buttons rather than a keyboard or joystick. Selling for 14,800 year they are up to standard," Mr. Saito said. keyboard or joystick. Selling for 14,800 year (under \$100), the machine was targeted for sales to the 5th-to-9th-grade age group, according to Nintendo executives.

We had to get the hardware into the homes first, but the Family Computer can be used for other purposes besides games," said Hiroshi Imanishi, manager of the Nintendo General Affairs Department. "We feel that because the handling of our equipment is much simpler than the normal computer, companies may start using our system for internal office com-

Nintendo has received inquiries from the telephone company and stockbrokers about using the Family Computer to transmit information. Early this year, the company planned to introduce an experimental disk-fax device to link Family Computer owners into a facsimile system. The company's 20-year-old research and development section is investigating addon printer and monitor possibilities.

One of the company's strengths has been its rigid control of software. Of nearly 150 car-tridge games available, only about 40 are made by the company, but the rest are beensed only after Nimendo quality check.

"In the U.S., literally anyone can make a game, hut a bad game gives a machine a bad

A Nintendo game vending machine.

As sales figures may indicate, the Family Computer is no longer just a kid's toy. Adults are buying the machine for their own amusement. One Tokyo broadcasting executive and his wife, both in their 50s, bought the cartridge model last July to see what everyone was rav-ing about. They also wanted to play Super Mario I, which was available in cartridge.

Then they bought the disk system, because "Super Mario II" was only available on diskette. Since then, they have invested in three Family Computer strategy books and nine games. The executive is trying to get his 76-year-old mother to play. He thinks it would keep ber mind sharp and be good therapy for

More than four million "Super Mario" games had been sold by last summer. A monthmagazine, movie negotiations, the combination strategy-comic strip books and a slew of licensed Mario items, such as rubber boots, sunglasses, dolls, shirts and caps, have fol-

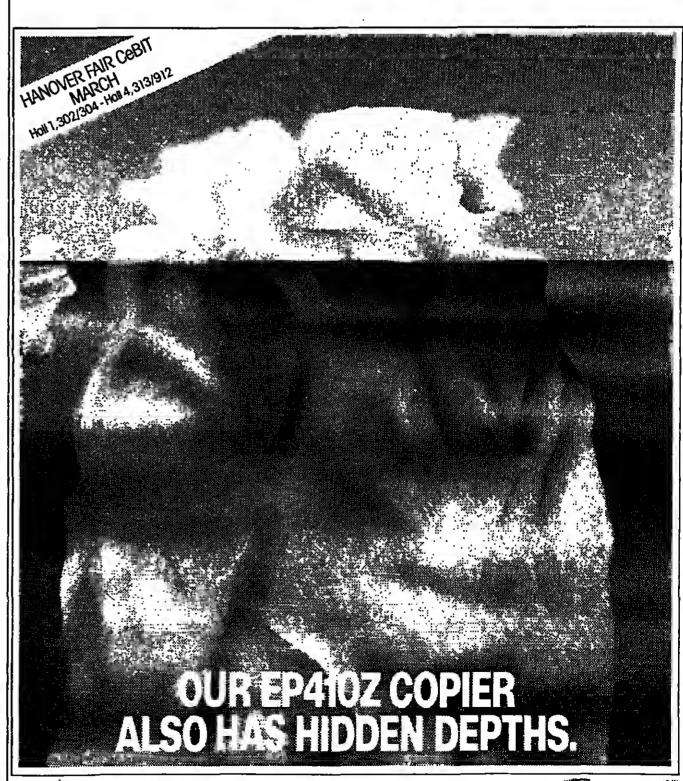

A year ago, Nintendo introduced a new disk drive, which increased the memory capacity and allows players to store uncompleted games for later play. It also allows for more compli-cated games, including math and science edu-cational programs. Diskette games are half the price of the cartridges and offer the option of having new games written over the original for 500 yen (about \$3.30) at vending machines located in department stores and other retail

Nintendo began exporting the Family Computer to the United States a year ago and soon had passed the half-million sales mark. The company projects sales of one million by the end of the year. The U.S. version, made in Kyoto but distributed out of Nintendo's subsidiary near Seattle, is the cartridge generation. North American players will have a choice of 17 games, but Nintendo may license American software manufacturers to develop games under the same tight controls it exercises domestically, Mr. Saito said.

The Family Computer was scheduled to de-but in Australia, West Germany and Italy early

The combination of vivid graphics, including a "scrolling" feature that allows the background to move borizontally; high-speed ac-tion; control over software; and an almost foolproof system against copying programs illegally makes the Nintendo executives think they have a competitive edge internationally. They talk of selling another eight million family Computers worldwide. Most Japanese computer companies these days are making models that are IBM PC compatible. Not Nintendo. "With us, it has to be Family Computer compatible," Mr. Saito said.

NANCY BETH JACKSON is a journalist

Your first glance notes the compact design. Attractive, yet solid. Clearly built to give years of dependable performance. So that if you simply want one perfect problem-free copy after another, there's no problem.

Closer inspection, however, quickly reveals a great deal more. The widest ranging zoom reduction and enlargement available. Image shift. Book copy. Black plus four other different colour choices and numerous optional automatic functions. All designed to make your life easier, get you through

DESCRIPTION OF THE PERSON OF T

# INTERNATIONAL STOCK MARKETS

# Interest Rates, Liquidity Send Tokyo Index Soaring

By CHARLES SHERMAN International Herald Tribane

TOKYO — Investors here hardly blinked at the vague pronouncements of the six leading industrialized countries in the six leading industrialized countries. tries in an ongoing rush to plow money into Japanese stocks. Declining interest rates brought on by another discount rate cut by the Bank of Japan, the fifth in 13 months, sent the Nikkei stank the Bank of Japan, the fifth in 23 months. sent the Nikkei stock average Monday to 20,933, the third record close in the past four trading days.

The index has moved up 5,000 points in four months. Volume is running well over a billion shares a day, up from an average of

"There's no place

else for the money to

Market analysts, whether looking at the oear, medium or long term, express almost limitless enthusiasm for the Tokyo market. Yet no one expects a stellar performance from Japan's economy with its export engine choking on the sharply

revalued yen. go," an analyst Accordingly, shares of ex-port-oriented companies, pri-

marily electronics companies and automakers, have been left behind, but experts say strong

fundamentals underpin the market.

Christopher M. Mitchinson, who heads Japanese equities research for Salomon Brothers, said that under current conditions Japanese stocks have nowhere to go but up. Low interest rates and the overwhelming liquidity resulting from the country's huge trade surpluses are driving the market, he said. Other than into stocks, "there's no place else for the money to go."

Because of low interest rates, the Japanese are beginning to move their savings out of bank accounts in search of higher returns. Much of the money is flowing into equities, brokers say. Foreign investors, meanwhile, have been net sellers of shares for

the past six months.

Although Japan's central bank governor, Satoshi Sumita, said the latest rate cut, ordered Feb. 23, is the last, talk in the market is persistent that Japan will see another trim, of perhaps 0.25 percentage points, by summer. The discount rate now stands at an historic low of 2.5 percent.

HE PARIS meeting of six industrialized nations resulted in what analysts see as an ill-defined commitment by Japan and West Germany to expand their economies in exchange for U.S. help in checking the fall of the dollar. The gathering, on Feb. 21-22, also grouped Britain, Canada, France and the United States.

What happens to the dollar will have a strong influence on Japan's stock market. If it resumes its slide, analysts believe Japanese institutional investors will pour yet more assets into domestic stocks, shying away from investment in dollar-denominated securities to avoid losses on the exchange market. "We learned our lesson last year," said an investment manager for a top insurance company.

Analysts in Tokyo concede that the Paris meeting offered some stability on foreign exchange markets in the short term. Still, not only do they expect the market to test the dollar for weakness, but they are skeptical Japan will find the political will to abandon its austerity policy to spur the economy.

"There's a lot of talk, but no real move toward expanding." said one securities dealer.
William P. Sterling, senior economist in Tokyo for Merrill

Lynch, is persuaded that Japan will stick with its long-term commission, to tight budgets. They started their own Gramm-Rudman process four years ago and now the U.S. is telling them to give it up," he said. Gramm Rudman refers to U.S. budgetbalancing legislation.

The consensus is that whether Japan reflates or not, the stock See TOKYO, Page 19

# Apple Unveils 2 Units

#### New Computers Aimed at IBM

The Associated Press

LOS ANGELES - Apple Compoter Inc. introduced Monday two more-powerful Macintosh personal computers designed for the office market now dominated by International Business Machines Corp.

The big message is that the beginning of the second genera-

tion of the personal computer industry has begun," said Apple's chairman, John A. Sculley.

The new machines, the Mac-intosh SE and Macintosh II, will work faster than older models, but the new computers are so powerful that software developers have yet to deliver programs to fully tap their po-

IBM and Compaq Computer Corp. are expected to launch their new generation of computers in coming months.
The oew Macintosh ma-

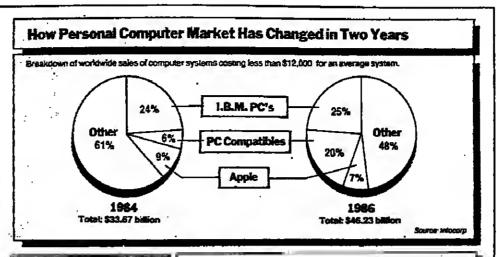

chines were developed under the guidance of Jean-Louis Gassee, a Frenchman who two years ago took over the Macintosh team co-founded by Steven P. Jobs, Apple's co-founder who left after strategy disagree-ments with Mr. Sculley.

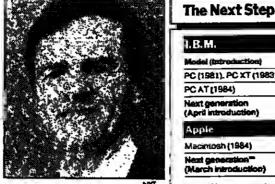

Mr. Gassée incorporated changes to attract corporate computer boyers who complained there weren't enough "slots" to open the machines to add-on devices. In response, the Macintosh II has six slots. The Macintosh SE is already

in mass production and was available in stores Monday. Of the two new machines, it is expected to have the greater effect on the company's finances this fiscal year, which ends in Sep-

# Glitch in the Computer Revolution

## Powerful Desktop Machines Limited By Software Gap

By David E. Sanger New York Times Service

PHOENIX, Arizona - The personal computer industry has been bracing for the arrival of the oew generation of desktop machines whose power and ease of use, some predict, will again transform the

way people and companies handle information. But that transformation, it is becoming clear, may happen far more slowly than many would wish. The gap between the availability of state-ofthe-art personal computer hardware and the development of the software that makes it tick is rapidly widening, and it oow appears that the new wonders from competitors Apple Computer Inc. and International Business Machines Corp. will be on the market for some time before their powers can be fully exploited.

The introduction of the new hardware began Monday, when Apple unveiled a line of Macintosh computers aimed chiefly at the office market. And before the end of April, IBM is expected to show the design that will take it into the 1990s, based oo the enormously powerful Intel 80386 microproces-

sor, a tiny silicon chip that rivals the power of minicomputers and small mainframe machines.

But it will be some time, Apple executives concede, before the applications software that takes full advantage of the graphics and speed of its new computers will be available. And oow it appears that delivery of the Microsoft Corp. operating system for IBM's new machine may take up to two

years — meaning that early buyers will effectively be running a jet engine on propeller-plane fuel. "I realistically think that we are looking at 1990 before there is any significant value from the 386 systems," said Mitchell D. Kapor, the founder of Lotus Development Corp., who left the successful software company last year to pursue his own software projects. "That's what it is going to take

get the applications that will make a difference." Mr. Kapor's comments came at the 10th annual Personal Computer Forum, three days of deal-making, second-guessing and thinly veiled intelligence-gathering that most companies in the indus-

# **OECD Says Paris** Has Little Room To Spur Growth

International Herald Tribune PARIS - The Organization for Economic Cooperation and Development said Monday that the French government had "little scope" for stimulating economic growth without provoking a new round of inflation.

The report, coinciding with gloomy assessments by Freoch usiness groups, also predicted that the nation's gross domestic product would remain unchanged this year from last year's rate of 2.1 percent, despite economic reforms and a drop in inflation rates.

GDP measures a country's output of goods and services, exclud-

ing foreign income.

The OECD analysis was seen as a further sign that France will have a difficult time in lowering its high unemployment rate, which is expected to be a major issue in next year's presidential elections

Finance Minister Edouard Balladur, acknowledging the deterioration in the economic ontlook, said Thursday that GDP this year would rise by only "somewhat more" than 2 percent from last vear, compared to earlier projections of 2.8 percent growth.

Growth at such rates would be too sluggish to reduce unemployment, the OECD said.

It estimated that the unemployment rate would reach a record 11.5 percent by the middle of next year, up from 10.6 percent.

There has been speculation in Paris that Prime Minister Jacques Chirac may be forced to stimulate growth in demand by this fall, possibly through accelerated tax cuts or increased government spending. Referring to such speculation, the OECD said, "Unless competi-

tiveness has improved sufficiently ... the authorities will continue to have little scope for macroeconomic policy maneuver."

The report recommended that France continue to pursue restrictive fiscal pobcies. In particular, the agency said, it should redoce its budget deficit and tighten spending on the social security system.

the danger of renewed inflation. He said Thursday that inflation this year would rise by about 2.5 percent, not the 2 percent projected previously. But he said that restrictive fiscal policies would be contin-

The French employers association warned recently that France was facing a threat of higher prices caused by rising imports and the government's determination to decontrol prices.

Consumer prices for industrial goods and private services are already rising swiftly.

The OECD, describing the price increases as a reflection of "necessary profit rebuilding" by business, urged the conservative Chirac government to coolioue resisting union demands for higher wages.

Leaders of large national unions, expressing fears about workers' purchasing power, bave renewed demands for indexation clauses in future pay cootracts, a practice ended by the previous Socialist government, amid forecasts that inflatioo this year may rise by up to 3

The OECD report describes the performance of French business as "still poor, particularly in industry, as evidenced by the steep deterioration of foreign trade in industrial goods and persistent high unem-

The agency's report, like reports on other members of the 24-nation OECD, is a "oegotiated document," meaning that it reflects the thinking both of the agency's Parisbased secretariat and of the French government, an OECD spokesman

Describing France's foreign trade position as "precarious," OECD estimated that the surplus in the current account, a broad measure of trade performance, would shrink to \$3.6 billion from

France's share of exports in the OECD area has "progressively de-clined, both in volume and in current prices," and may continue to fall, the report said.

The OECD urged the government to cootinue reducing the role of the public sector, modernizing the financial system, lifting price and foreign exchange controls, and making the labor market more flex-

# Insider-Trading Probes Are Raising a Question: Just What Is It?

By John Mechan mal Herald Tribune

NEW YORK - Just as the U.S. government's investigation into insider trading has shed light on the dubious practices of some Wall Street professionals, it also has rekindled debate about the ambiguities of the rules that prohibit such

dealings.

Lawyers, regulators and leaders in the securities industry have quarreled in the past over these legal points. But this time the debate is growing in intensity as federal prosecutors, emboldened by a string of successes, dig deeper into the deal-making methods of invest-

The outcome could not only influence the course of the government's investigations but also havessions in many major non-U.S. markets, where regulatory authorities are placing greater emphasis on rooting out abuses.

On the face of it, the rules do not appear fuzzy. Anyone who uses nonpublic information to buy or sell a stock is guilty of insider trad-ing. But a number of Wall Street firms contend that this simple definition is inadequate to deal with the growing complexities and competitive drive in the marketplace.

Information is the fuel that and its value is measured by the degree of its exclusivity. This is especially true of arbitragers — ronnent is creating a lot of doubts. et al. The one horror l have is that the rules may get to a point where everyone has to have equal knowledge the rules who bet on the likely contract of takeners hids — and contrac outcome of takeover bids - and

From Boeing and Airbus

The Associated Press

DALLAS — American Airlines plans to buy
40 wide-body jets, 25 from Airbus Industrie and
15 from Boeing Co. a published report said

Monday

Monday.

Airlines officials would not comment on the report in the Dallas Morning News, but said that the company chairman, Robert L. Cran-

dall, would make a major announcement at a news conference Tuesday in New York.

The newspaper quoted industry sources as saying the order for the planes, to be acquired through lease-to-buy arrangements, would be for 25 A-300 aircraft from Airbus and about 15

long-range 767s from Boeing.
American, which is based in Fort Worth,

Texas, operates more than 300 aircraft. The order would be the first by American with Airbus Industrie, the French-based aircraft manufacturer owned by a consortium of French, West German, British and Spanish air-craft manufacturers. It would American's first major order since 1984.

Industry sources said that American had been negotiating long-term leases with Boeing and Airbus that would allow it to return the

BRUSSELS - The European Community's

BRUSSELS — The European Community's Commission said Monday that it had opened an inquiry into allegations that the Soviet Union was selling mercury on the European market at less than the cost of production.

The Commission, the EC's executive authority, said the decision followed a complaint from European producers of nonferrous metals that the Soviet sales were harming business and threatening jobs.

the Soviet sales were harming business and threatening jobs.

According to the complaint, Soviet mercury sales in the EC's 12 nations rose from zero a few years ago to 100 metric tons last fall, and threatened to capture one-fourth of the EC market. The industry charged that the mercury was being sold at more than 40 percent below prices charged by EC producers.

## Warner Found Guilty of 9 Counts In '85 Collapse of Home Savings

United Press International

CINCINNATI — Marvin Warner, the former owner of Home State Savings Bank, was found guilty Monday of nine counts in the collapse of the bank but was acquitted of most other charges in connection with investments in ESM Government Securities Inc. of Florida.

A former Home State president, Burton Bongard, was found guilty of more than 100 counts.

Home State and ESM collapsed in March 1985.

# Rival Viacom Suitors Again Lift Bids

W YORK - Viacom International Inc. said Monday that ue of \$7.50 and an equity stake in a stock valued at \$6 and the equity both bidders attempting to buy the new company in he formed from company for more than \$3 billion the acquisition.

After the transaction, current

group led by Viacom semor man-agement, and National Amusements Inc., a closely held theater chain operator based in Dedham Massachusetts.

Analysts said it was difficult to place an exact value on either offer because the values would depend nn when the securities involved in the offers were issued and on what value the market assigned to them. It was the second time within a week that both bidders raised their ars for Viacom, a cable televi-

on and broadcasting concern. The proposals have been revised over bid from a group of investors.

The group, led by Sterling Grace capital Management LP, seeks in several times since the takeover contest began in early February. A committee of Viacom's directors said it would review the new stock it does not own at a price 5 offers, which are similarly struc-

Under the latest proposal from percent of Viacom's stock, each of Stock Exchange, the fund closed Viacom's remaining shares would Monday at \$17.375, up \$1.625.

> Sterling Grace Attempts Takeover of Japan Fund United Press International

NEW YORK - The Japan Fund Inc., a publicly traded investment company that owns Japanese equities with a book value of about \$371 million, said Monday that it received an unsolicited take-

acquire the 95 percent of the fund's percent below its per-share net asset value at the time the deal closes. The offer values the fund at about

Previously, National had offered \$40.50 a share in cash, preferred

The management-led grnup, which includes Terrence A. Elkes, Viacom's president and chief executive, revised its offer in \$38.50 a share in cash, preferred stock ex-pected to be valued at \$8.50 and a portion of the new company's com-

The cash portion of the management group's offer is unchanged from its previous proposal. But the preferred stock value was raised from \$8 a share, and the combined equity interest in the new company that would be paid to current Viacom stockholders was raised in 45 percent from 25 percent.

Both suitors also have agreed to assume about \$550 million of existing Viacom debt.

Viacom's common stock rose on the announcement to close at \$50.50 a share, up \$2.625, on the New York Stock Exchange, where it was one of the most acrive issues. National, which already owns 19.6 \$542 million. On the New York Industry analysts had said the previous uffers were valued roughly at upwards of \$48 a share.

#### WestLB to Pay Dividend After A Long Hiatus

DUSSELDORF - Westdeutsche Landesbank Girozentrale said Monday that it would pay a dividend on 1986 results, its first in six years.

The bank, whose shares are all held by public authorides, did not specify a dividend per share. It said it would pay out 4 percent of its share capital of 1.8 billinn Deutsche marks, which would be 72.6 million DM (\$39.7 million). The bank's involvement as

the largest partner in the trou-bled Deutsche-Anlagen Leas-ing GmbH and other projects had forced it to set aside profit for provisions in recent years. Parent bank preliminary op

Parent bank preliminary op-erating profit was 1.1 billion DM, unchanged from 1985. Group operating profit was lit-tle changed at 1.2 billion DM. The parent bank's balance sheet total rose to 141.3 billion DM from 133.9 hillion in 1985.

# These Companies Hope New Macintoshes Have Coattails

New York Times Service
SUNNYVALE, California — A few years ago, three engineers formed a company to make circuit boards that plugged into an IBM personal computer, increasing its memory and capability. The company, AST Research Inc., now has annual revenue of \$170 million.

With Apple's introduction Monday of Machine that one accompany date add-

intosh computers that can accommodate add-on circuit boards, companies will be vying to become the AST of the Macintosh world.

The venture capital firm of Kleiner, Perkins, Canfield & Byers recently led a group that invested \$3 million in a Macintosh add-on

company, Radius Inc. On Friday, another such company, Supermac Technology, was acquired for \$6 million in stock by Scientific Micro Systems, a data storage equipment maker.

AST Research, which on Monday was intro-ducing circuit boards that will allow the new Macs to run programs written for IBM personal computers, can expect competition from smaller companies, such as these:

General Computer Cosp., based in Cambridge, Massachusetts. It made the first successful hard disk drive for the Macintosh, the

muoshes will be the Hypercharger, a board that will give the Macintosh SE much of the capability of the more powerful Macintosh II.

 Radius, based in Sunnyvale, California. It was introducing cards on Monday to speed up processing and graphical manipulation for the existing Macintosh 512, Plus and SE and will introduce a big screen for the Macintosh SE.

 Supermac Technology, based in Mountain View, California. It was introducing on Mon-day graphics cards and large screens for the new Macintoshes that will provide higher reso-lution than Apple will provide itself.

# GLITCH: Software Gap Curbs New Computers' Power

(Continued from first finance page) try, and IBM's size will not necestry, one participant noted, "miss at

on the personal computer business. This year's gathering at a mountain resort north of Phoenix was laced with both optimism and anxiety. The optimism grew from a sense that the personal computer downturn had bottomed out and that everyone from the largest corporations to the smallest businesses

vas once again buying. The anxiety appeared traceable to the coming tumult of new hardware. Software houses like AshtonTate, which sells the leading data
base manager for the IBM PC, are
scrambling to produce entirely new
scrambling to produ programs suited to the new ma-chines amid new competition from minicomputer and mainframe software producers. sarily be to its advantage. Mr. Sculley's success, of course, their own peril." The forum is run by Esther Dyson, who edits Re-lease 1.0, an influential newsletter

Will ride on whether the computers
the introduced Monday make the
Macintosh more acceptable to Macintosh more acceptable to use and its ability to perform many large businesses. Only in recent functions previously reserved for months have business users begun mainframes and minicomputers to emhrace the older models of the machine, which previously had lit-tle software available for the func-MS-DOS. And that is where the

tions businesses need most.
Apple's chairman said that, with the new computers, "Apple's high end will suddenly become our lowend products" and stressed that the new machines boast "industrial-

will take full advantage of the new is annoying to Apple, it could be critical to IBM.

By installing the Intel 80386 mihlocks that have plagued the company in the past two years. For the first time, the PC will be equipped for connection to intricate office networks, where the microcomputminicomputers and mainframes.

Many expect the new computer will contain some proprietary IBM chips and communications formats that will make it far less easy to "clone." But the machine's ease of will depend largely on a new ver-

problem lies.
An operating system for IBM's three-year-old PC-AT was expected last year, but Microsoft - the designer of the systems software — will still not have it for months. It could be late 1988 before a new system for the 80386 is ready.

The key question is whether the industry will wait for IBM. "The fact that something has an IBM label on it is losing importance," said Thomas F. O'Leary of North American Philips Corp., a major user of IBM equipment and a sub-sidiary of Philips NV. One IBMcompatible maker, Compaq Com-puter Corp., has not waited for IBM: Last September, it brought out its own Intel 80386-based ma-

Some believe IBM's difficulties in getting the new machine going are symptomatic of a bigger prob-lem affecting all of the industry's

There is an inertia settling over the whole industry," said S. Jerrold Kaplan, the chief technologist at Lotus. "Rather than spend time on implementing new ideas, we are forced to put more and more reer shares processing and data stor-age responsibilities with larger bility and assuring that we can consources into maintaining compatinect into other systems.

### APPLE: **Updates Macs**

reported a 151 percent surge in profit in its previous fiscal year to \$154 million on revenue of \$1.90 billion.

Shipments of the higherpriced Macintosh II will begin in May.

Among the new markets Apple is eyeing are higher educa-tion, computer-sided engineering, design and government administration, where the Macintosh had been hampered by equirements for IBM compatibility it has now met.

The Macintosh SE, an updated version of the Macintosh Plus model, comes in two configurations. The basic model has two built-in 800K disk drives, each to store about 800,000 bits of information, and carries a suggested price of \$2,899. The other model, with one 800K disk drive and an internal 20-megabyte hard disk, sells for \$3,699. The Macintosh IL four times as fast as the Macintosh Plus and including 1 megabyte of RAM, or random access memory, will cost up to \$6,998.

## **COMPANY NOTES**

RMJ Holdings LONDON - Exco International PLC, a subsidiary of Brit-ish & Commonwealth Shipping Co., said Monday that it had agreed in principle to buy an 80 percent stake in RMJ Holdings

Corp. for about \$79 million. The Exco chairman, Richard Lacy, said the shares would be acquired from Bank of New York Co., which holds a 50.1 percent share, and from RMJ partners who hold the remainder. The bank and the partners each will retain about 10 percent shares, to be bought over

e next six years. RMJ is the holding company of RMJ Securities, one of the largest U.S. government securines brokers. With offices in New York and London, it employs about 300 people.

Mr. Lacy said that Exco had been considering huying a U.S. government securities broken for years and had made an offer for RMJ when it was sold by Security Pacific Corp. in 1985, RMJ was then valued at \$50

British & Commonwealth's managing director, Peter Goldie, said that RMJ would be bought at about the same multiple as Exco, suggesting a net income of about \$16 million.

# TOKYO: Market Records

(Continued from first finance page)

ahead. According to Mr. Mitchinson, there is such a powerful under-lying trend that any change of gov-ernment policy would only mean small shifts in the investment outlonk. In any case, companies such as Tokyu Corp., a railroad company with large property holdings, and construction companies such as Tekken Construction Co. and Ohbayashi, stand to benefit, he

Added to all this euphoria is the near magic upswing in the share price of recently listed Nippon Telegraph & Telephone. The giant communications corporation, previously wholly owned by the gov-ernment, went on the market Feh. 9 at 1.2 million yen (\$7,840) a share. Within two weeks it had doubled in price. The stock stood Monday at the equivalent of \$17,580 a share, egy al to more than 220 times earning . Small investors have been taking profits in the past few days on institutional demand, brokers said. The excitement surrounding

NTT is drawing more money into the market, brokers say. "There's endless talk about NTT," said one analyst, "It's called attention to the privatization theme in the market."

Boral Ltd., a diversified building materials group, said net earnings rose 18.5 percent to 88.16 million Australian dollars (\$59.29 million) in the half ended Dec. 31, from 74.42 million a year earlier. It raised the interim dividend to 9 cents a share from 7.5 cents. Ecolab Co. of the United States signed a contract with North China Industrial Co. to set up a joint venture to make rinsing agents. Total investment in Ecolab Chemical Industrial Co., to be based in Shang-

hai, is \$2.4 million. Hong Kong Electric Holdings Ltd. will group all its business other than electricity generating into Cavendish International Holdings Ltd., which will be listed on the local stock exchange. Hong Kong Electric

shareholders will receive one share in Cavendish for each share they hold. itt-Bölkow-Blohm GmbH has licensed Nurtanio, Indonesia's aircraft company, to manufacture an additional 30 to 100 BO-105 helicopters a year for international sale, using Indonesian-made parts. It already makes the helicopters for domestic sale. The helicopters will sell for \$1 million, about \$200,000 less

than in West Germany because of lower labor costs. Nippon Light Metal Co. will become Japan's only mnum smelter when Ryoka Light Metal Industries Ltd. stops smelting in April because of high power costs and low prices. Mitsui Aluminium Co. stopped smelting in February. Nippon Light Metal, which has annual capacity of 63,000 metric tons (69,300 short

Boeing Co. for four 747-400 aircraft, the latest model jumbo jet, at a cost of 250 million Australian dollars about \$168 million) each.

Rhone-Poulenc SA, the French state-owned chemi-cals company, will increase its capital with a 2.5 billion franc (\$410.8 million) issue of preferential investment certificates next Monday, nf which 500 million francs will be placed in the United Sates. The group, which is to be privatized at an unspecified date, said in January it was planning a capital increase to pursue its devel-

opment strategy and make acquisitions.

SHV (United Kingdom) Holding Co. is making a tender offer for up to 33 million common shares in Imperial Continental Gas Association. The offer is on the basis of 700 pence (\$10.83) for each IC Gas common and 252 pence for every £1 nominal of IC Gas loan stock.

Thai Airways International plans to expand its fleet to 58 from 30 aircraft by 1995. Thamnoon Wanglee, vice president for finance, said the airline would fi-nance the expansion by borrowing.

Toshiba Corp. has developed a voice-recognition system with an accuracy rate of over 95 percent. It said the system was a first step toward developing a voiceactivated word processor. Toshiba will market the system within a year for about 10,000 yen (\$65).

Virgin Group PLC of Britain has formed a joint venture with Communications & Entertainment Ltd. of Australia to promote the entertainment operations tons), will continue production at a rate of 35,000 tons.

Qantas Airways Ltd. has placed a firm order with

Virgin-CEL Ltd. will be based in Hong Kong.

# INSIDER: Debate Grows Over Ambiguity of the Rules

takeover specialist, Dennis B. Levine, admitted leaking information to him about future targets.

Mr. Boesky, implicated in the largest insider-trading scheme on record, agreed last year to pay \$100 million in lines and returned profits in return for a government agreement to bring only one felony charge against him.

Further refinements of the regu lation on insider trading have evolved through hitigation in which the SEC has attempted to stretch the boundaries of the rules. But critics argue that this tactic has only confused the regulations.

This strategy, in fact, suffered a major setback in 1983 when the Supreme Court set aside the SEC's case against Raymond Dirks, a securities analyst who had discovered that executives at Equity Funding were tampering with the books and alerted his big institutional clients before the news became public.

The high court ruled that Mr. Dirks was not guilty because he did not hold a position of trust in the insurance company. Implicit in the ruling, experts contend, is a recognition by the court that regulators cannot guarantee an absolutely level playing field in the stock market and that some investors will always benefit from information not wide-

A specific concern now is the ambiguity of the rules when it comes to takeovers. Sometimes a corporate raider may leak information about a potential target in hopes that sympathetic investors will take positions that can help him in dealing with management. Although such actinn clearly would be illegal if the raider had made a tender offer, lawyers argue that the

(Continued from first finance page) rules may not apply if the raider to review the case in October dehas not yet purchased shares. Likewise, attorneys have raised

questions about the notion that anyone who uses information he the misappropriation theory. suspects came from an inside source is himself a violator. Legal experts say that guilt or innocence becomes extremely subjective the longer the chain of recipients. "Once you get down to the fourth or fifth person that used

'If you define it,' one SEC staff member said of rules against insider trading, 'it just makes it easier to get around it.'

some inside information, it's difficult to say that they know where it comes from," said John Coffee, a professor of securities law at Stanford University Law School.

Finally, some legal experts are troubled by the so-called misappropriation theory that the SEC used in convicting R. Foster Winans, the Wall Street Journal reporter who leaked the contents of his influential market column before

The government argued that Mr. Winans was guilty of securities fraud because he stole information from his employer. But Mr. Winans was not an insider in the classic sense, and some people say the case raises questions about constitutionally guaranteed press freedom.

The Supreme Court has agreed

The Supreme Court has agreed

spite objections by the Justice Department. Many lawyers believe the court will reverse all or part of

"I think the court wants to say something," said Helen Scott, a professor at New York University Law School. "The problem is that they probably like the theory but hate the case." And Mr. Fitzpatrick of the Securities Industry Associa tion said that "this one is dangerous to the SEC."

Some lawyers are speculating that the SEC and the Justice Department will have to confront the issue of ambiguity if they proceed with the prosecution of Robert M. Freeman, head of arbitrage at Goldman, Sachs & Co.

Mr. Freeman was arrested Feb. 12 for allegedly leaking inside information about the strategy his firm had put together for Unocal Corp. to ward off a takeover bid by T. Boone Pickens, the oilman, in 1985. In return, the government contends, Mr. Freeman received information about a takeover attempt against Storer Communications Inc. that was helpful to him

Goldman. Sacbs denies Mr. Freeman did anything wrong and is planning a vigorous defense, the first time that a major figure implicated in any recent scandal has contested government charges.

Mr. Coffee of Stanford said the case could be troublesome for prosecutors. If Goldman, Sachs shows that Mr. Freemen was merely trying to help the firm's investment banking arm by testing the market's response to the plan, he said, it would be difficult to prove this

chief of staff. "He is popular and seen as an asset to the administration in getting through problems over the arms scandal," he said Mr. Baker replaced Donald T.

Regan, who resigned following the ion report on the Iran-contra affair.

Dealers said the Soviet proposal for eliminating medium-range nn- a barrel. clear missiles in Europe was a mi- in Lor not factor in strengthening the dollar against European currencies.

David Palmer, senior vice president of First American Bank of New York, said that the agreement in Paris on Feb. 22 by six leading industrial countries, which apparently set narrow limits on the dollar's movement, had "scared the

dollar bears away" for now. "Some time in the future the market will challenge the G-6 resolve to support the dollar, but not now," he said.

Mr. Holland said the most actively traded currencies Monday

were the pound and the Australian and Canadian dollars.

"There was sizable Japanese investment in these three currencies because they are not members of the European Monetary System and thus not seen as so vulnerable to central bank intervention," he

The pound rose sharply despite a drop in North Sea oil to below \$16

In London, it closed at \$1,5638. up from \$1.5457 on Friday.

Mr. Holland said it was buoyed by signals that the Bank of England intends to keep interest rates around 11.5 percent and by the fact that Prime Minister Margaret Thatcher may play a central role in U.S.-Soviet arms talks.

Against other currencies, the dollar edged up Monday in quiet European trading.

It closed in London at 1.8315 DM, up from 1.8272 on Friday; at 153.45 yen, up from 153.20, and at 6.0955 French francs, up from 6.0825. (UPI, Reuters) 6.0825

> January, 37 percent reported in-creases and 12 percent declines. Thirty-three percent reported gains in new orders, and 16 percent reported declines from the previous mooth. By comparison, 40 percent reported gains in January and 15

rcent had declines. Although the survey said the growth rate of new orders and production decreased, it indicated that production remained vigorous. with more than three times as many purchasers reporting a better rate

of growth than a worse rate. The report, based on responses from nearly 250 companies in diverse industries, is considered an early indicator of how the economy performed in the previous month.

Its composite index declined to 51.9 percent in February from 55.8 percent in January. A reading above 50 percent indicates an expanding economy, while a level be-

low 50 percent indicates decline. The January figure for oew construction reflected gains in home building and public construction that more than offset a decline in nonresidential building, the Census

(NYT, UPI, AP)

# Analysts Say Dollar's Respite Is Only Temporary

By Kenneth N. Gilpin New York Times Service

NEW YORK - The fall in the dollar, which reached breakneck speed during the first six weeks of the year, is unlikely to resume for at least a few weeks, according to several economists and currency traders.

But the apparent stability that characterized last week's light, nervous trading, will be temporary, they added, All that finance ministers and central

bankers from six leading industrial nations achieved at a meeting in Paris on Feb. 21-22 was to buy a little time, the analysts said. For the longer term, they said, on a purely economic basis the dollar should slide further. "The Paris meetings will have a real impact on the markets for a few days or weeks, and

will create hesitation in the decline of the dollar," said Charles Taylor, a vice president in charge of international economics at Prudential-Bache Securities in Washington. "But I am still pessimistic about the dollar over the next few months. We need to get it lower so that the trade figures can get turned around."

Rimmer de Vries, senior vice president and chief international economist at Morgan Guaranty Trust Co., said: "I don't see anychanged things very much. And I don't know

of a serious economist who doesn't believe that at some stage we need a lower dollar. But another 10 percent drop doesn't have to hap-

pen tomorrow." At the Paris meeting, the officials said that the dollar was "appropriately" valued against other currencies, and implied that steps would be taken to maintain it at those levels.

A currency trader at a big New York bank said, "I suspect that a lot of people don't fear intervention by central banks, but are anticipating it. There will be a few weeks of stability, but there will be some kind of news soon that will cause the dollar to move outside the

general parameters they have in mind." The banker and other market participants project that, in the near future, the dollar will trade within a relatively narrow range of 1.80 to 1.85 Deutsche mark and 150 to 155 Japanese yen. On Friday, the dollar closed in New York at 1.8265 DM and 153.20 yen.

For the longer term, Mr. Taylor and other analysts predicted that the current lows would be tested and that the dollar would fall another 10 percent.

Mr. Taylor said he thought the dollar would trade at 1.55 DM to 1.65 DM and 130 to 140 yen within the next few months. The United States "just cannot go on running monthly trade deficits of \$15 billion," he said.

The U.S. merchandise trade deficit widened to \$14.78 billion in January from an

unrevised \$10.66 billion in December. Aside from the gloomy foreign trade pio ture, analysts are pessimistic because the federal budget deficit remains huge and growth prospects appear to be far from robust. The

Congressional Budget Office projects the deficit at \$174.5 billion this fiscal year. Analysts found a new cause for worry in last Friday's consumer price report, which showed prices rising at an annual rate of more than 8 percent last month.

"The inflation number is kind of a sleeper in all this," the New York banker said. Richard E. Witten, a vice president in the foreign exchange department at Goldman, Sachs & Co., said: "No one in the world thinks that the central banks can stabilize things for a prolonged period of time.

If you think you have a better investment in marks or yen, you will buy those currencies. We think the macroeconomics dictate that the dollar goes down a bit more, but just

Mr. Taylor said of the Paris pact: "When it becomes clear that intervention won't work, the credibility of these countries will have been damaged. In my view, they took their stand when the dollar was still too high."

# THE EUROMARKETS

# Sterling, Yen Bonds Continue to Advance

LONDON - Prices of yen and sterling Eurobonds continued to rise Monday following the gains last week, dealers said, although most areas of the Eurobond market started the week quietly.

Sterling straight bonds ended % or 14 point firmer, while yen bonds were 1/2 to 1/4 point higher. The dollar straight sector was subdued with dealers still awaiting an indication of the dollar's next major

The bulk of activity in the sterling straight market occurred during the morning, dealers added. Prices opened up to 1/2 point firmer following early gains stretching to a will point in the market for British sovernment bonds, or gilts.

Although gilts drifted back to end off the day's highs — the announcement of £1 billion in new government bonds was partly the issued a £100 million convertible yield.

cause - dealers said the sector remained fundamentally firm.

A stronger pound helped support prices, with sterling's trade weighted index closing 0.8 point higher at 70.7.

In the yen market, buying continued from Asia, with one senior trader commenting, "There's just no let-up to this. Retail (clients) can't seem to get enough of sea-

soued corporate issues." He added that some of the more recent offerings were proving a little harder to sell, with those issues paying interest below 5 percent es-

pecially difficult to place. One new straight yen bond was launched during the day, a 12 bilhon ven issue for France's Caisse d'Aide à l'Equipement des Collectivites Locales. The seven-year issue pays 51/2 percent and was priced at

bond. The 15-year issue has an indicated interest rate of 4 percent to 41/4 percent and was priced at par. Investors can redeem it early after five years at a price to yield 814 percent to 9 percent. The buoyant London stock market ensured an enthusiastic reception for the issue, which closed at a premium price of around 104%

Commerzbank Overseas Finance NV issued a £50 million bond paying 9% percent over five years and priced at 1014. Joint lead managers were Samuel Montagu & Co. and Commerzbank AG.

Only one dollar straight was launched during the day, a \$100 million bond for Fiat Finance & Trade Ltd. guaranteed by Internazionale Fiat Holdings SA, The four-year issue pays 71/4 percent and was priced at 101%, which Tesco PLC, the British retailer, dealers felt produced too tight-of a Bureau said.

# Talks on Philippine Bank Debt Likely to Be Tough

Compiled by Our Staff From Dispatches heavily indebted nations. Those "made clear that oegotiations on committee while holding only 35 government and its 12-bank advi- strident demands for easier repaysory committee prepared to open Tuesday what bankers expect to be tough negotiations on rescheduling

more than \$9 billion in debt. Manila wants terms of the debt above the London interbank offered rate, but banks are said to be firm on the 1.125 percent spread offered when the last round of ne-

gotiations collapsed on Nov. 7.
"I have a feeling (Philippine ne gotiators) will be tough, but they would be foolish to come in unless they were willing to negotiate,"

said one New York banker. To avoid an impasse, the Philippines is said to be ready to offer the banks a pricing plan that would make debt payments through so-called certificates of indebtedness

rather than cash.

The talks on Philippine debt are creditors. part of series of negotiations between bankers and officials from

ment terms.

In London, Brazil's finance min ister, Dilson Funaro, continued his mission to explain Brazil's decision to suspend indefinitely interest to be lowered to 0.625 percent payments on \$68 billion owed to commercial banks.

Brazil, the largest debtor in the developing world, has also changed the repayment methods on about \$15 billion of foreign bank deposits

and trade credits. Mr. Funaro spent two days in Washington at the end of last week talking to government officials and international agencies, and from Britain will go to France, West Germany, Switzerland and Italy.

He is trying to negotiate fundamental changes in the international monetary system before sitting down with Brazil's commercial

But in London, the chancellor of

.89 2.8 97x

NEW YORK — The Philippines nations are making increasingly debts with commercial banks are a percent of Brazil's debt to banks. matter for the commercial banks themselves," the Treasury said in a statement after a half-hour meeting between the two men.

"He also emphasized the need for the Brazilian authorities to be able to present a convincing economic program to creditors." the Treasury said, "and indicated that an agreement with the International Monetary Fund could be a very helpful support in this."

Later, in response, Mr. Funaro again rejected any suggestion of an IMF accord, and stressed that his current talks are aimed at obtaining loans from official credit agencies, not commercial banks.

But speaking to journalists in London, Mr. Funaro said his government was unhappy with the said Monday. structure of the 14-member bank nates its commercial debt.

He said this was unfair to European and Japanese banks, adding that Brazil might adopt an ap-

proach involving separate discussions with the regions. Meanwhile, Argentina continued talks in New York with its banks on its 1987 refinancing, which includes a request for \$2.15 billion in new money. "The spirit of

the discussions is very positive," said a banker close to the talks. In another debt development, it was reported from Bahrain that Iraq had secured agreement from Western banks to defer repayments by up to two years on a \$500 million loan to conserve dwindling re-

serves of hard currency, bankers The accord comes after five advisory committee that coordi- months of negotiations and will relieve some of the strain on Iraq's He coted that U.S. banks have economy imposed by its war with

#### THE JAGUAR SMILE: A Nicaraguan Journey

By Salman Rushdie. 171 pages. \$12.95. Viking, 40 West 23d Street, New York, N. Y. 10010.

#### Reviewed by Michiko Kakutani

I N his two remarkable novels, "Midnight's Children" and "Shame," Salman Rushdie looked at the history of his two homelands, India and Pakistan. It is not all that sarprising that Rushdie should become interested in recent developments in Central America, another Third World arena with a long and cortured history of conflict. Last July, he went there for three weeks, a period, he says, that came in retrospect to feel "close to the fulcrum of history, a time when all things, all the possible futures, were still in the balance": It had been just seven years since Anastasio Somoza Debayle's departure and the takeover by the Sandinists. The International Court of Justice in The Hague had ruled that U.S. aid to the contras was in violation of international law; the House of Representatives had, meanwhile, approved President Ronald Reagan's request for \$100 million in aid for the counterrevolutionaries; and the Sandinist government had closed down La Prensa, the country's one op-

position newspaper.

As Rushdie quickly points out, he did not go to Nicaragua as "a blank slate." His experience as "the child of a successful revolt against a great power," he says, predisposed him to feel sympathy with the Sandinist regime — he shared with them, he writes, "some awareness of the view from underneath, and of how it felt to he there, on the bottom, looking up at the descending heel." But at the same time, he

adds, "I was familiar with the tendency of revolutions to go wrong, to devour their children, to become the thing they had been created and to destroy." Indeed, one of the central monifs in "Midnight's Children" was the foundaring of India's bright dream of independence during the repressive state of emergency imposed by Prime Minister Indira Gandhi in 1975.

While he speaks with the president of Nicaragua, Daniel Ortega Saavedra, interviews Violeta Chamorro, the widow of the fermer editor of La Prensa, Pedro Joaquin Chamorro, and questions other prominent Nicaraguans about everything from the possibility of U.S. military intervention to the ethics of press censorship, Rushdie's political musings tend to sound for perficial - and sometimes naive. He accepts without serious questioning or research the figures quoted to him by the Sandinists on land redistribution and yet asks members of this constitutional committee why the right to abortion on demand cannot be included in the new constitution of this deeply Roman Cathohe country.

Where "The Jaguar Smile" is stirring and original is in its descriptions of the country and the people. Though the book lacks the melding of subject and sensibility found in Joan Di-dion's "Salvador," though it lacks the verbal energy of Rushdie's fiction, it has been written

with a novelist's eye for irony and metaphor.
Rushdie notices "the Nicaraguan fondness. for naming their ministries acronymically can result in unfortunate Orwellian echoes (the Ministry of Culture, for one, is known as "Minicult"). He notices that farm cooperatives tend to possess "resolutely optimistic names ("La Esperanza," "La Paz"). And he notices that American culture has a firm foothold many Nicaragua: old Jack Nicholson movies run on television and Madonna songs play on the

As a piece of reportage. "The Jaguar Smile," obviously does without the more extravagint flashes of surrealism found in "Midnight's Children" and "Shame," but Rushdie's point that history is a kind of nightnare, full of distortions and absurding distortions and absurdities - is not lost on Nicaragna. Indeed, he is able to make us see that the factual reality of this country already verges on the surreal: a country in which newspapers (under the Somoza regime) printed photographs of Manlyn Monroe and other Hollywood movie stars in place of the banned articles," a country in which 19-year-old soldiers can he veterans of six years lighting, a country in which a tree across the road becomes an ominous and frightening sight.

Buggin, was seriously injured after being attacked by a group of lans from visiting Avellino and was in intensive care with head injuries. In Turin, about 100 Fiorentina

fans went on a rampage after their team lost, 1-0, to Juventus. They attacked a police vehicle, smashed windows and left one police officer with a serious eye injury, then broke shop windows and wreaked havoc at the Turin train station. In Rome, after the second division game between local side Lazio for what a spokesman, Rob Brons, and Pescara, six of the home team's Many of the injured were taken with police. There also was trouble

After 100 baton-wielding riot police failed to halt the fighting during the first half of the match, referret Henk was Fred and the match, referret Henk was Fred and the match, referret Henk was Fred and the match and the first division match against Barrier Bar division match against Bayern Munich. The arrests followed pitched battles in the center of Munich in which the visiting fans, many of whom had been drinking, attacked a group of local supporters.

In Africa, in the Guinean capital of Conakry, the trouble came on the field during a stormy zone-two semifinal between Guinea and Senegal in the tournament of the Supreme Council for Sport in Africa.

Three players were sent off, seven were shown the yellow card and nine minutes were lost to fights. referee blew the final whistle four minutes early. (AP, UPI, AFP) ■ Norway to Try Shoot-Outs

Norwegian soccer authorities, in an attempt to halt declining attendance, have decided to rule out tied matches, Agence-France Press reported from Oslo. From now on all matches that,

after 90 minutes, have failed to decide a winner will be settled by will be awarded to winning clubs, as in England, but a team that wins on penalty shots will get only two points. The loser in the sudden death shoot-out will get no points.

Attendances at Norwegian soccer matches have declined sharply over the last few years and in 1986, for the first time in its history, the Norwegian Football Federation produced a deficit, of several million kroner. The new system will be on trial for one year.

Riot police charged spectators, one of whom lay injured on a twisted barrier, during the soccer match Sunday in The Hague between FC Den Haag and Ajax of Amsterdam.

# Canadian Boileau Wins Marathon nine minutes were lost to fights. Guinea won the match, 1-0, after the As 1.4 Million Cheer 15,000 in L.A.

Compiled by Our Staff From Dispatches LOS ANGELES - Art Boileau of Canada led most of the way Sunday and won the second Los Angeles Marathon, which drew a field of 14,937 runners from 47 states and 31 countries plus crowds along the streets estimated at 1.4 million.

Boilean, 29, completed the 26.2mile (42.4-kilometer) course in 2 hours, 13 minutes, 8 seconds, Defending champion Ric Sayre, 33, of Ashland, Oregon, finished second in 2:13:38, with José Gómez, 30, of Mexico third in 2:14:31.

Nancy Ditz of Woodside, Califor the second time, clocked in 2:35:24. Sylvia Mosqueda of Los Angeles was second in 2:37:46. with Maria Trujillo of Mexico third in 2:39:50.

Boileau, who ran a personal best of 2:11:15 when he finished second

in the 1986 Boston Marathon, largely black sections of mid-Los moved to the front just before the halfway point and opened nearly a half-minute lead over Gomez during the next four miles.

With five miles left, Boileau had extended his lead to almost two minutes over Gómez, with Sayre another half-minnte behind. Sayre gained on Boileau through the final three minutes, but could not make up the needed ground.

Sayre said the heat, which reached the mid-70s during the race, slowed his closing kick, "The last couple of miles," he said, "it fornia, won the women's division affected me. It was a little tougher catching people."
The marathon course traveled

through the city's diverse ethnic neighborhoods. Runners weaved through Little Tokyo, Chinatown, Koreatown, mostly Hispanic Echo Park, white Hancock Park and vendor said.

Angeles, before returning to finish in the Coliseum, the site of the 1984 Olympic Games. The beautiful day turned the

marathon into as much an event as

an endurance test. Serious runners ran. Less serious runners jogged. Serious bystanders partied. Less serious bystanders simply watched the running and

the partying. Gypsy Boots, self-described nature boy of Southern California, banged a tambourine and a cov bell as he ran the race and saluted bystanders who recognized him from cheerleading at haseball Dodger, basketball Laker and football Raider games.

"I believe jogging is safer than

# Illini Finally Win Close Game With Upset of No. 3 Indiana

CHAMPAIGN, Illinnis -Third-ranked Indiana University was upset Sunday by No. 14 Illi-nois, 69-67, and fell out of a tie with Purdue for first place in the Big Ten Conference.

The Illini, 21-7 overall and 11-5 in the Big Ten, had lost five close games - three in overtime - to Indiana, Purdue and Iowa this season. They had led Iowa by 22 points and Purdue by 16 before losing those games at home, and

were determined not to do so again. "We really wanted to beat one of top teams in the Big Ten," said senior Ken Norman, whose 24 points led the Illini. "We hung in there for 40 minutes and we got a victory."

There was a time when they started to come back. And I just said, They're not going to come back,' said senior Doug Altenberger.

Reserve center Jens Kujawa gave the Illini their margin of victory with a book shot and two free throws in the last two minutes of the game. The 7-foot (2.13-meter) sophomore sank the hook shot with 2:31 left, then his free throws with 1:47 to play made it 69-65.

The Hoosiers, 23-4 and 14-3 with one conference game left, had two chances to tie in the final seconds. But Steve Alford missed hoth shots, one a 20-footer as the 45second shot clock expired and the next a halfcourt heave that was blocked by Steve Bardo as the game clock ran out.

Indiana's coach, Boh Knight, had called a timeout to set up a three-point field goal attempt by Alford on the first possession, but the Illini defense forced Alford to take an off-balance shot with six seconds to play. Bardo was fouled on the rebound and missed a free throw with four seconds left, but blocked Alford's desperation shot.

"It was a well-played, well-officiated game, I thought it was the best-nfficiated game I saw all year," Knight said. "Norman was exceptionally good in the last 10 minutes of the half. He played about as good as a kid can play."

Altenberger, who made 6 of 10 three-point shots, finished with 20 points. Indiana was led by Keith Smart's 19, the last two coming on a dunk that made it 69-67.

Nevada-Las Vegas 70, Fresno State 59: In Fresno, California, Arsex," the 76-year-old organic-fruit mon Gilliam got a game-high 21 vendor said. (AP, UPI) points and 7 rebounds as No. 1-

ranked UNLV improved to 30-1 overall and 18-0 in the Pacific Coast Athletic Association. Rebel guard Mark Wade got 12 assists to increase his season total to 328, tying the NCAA record set last year by St. John's guard Mark Jackson.

North Carolina 92, Georgia Tech 76: In Atlanta, Kenny Smith scored 20 points as the No. 2 Tar Heels became the seventh team to finish an Atlantic Coast Conference season unbeaten. The Tar Heels, 27-2 overall, have a 14-0 ACC mark, joining the 1957 and 1984 Carolina squads with perfect records.

Temple 77, George Washington 69: In Philadelphia, Nate Blackwell scored 26 points and Tim Perry 17 as the No. 4 Owls won a quarterfinal same of the Atlantic 10 Conference tournament.

Kentucky 75, Oklahoma 74: In Lexington, Kentucky, Richard Madison's lay-up with eight sec-onds left gave No. 12 Oklahoma its third straight final-seconds defeat. Marshell 66, Davidson 64: In

Henderson tipped in a missed shot with one second left in overtime to give Marshall the Southern Conference championship and a berth in the NCAA tournament. Henderson, a junior, scored a game-high 22 points, 6 in overtime.

Virginia 82, Maryland 77: In Charlottesville, Virginia, John Johnson scored 23 points for the Cavaliers and the Terrapins, a perennial ACC powerhouse before the shake-up that followed star Len Bias's cocaine-induced death, finished a winless league season with their 14th straight loss.

Fairfield 65, Army 60: In East Rutherford, New Jersey, Kevin Honston, the top U.S. college scorer, twisted his knee late in the Metro Atlantic Athletic Conference tournament semifinal game after leaping into the air to protest an offensive goaltending call on a teammate and the Cadets did not score another point as Fairfield rallied from a seven-point deficit.

Houston had 28 points when he

injured himself.

### Celtics Win 2,000th Game

BOSTON - The Boston Celtics beat the Detroit Pistons, 112-102, Sunday night to become the first team to win 2,000 regular season games in the National Baskethall Association.

Only the Harlem Globetrotters among professional basketball teams —and they mostly play exhibition games against a team paid to

With Kevin McHale scoring his season high, 38 points, the Celtics won their 10th straight against the Pistons at Boston Garden, dating back to Dec. 19, 1982, and improved the franchise's regular-season record to 2,000-1,125. Including playoff games, Boston's victories

The Celtics won their first NBA game in 1946 against the Toronto Huskies, but did not come by their 2,000th victory easily. Larry Bird, who had 19 points in the first half, thereafter was held to one basket and

two free throws. As the fourth period began, the score was 85-85.

Celtic reserve guard Jerry Sichting made two straight jumpers to open that quarter and the Celtics never trailed again, although guard innie Johnson put the Pistons within three points of the Celtics with 8 of his 17 points midway through the period.

But when it became 98-95, Dennis Johnson banked in a shot off the glass and McHale, who scored 14 points that quarter, followed with a ump hook that increased the lead to 102-95. That end Detroit's threat. "Sometimes you have one of those nights where you feel good and the basket looks like the ocean," said McHale. "Other times, it looks

like a pea. The Celtics' coach, K.C. Jones, said, "It's been a long green line. Red Anerbach, Bill Russell, Frank Ramsey, Bob Cousy, Sam Jones, Dave Cowens and up to Larry Bird and Robert Parish. They're the reasons it's been a long green line.

Teams come after you year after year, but we've managed to

# ART BUCHWALD

# Favn and Ollie, the Film

Washington — The pro-ducer came into my office and threw the script down in disgust. "It doesn't work." he said. "Who is going to believe the name Ollie

in the White House?" "I got the name from Laurel and

for a Marine Corps hero who works

Hardy. It sounded different." "And Fawn. You want me to think there is a beautiful loog-

legged girl named Fawn who is involved with a bunch of cowboys in the National Security Council?"
"We need

some sex appeal.

You're not going to gel men turned on from Buchwald John Poindexter stuffing tobacco in his pipe," ) told

The producer said, "Look, I hired you to write a movie about a president of the United States who used to be a movie star and becomes one of the greatest communicators in history until one day he forgets where he parked his car. The story line is simple. While the president is shaking hands with iceland freedom fighters in the Rose Garden, his staff is stealing everything that is not bolted down in the White House, I don't see that in these pages. I want mure sleaze and slime.

I said. "I have to flesh out the characters before I develop it. To begin with, I don't know what to do with Ollie's friend whn flies all the arms to Iran. The scene as it plays now is flat, even when he is met by three ayatollahs and they hold hands and dance around the control tower.

"Why can't you have Fawn have a drink with Bud at the Tehran airport bar as the piano player

#### France Gets a Monet The Associated Press

PARIS - A large section of a three-part painting by Claude Monet has been given to France in payment of death duties and will go on display at the Orsay Museum. The painting. "Le Déjeuner sur l'herbe," is a takeoff on Edouard Manet's "Le Déjeuner sur l'herbe."

sings 'As Time Goes By ?" the producer said.

"What would she be doing at the airport in Tehran?" She's waiting for Ollie, who she

thought was on the plane."
"But Ollie isn't on the plane. He's speaking at a contra fundraiser in Dallas. What does Fawn do wheo Ollie doesn't show up?" I protested

"She flies back to Washington and makes out more travel vouchers for Ollie." "What is Mr. Reagan doing?"

"He's trying to remember what he was doing on the day he was sworn in as the 40th president of the United States."

I shook my head. "I don't know if I can write this. It's believable and at the same time there are holes in it. For example, I'd like to work the CIA into it, but I haven't figured out if they are on our side or

The producer said. "Write that at the beginning they're on our side and then later on in the picture they wind up on their side."

"I have some good business in the film. The first thing I'm going to have Ollie do is declare war on Panama and nuke the canal. Then I want him to personally take a U.S. atomic submarine up the Neva River and shell Leningrad. After that 1 have him going to France and kidnaping the entire French parliament. Then he flies in a hang glider and carpet bombs the Philippines with Imelda Marcos's shoes.

The producer said. "It's not bad. Can't you get him to assassinate somebody? "I don't want Ollie to do any-

thing that's against the law because he's the national hero in my pic-

"The movie is shaping up." the producer said. "Have you got any-thing in the script about Ollie taking the Fifth Amendment?"

"With all the things I have him doing — he doesn't have time to take the Fifth." "One more question," the producer said. "Where is Fawn while Ollie is making mischief around the

"I have ber doing what any American woman would do. She's bome shredding papers for her

# The Claudio Abbado Touch in Vienna

By Paul Hofmann New York Times Service

VIENNA — when Vienna Abbado leads the Vienna TIENNA - When Claudio Philharmonic in an all-Beethoven cycle at Carnegie Hall beginning Friday, an old-fashioned wristwatch may peep out from under his sleeve. It was given to him by Erich Kleiber, the late Viennaborn conductor who was a champion of modern music but was admired also for his interpretations of the classical and romantic repertory. The good-luck charm is a symbol of the Italian maestro's closeness to the Central European

music tradition. Now 53 years old, Abbado has been working with the Vienna Philharmonic for many years; six months ago he took over as music director of the Vienna State Op-era. The busy players of the Philharmonic, a self-governing concert organization, also play in the

pit of the renowned opera house.
"It's a fabulous orchestra," Abbado told a visitor recently. "It can do anything." The maestro was pacing an office in the east wing of the State Opera building. wearing the brown cardigan that

he fancies for rehearsal work. How would he rate the Vienna Philharmonic as compared, say, with Herbert von Karajan's Berlin Philharmonic? He shook his boyish mop of black hair and said diplomatically: "The two orches-tras are tops in Europe, no doubt about it. I couldn't say which one is number one. Each one has its own distinct personality."

Four blocks from the State Opera in the revival-Renaissance palace of the Society of the Friends of Music, the president of the Vienna Philharmonic, Alfred Altenburger, repaid the compliment. "We have loved Abbado before and we love him now that we are cooperating with him so intimately. He has studied in Vienna, he is no foreigner to us. We Viennese imhibe Italian culture with our mothers' milk."

The Vienna Philharmonic is an independent, self-governing body that has no permanent conductor. It invites outstanding figures of the international music scene to lead it in one or more of its concerts or in recording sessions. Under its long-term contract with the Vienna State Opera, the Philharmonic's musicians are under the jurisdiction of the house's management whenever it is staffing the orchestra pit.

Altenburger, a first violinist, praised Abbado's way of conducting. "He has a very precise, suggestive beat," he said. "He knows how to motivate the orchestra. He communicates well, and it belps that his German is very good."

Abbado himself says that orchestras generally don't like conductors who talk much. "In our profession, gestures and especially eye language are essential," he explains. "Furthermore, it is indispensable to know the score perfectly and be familiar with the life, the works and the entire era of the composer."

Soon after the current world tour, Abbado will start rehearsals for a new production of Alban Berg's "Wozzeck," to open at the State Opera on June 12 The Italian maestro asked for a "Wozzeck" early on in his five-year tenure. "I feel much affinity with Berg and the Vienna school of modern music," he says.

Alban Berg, a native Viennese, composed much of "Wozzeck" during World War I, but the work had its premiere only in 1925, when Erich Kleiber presented it in Berlin. Berg was a disciple of Arnold Schoenberg, the Viennese who developed the 12-tone technique; another Schoenberg pupil, Hans Swarowsky, was Abbado's teacher at the Vienna Music Academy. The young Italian had gone to Vienna after attending the Giuseppe Verdi Conservatory in his native Milan. That institution is now headed by his older brother, Marcello Abbado, a pianist. Their father, Michelangelo Abbado, was an well known vio-

One of the future maestro's fellow students in Swarowsky's elite class was Zubin Mehta. As Abbado tells it, the two of them enrolled in the academy chorus to watch the great conductors of that time, such as Bruno Walter, at

At his office, Abbado was reminiscing about how Vienna looked when he was learning under Swarowsky to lead a big orchestra himself: That was 1956-58. The city was gray, and there seemed to be

Conductor Claudio Abbado: "I feel much affinity with Berg and the Vienna school of modern music."

only old people around then. cope with both the ansical tasks Now Vienna has spruced itself up, it's full of vivid colors, it's lively and cosmopolitan. There are plenty of young people who are interested in the arts. I love it

When the maestro walks from his rented apartment at Neuer Markt, a square close to the State Opera, to his office, quite a few passers-by salute. Whenever he strides into the orchestra pit to start an overture be gets an ovation from the audience.

Under his State Opera contract, Abbado is to spend at least six months every season in Vienna, where he serves also as a consultant to the Austrian government's culture minister. At the opera house he is concerned only with artistic affairs, while administrative matters are handled by the new director, Claus Helmut

The Dress-Abbado team fol-lows Lorin Mazzel, who tried to for myself to study, think, read.

and administrative posts at the State Opera. The American conductor soon found himself embroiled in the Viennese bureaucracy and its intrigues, which are legendary and have prompted op-era directors from Mahler to Karajan to walk out and slam the door. He resigned in April 1984, two years before his contract was due to expire.

When Ahbado was asked about his State Opera experiences so far, he said: "They are very good. The situation with Drese, the general manager, is ideal: he takes care of all the administration detail, and I concentrate on the music."

The Italian maestro must nevertheless have had an inkling that he was facing a dannting chal-lenge in Vienna. After signing the contract, he went into seclusion, and his friends would only say be was somewhere in Switzerland. Now, Abbado explains: "I have

For six months Abbado disappeared in the mountains. Six months devoted to myself."

Before moving to Vienna, Abbado served for several years as musical director of La Scala in Milan and lately has built its orchestra into a body that has stepped up its concert activity. The Vienna Philharmonic was the avowed model. Abbado's successor at La Scala Opera House is Riccardo Muni, the 46-year-old Neapolitan who is also music director of the Philadelphia Orchestra.

As music chief of the State Opera, Abbado will have continuous dealings with the Vienna Philharmonic. He has already recorded the nine Beethoven symphonies with the Vienna orchestra for Deutsche Grammophon. He also plans to conduct the Berlin Philharmonic and other orchestras in various concerts and recordings during his months away from Vienna. Before his present visit to the United States, he flew to Israel to lead the Israeli Philharmonic in Mahler's Ninth Symphony.

Abbado has pledged to conduct operas only with the Vienna ensemble at its home and in guest appearances in Salzburg, Berlin, Milan and Tokyo during the next few years. The Vienna operagoers see Abbado at the podium on 25 evenings this season.

One of Abbado's Vienna projects is the creation of a Gustav Mahler Orchestra, to be composed of young musicians from Austria, Czechoslovakia, Hungary and, possibly, East Germany, Anditions have already been held, and a first concert tour later this year is scheduled to include performances in Vienna, Graz, Linz, Budapest, Bratislava and Prague We have established the necessary contacts with the culture authorities of the countries concerned," Abbado says. "These are things that can be done from Vi-

And then, there is Mozart. Vienna, and especially the Philhar-monic, and the State Opera will pull ont all stops in 1991 to mark the 200th anniversary of his death in a house three blocks from where Abbado now lives. His next few years will increasingly he taken up by preparations for the Mozart bicentenary.

Lady Macbeth Role Eng. With Boos, Jeers in Rom

Shirley Verreit's Rome debut to Lady Macbeth ended in boos and jeers after she was forced to quit in spectators showing for their money back. Verrett had skipped the opening performance last week of Verde's "Macbeth" due to a case of tracheitis, or inflammation of the lower part of the throat. Before the start of Sunday's performance in the start of Sunday in the star Verrett was still not completely re-covered but would go ahead with the performance. But it was clear from the start that Verrett was in poor form, singing some notes octave down, newspapers reported. When the andience grew boster ous, the conductor Gluseppe Patane stopped the show and called for quiet. The opera resumed but after Verrett struggled through her duet with the bestiment through her after Verrett struggled through her duet with the baritone Renate Brason, the audience projected again and the show was canceled. 0 \*\*

Cybil Shepherd, 37, married Dr. Bruce Oppenheim, 38, Sunday in a civil czemony at Encino, Califor, nia, and announced to the wedding guests that she expects to give birth to twins in October. It's her second marriage. Card Edward was Bismarck, 26, a stockbroker and the great-grandson of Germany Iron Chancellor, Otto was Bismarck, and Laura Martinez Her. In 1997, and Laura Martinez Her.
